Non-Executive Director

Technology materials development company, **Talga Resources Ltd** (ASX: TLG) ("Talga" or "the Company") is pleased to announce the appointment of Mr Peter Bartsch as Manager - Metallurgy. Mr Bartsch will lead Talga's process design and development internationally as the Company moves to rapidly expand its technology team for commissioning of Talga's German graphene demonstration plant and subsequent full-scale production in Sweden. Mr Bartsch will initially be based near Rudolstadt, central Germany.

Mr Bartsch's professional capability has spanned process studies and investigation, analytical and metallurgical laboratories, including technology leadership of innovative mineral processes and equipment. He is a Member of AusIMM, a committee member of Metallurgical Society and a Certified Practising Metallurgist who has over 38 year's experience in metal extraction and minerals processing industries.

Mr Bartsch's track record covers all levels of metallurgical businesses and his extensive experience includes plant design, as well as hydro and electro-metallurgical technology development, engineering management and process development through test-work and pilot plants, and ultimately commissioning and ramp-up of commercial facilities.

Talga Managing Director, Mark Thompson commented *"We are delighted to welcome Peter to the management team. His mix of skills, extensive experience and familiarity with both the mineral graphite and Germany as a country is perfect for Talga. We look forward to utilising his experience in relation to immediate demonstration plant objectives and ultimately to full-scale processing of the Company's uniquely high-grade graphite assets into high-value graphene and graphite products."*

About Talga

Talga Resources Limited ("Talga") (ASX: TLG) is a Perth headquartered high tech materials company with its own source of integrated supply from multiple advanced and high grade graphite projects in northern Sweden. The flagship project "Vittangi" is at development stage and like the rest of the projects, it benefits from established high quality infrastructure in Sweden including proximity to grid power, road, rail and ports.

Two of the five graphite projects have unique ore that allows graphite and graphene to be liberated at an atomic level in a ground breaking and extremely cost effective way. The graphene produced is of a high quality and suitable for a range of large volume composite and additive applications as well as high technology applications.

Talga's legacy non graphite assets in Sweden and Australia, including a cobalt-rich IOCG deposit, are all to be commercialised to provide funds for the core graphite projects.
