ASX ANNOUNCEMENT

LITHIUM AUSTRALIA'S SILEACH™ PROCESS PART OF A SUSTAINABLE LITHIUM BATTERY FUTURE

On the 24 and 25 of May 2016, IDC Technologies will host the Lithium Battery Conference in Sydney, Australia. The managing director of Lithium Australia NL will present his views on critical issues in supply chain for battery raw materials. The Sileach™ process provides a low-cost alternative to the conventional processing of spodumene, the hard rock feed material for the lithium chemical industry.

Not only does the Sileach™ process provide a low-cost alternative to the expensive roasting processes used conventionally, but it provides the ability to bypass the third party “converters” and the ability to supply directly from the mine site to the end user in the battery industry.

A full copy of the paper being presented at the Lithium Battery Conference can be viewed on the Lithium Australia website <http://lithium-au.com/>

About Lithium Australia NL

LIT is a dedicated developer of disruptive lithium extraction technologies including the versatile Sileach™ process which is capable of recovering lithium from any silicate minerals. LIT has strategic alliances with a number of companies, potentially providing access to a diversified lithium mineral inventory globally.
