

Thomas Smeenk of Hemostemix talks about market reaction to successful litigation settlement

In this InvestorIntel interview with host Stephen Lautens, Hemostemix Inc.'s (TSXV: HEM | OTCQB: HMTXF) Co-Founder, President and CEO Thomas Smeenk talks about Hemostemix achieving a major milestone this week by announcing it had successfully settled all litigation regarding its ownership of its intellectual property and the market's immediate positive reaction.

In the interview, which can also be viewed in full on the InvestorIntel YouTube channel ([click here](#)), Thomas Smeenk talks about Hemostemix's portfolio of autologous stem cell therapies that uses patient's own blood to save limbs from amputation, treat heart diseases and other conditions of ischemia. With 91 patents issued worldwide, Thomas says that with the successful return of all of its intellectual property and clinical trial data, Hemostemix is now cleared to continue to move forward with its promising therapies.

About Hemostemix Inc.

Hemostemix is a publicly traded autologous stem cell therapy company, founded in 2003. A winner of the World Economic Forum Technology Pioneer Award, the Company developed and has published seven peer reviewed articles about the safety and efficacy of its lead product ACP-01 as a treatment of CLI, PAD, Angina, Ischemic Cardiomyopathy, Dilated Cardiomyopathy and other conditions of ischemia. ACP-01 has been used to

treat over 300 patients, and it is the subject of a randomized, placebo-controlled, double blind trial of its safety and efficacy in patients with advanced critical limb ischemia who have exhausted all other options to save their limb from amputation.

On October 21, 2019, the Company announced the results from its Phase II CLI trial abstract presentation entitled “Autologous Stem Cell Treatment for CLI Patients with No Revascularization Options: An Update of the Hemostemix ACP-01 Trial With 4.5 Year Follow-up” which noted healing of ulcers and resolution of ischemic rest pain occurred in 83% of patients, with outcomes maintained for up to 4.5 years.

The Company owns 91 patents across five patent families titled: Regulating Stem Cells, In Vitro Techniques for use with Stem Cells, Production from Blood of Cells of Neural Lineage, and Automated Cell Therapy.

Hemostemix's stem cell therapy pursues 'Your Fountain of Youth'

What's a company worth to investors that could improve numerous medical conditions related to ischemia (lack of blood flow) and tissue damage, and potentially improve the quality of life? It would be hard to put a price on such a company if they could successfully commercialize or license their product or technology.

Today's company, Hemostemix Inc. (TSXV: HEM | OTCQB: HMTXF | FSE: 2VF0), is having remarkable success, yet due to its early

stage has a market cap of only C\$19 million. That company is developing methods that use our own bodies' stem cells to heal certain diseases. The key diseases of focus for now are those revolving around ischemia, such as heart disease, stroke, and diabetic vascular disease and its complications such as limb loss. Over the next year, there will also be a lot of work done on nerve cell regeneration.

Hemostemix Inc. is developing 'stem cell therapy' for the treatment of ischemic disease and several other diseases. Hemostemix owns 91 patents across five patent families titled: Regulating Stem Cells, In Vitro Techniques for use with Stem Cells, Production from Blood of Cells of Neural Lineage, and Automated Cell Therapy.

Results to date have been outstanding, as shown in the image below.

Before and 47 days after Hemostemix's ACP-01 treatment

Source: Hemostemix company presentation

Hemostemix summary of the business and ACP-01

ACP-01 is Hemostemix's pioneering first stem cell treatment called angiogenic cell precursor ("ACP"). Hemostemix states: "ACP-01 has been used to treat over 300 patients, and it is the subject of a randomized, placebo-controlled, double-blind trial of its safety and efficacy in patients with advanced critical limb ischemia who have exhausted all other options to save their limb from amputation. On October 21, 2019, the Company announced the results from its Phase II CLI trial abstract presentation entitled "Autologous Stem Cell Treatment for CLI Patients with No Revascularization Options: An Update of the Hemostemix ACP-01 Trial With 4.5 Year Follow-up" which noted **healing of ulcers and resolution of ischemic rest pain occurred in 83% of patients, with outcomes maintained for up to 4.5 years.**"

Note: Bold emphasis by the author.

Hemostemix business model summary

Our Business Model and Vision

Leveraging your stem cells to Regain or Maintain your Quality of Life is the Gold Standard of Health

At \$5,000 per Treatment (\$2,500 COGS) Hemostemix scales to 4,000 shipments per month, to become the #1 Provider in the fresh autologous Stem Cell space.

Leveraging the Stem Cells in Our Blood to treat Our Heart, save Our Limb from amputation, overcome Chronic Pain, maintain our Quality of Life, is HEM's global business opportunity.

HEMOSTEMIX

Source: Hemostemix company presentation

With such stunning success, it is little wonder that Hemostemix is very keen to protect their intellectual property.

On February 14, 2022 Hemostemix announced that they had “been granted International Trademark Registration No. 1624069 for **Your Fountain of Youth**, a registration that is valid for a period of 10 years.” Hemostemix further announced on March 23, 2022 that it had resolved outstanding litigation with a settlement agreement that requires the other parties to return all data and intellectual property in relation to ACP-01 in their possession to Hemostemix.

This is a great outcome for Hemostemix and good news to investors, as the Company believes their ACP-01 intellectual property is incredibly valuable.

Hemostemix has previously published numerous other studies proving the benefit of ACP-01, notably in the treatment of ischemia in various parts of the body. Some examples include improving ischemic cardiomyopathy patients and limb ischemia patients.

Hemostemix’s strong product pipeline and applicable diseases

Candidate	Indication	Preclinical	Phase I	Phase 2	Status
ACP-01 + U of A Islet Cells	Type 1 Diabetes				Lead Clinical-Stage Product Candidate
ACP-01	Critical Limb Ischemia				Safety Trials COMPLETED in Multiple Indications
	PAD				
	Angina Pectoris				
	Ischemic Cardiomyopathy				
	Dilated Cardiomyopathy				
	Congestive Heart Failure				
	Vascular Dementia				
	Ischemic Renal Disease				
NCP-01	Spinal Cord Injury				R&D
	Retinitis				
	Amyotrophic Lateral Sclerosis (ALS)				
CCP-01	Hypertrophic cardiomyopathy				R&D
	Acute MI				

Source: Hemostemix company presentation

Note: NCP stands for Nerve Cell Precursor. CCP stands for

Cardiac Cell Precursor. These are cultivated from the patient's own stem cells using Hemostemix's patented technologies.

What's next for Hemostemix?

Apart from further studies, Hemostemix is now looking towards automating production, partnering and commercialization. The goal of improving stem cell production will help lower costs and potentially expand the business. Hemostemix also intends to advance their business development plans including possible licensing of their technology.

To help fund the above, Hemostemix recently announced a \$2,750,000 Convertible Debenture offering.

Closing remarks

Hemostemix's longer-term goal is to support a higher quality of life for all of us, a veritable "fountain of youth", where we could boost our health yearly with our own stem cells to help repair our bodies.

Hemostemix trades on a market cap of C\$19 million. Risk remains high due to the early stage, however there is truly blue sky potential if the Company can successfully license or commercialize their products in future years.

Thomas Smeenk on Hemostemix products for Your Fountain of

Youth

In a recent InvestorIntel interview, Tracy Weslosky spoke with Thomas Smeenk, Co-Founder, President and CEO of Hemostemix Inc. (TSXV: HEM | OTCQB: HMTXF) about Hemostemix's recent "blockbuster" news release on collaborating with world famous Dr. James Shapiro to Treat Type 1 Diabetes and about trademarking "Your Fountain of Youth".

In this InvestorIntel interview, which may also be viewed on YouTube (click here to subscribe to the InvestorIntel Channel), Thomas Smeenk said that Dr. James Shapiro is well known and respected for creating the Edmonton Protocol for the treatment of Type 1 Diabetes. Thomas went on to provide an update on Hemostemix's technology platform that uses stem cells from a patient's own blood to treat the heart-damage following a heart attack. Providing an update on Hemostemix's recently closed oversubscribed private placement, he went on to explain how Hemostemix has found a "Fountain of Youth."

To watch the full interview, click here.

About Hemostemix Inc.

Hemostemix is a publicly traded autologous (utilizing the patient's own stem cells) stem cell therapy company, founded in 2003. A winner of the World Economic Forum Technology Pioneer Award, the Company developed and has published seven peer reviewed articles about the safety and efficacy of its lead product ACP-01 as a treatment of CLI, PAD, Angina, Ischemic Cardiomyopathy, Dilated Cardiomyopathy and other conditions of ischemia. Drolet Stock Notes on Hemostemix: Regenerating Stem Cells to Treat Diseases

Mario Drolet, President of MI3 Communications Financières Inc. (MI3), released his Drolet Stock Notes on Hemostemix Inc. (TSXV: HEM | OTCQB: HMTXF) on February 22, 2022, for exclusive distribution on InvestorIntel. Highlights include:

- Hemostemix is a clinical-stage biotechnology company focused on developing and commercializing a proprietary autologous stem cell therapy to treat ischemic diseases.
- 91 Patents issued Worldwide 5 patent families including automation of production.
- 500 treatments demonstrating success as a compassionate therapeutic of ischemic cardiomyopathy and angina, CLI, PAD, COPD, Idiopathic pulmonary hypertension, vascular dementia.
- HEM sitting on bottom, Financing in the making,

advancing research.

- Support: S2; \$ 0.13 S1; \$ 0.14 Resistance: R1; \$0.15 R2; \$0.165

Built on arguably one of the greatest medical breakthroughs of our time, Hemostemix has ‘your fountain of youth’...

Stem cell therapy is potentially one of the greatest medical breakthroughs of our time. It is truly amazing that we can use our own bodies’ stem cells to heal certain diseases. The technology is evolving, but today’s company is making great steps forward to bringing stem cell therapy to patients.

Hemostemix Inc. (TSXV: HEM | OTCQB: HMTXF | FSE: 2VF0) is a company that is developing ‘stem cell therapy’ for the treatment of ischemic (lack of blood flow) disease and several other diseases. Some examples include using the patient’s own stem cells to heal ischemic heart disease (causing angina and

heart attack), limb ischemia, vascular dementia, ischemic kidney disease, possibly diabetes, and even in some cases chronic pain. Hemostemix's stem cell therapy platform uses the patient's own blood to harvest the stem cells and uses them in a treatment that helps to restore circulation (blood flow) in damaged tissues.

How does it work?

Hemostemix explains how their stem cell therapy works by stating:

"Hemostemix's technology uses a patient's own cells to treat that patient's disease. The cornerstone of this autologous technology is a novel cell population within the blood called the **synergetic cell population** (SCP). The synergetic cell population, which can be collected from a simple blood draw, consists of progenitor and other supporting cells that are being developed for the treatment of ischemic diseases. Hemostemix's proprietary technology includes methods for collecting the synergetic cell population and manufacturing (isolation, enrichment and differentiation) a personalized regenerative therapy that can be administered to a patient within 7 days of the initial cell collection."

Hemostemix Stem Cell Therapy summary – Donate, harvest for 7 days, then use as a therapy

Source: Hemostemix website

About Hemostemix and their lead therapy ACP

Hemostemix was founded in 2003 and is a winner of the World Economic Forum Technology Pioneer Award. Hemostemix's pioneering stem cell treatment is called angiogenic cell precursor (ACP), or ACP-01 for the first one.

Hemostemix has published numerous peer reviewed clinical trials regarding the safety and efficacy of ACP-01 for the treatment of limb ischemia, peripheral arterial disease (PAD), angina, and ischemic cardiomyopathy, involving treatment of over 300 patients.

ACP-01 clinical trials history summary

ACP-01 CLINICAL EXPERIENCE TRIAL HISTORY

TYPE OF STUDY	Pilot Safety/ Feasibility	Phase 1b Safety and Efficacy	Phase 2 Safety and Efficacy	Clinical Trial Safety/ Feasibility	Safety and Efficacy	Safety and Efficacy

Case studies show that Hemostemix's stem cell therapy (named ACP) is effective

Below are just 3 of many case study results:

For example:

1. The results of the 106 subjects suffering from ischemic cardiomyopathy “[experienced] improved cardiac function (Left Ventricle Ejection Fraction), improved exercise capacity, and improved quality of life...”
2. The results of 41 subjects treated by direct injection of ACP into the heart to treat ischemic and dilated cardiomyopathy: “Overall ejection fraction improved significantly... At a mean of 180 days after injection, NYHA functional class improved significantly...subjects ...improving nearly 126 meters in walking capacity in six minutes.”
3. The 83% of subjects treated compassionately for critical limb ischemia who “... had clinically significant improvement of adequate circulation at the distal limb

for...complete healing.”

Latest news

In the latest news, Hemostemix announced on February 14 that they have trademarked the term “Your Fountain of Youth” for a period of 10 years.

In other news Hemostemix recently announced a partnership with My Next Health. My Next Health Inc. (MNH) is the world’s leading patient focused, AI-functional-medicine-based genomic medical analysis company.

Finally, an exciting piece of news from January 2022, when Hemostemix announced that they plan to combine ACP-01 with Dr. James Shapiro’s Islet Cells to treat Type 1 Diabetes. The news states: “Following technology transfer, the team will create a new product by combining the two formulations, beginning with human islets. Thereafter, the team will complete preclinical studies to demonstrate the product’s characteristics in vivo, with a plan to move forward with first-in-human testing.”

Note: The global diabetes care drugs market reached US\$69.7 billion in 2019. The global market for diabetes care products including drugs and devices is expected to exceed US\$111.2 billion by 2027.

Closing remarks

Hemostemix is at an interesting stage of development where they have spent many years proving their science and technology works, with several favorable clinical trial results. The next stage is the most exciting for investors, when the Company gets to commercialize the technology. Of course, once this starts to gain success the stock price would typically be much higher. Hemostemix states: “91 Patents. More to follow as we scale Manufacturing and R&D.”

The market for stem cell therapy to treat various diseases is

potentially huge. Just think of how many people suffer from ischemic and degenerative diseases. There may also be a market to treat diabetes if the latest Dr. Shapiro pre-clinical studies go well. If we can safely grow back healthy cells in our body to repair damaged tissue, then the potential rewards are enormous. Hemostemix gets this, as we can see from their recent trademark name – “Your Fountain of Youth”.

Hemostemix trades on a market cap of C\$8 million. Patience is required but there is huge potential for reward if Hemostemix takes off.

Thomas Smeenk with an update on the FDA Phase II clinical trial program of the Hemostemix blood-derived, stem cell therapeutics product (ACP-01)

In a recent InvestorIntel interview, Peter Clausi speaks with Thomas Smeenk, Co-Founder, President and CEO of Hemostemix Inc. (TSXV: HEM | OTC: HMTXF) about the Phase II Clinical Trial on Hemostemix’s ACP-01 which has the potential to treat patients with severe critical limb ischemia.

In this InvestorIntel interview, which may also be viewed on YouTube (click here to subscribe to the InvestorIntel Channel), Thomas went on to say that Hemostemix is in the process of completing the source document verification. With

about 60% of source documents verified, Thomas said that they expect the source document verification to be complete within the year.

Thomas Smeenk on Hemostemix's autologous stem cell therapy technology and why some call it 'the fountain of youth'

In a recent InvestorIntel interview, Tracy Weslosky spoke with Thomas Smeenk, Co-Founder, President and CEO of Hemostemix Inc. (TSXV: HEM | OTC: HMTXF), about Hemostemix's autologous stem cell therapy and why he calls the technology "the fountain of youth."

In this InvestorIntel interview, which may also be viewed on YouTube (click here to subscribe to the InvestorIntel Channel), Thomas went on to say that Hemostemix's lead product ACP-01 works by treating ischemia (lack of blood circulation) in a patient's body. The technology has already been used to treat around 500 patients suffering from ischemia in the heart, arteries, and limb. He added that using the technology many patients were able to "save their limbs from otherwise certain amputations." Hemostemix has 91 patents including a patent on the automation of production which enables the company to scale the business "exponentially" as over a million patients lose their limbs to amputation in North America alone. The technology is now in Phase 2 clinical trial.

Fully funded with strong IP Portfolio, Hemostemix marches forward towards FDA Phase II Clinical Trial Completion

Hemostemix Inc. (TSXV: HEM | OTC: HMTXF) continues to move forward with its FDA Phase II clinical trial program of its blood-derived, stem cell therapeutics product (ACP-01) at sites in the United States and Canada.

ACP-01 is being tested as a treatment for medical conditions such as Critical Limb Ischemia (CLI). CLI is a blockage in the

arteries, which reduces blood flow and oxygen in the limbs, and can cause conditions such as severe pain in the feet or toes, wounds that won't heal, and if left untreated, could result in the amputation of the affected limb.

Although ACP-01 has been used to treat over 500 patients, currently it is part of a Phase II clinical trial of its safety and efficacy in patients with advanced CLI who have exhausted all other options to save their limb from amputation.

Recently, Hemostemix announced an update on the ACP-01 clinical trial as the company believes that all follow-up visits of the enrolled trial subjects should be completed by March 31, 2021.

In the clinical trial, 65 subjects were enrolled and randomly 2/3 of the participants received ACP-01 with the other participants receiving a placebo. Once the last follow-up appointment is completed and trial data has been analyzed, the company will provide an update. We expect this information in late April or early May.

The earlier clinical trials have shown that ACP-01 is safe and effective in the treatment of CLI. The data collected will include treatment success or failure, pain, quality of life, and any adverse effects.

Signs "BREAD" Contract with Canadian Department of Foreign Affairs

In January, Hemostemix also announced it signed the Building Relationships Entrepreneurs & Dealmakers (BREAD) contract with the Department of Foreign Affairs, Trade and Development.

The BREAD agreement is a Canadian government initiative to assist high-potential, biotech-focused Canadian Small and Medium Enterprises and is designed to accelerate the growth of Canadian biotechnology companies.

The Trade Commissioner Service (TCS) department, within the Department of Foreign Affairs, helps Canadian companies grow into international markets by assessing market potential, finding qualified partners, and resolving problems.

Hemostemix is working with the TCS to source qualified partners to license ACP-01 in foreign markets including the United States, Japan, and South Korea,

Hemostemix – a Platform for Stem Cell Therapies

Hemostemix's stem cell therapy platform uses the patient's own blood to harvest the stem cells and the treatment helps to restore circulation in damaged tissues.

Advantages with Hemostemix's process include the use of blood, which is safer and less invasive than other methods, and since you are using the patient's own blood, there is no immune rejection.

ACP-01 has the potential to treat other conditions such as Angina, Ischemic & Dilated Cardiomyopathy, and Peripheral Artery Disease. Currently, Hemostemix is preparing for Phase 2 trials for the treatment of Angina and is seeking joint-venture partners to fund other Phase 2 trials.

The company is also investigating the use of ACP-01 to treat patients hospitalized with COVID-19 that exhibit low oxygen levels and significant inflammation.

Hemostemix has also developed NCP-01 (Neural Cellular Precursor) from blood with the potential to treat neurological conditions such as Alzheimer's, Amyotrophic Lateral Sclerosis ("ALS"), Parkinson's, spinal cord injuries, and stroke-related issues. NCP-01 is currently in the R&D phase and is pre-clinical.

Fully Funded for the Year

In December 2020, Hemostemix raised \$2.75 million at \$0.30 per

unit that comprised of a share and a warrant priced at \$1.00 for a period of 12 months. Proceeds from the offering are expected to be used to pay for various corporate expenses and to fund the clinical trial costs.

In addition to the cash on hand, Hemostemix has a strong intellectual property (IP) portfolio of 91 patents.

To generate some cash flow, Hemostemix plans to ramp up the revenue side of the business by reinstating its compassionate care revenue stream in the United States.

Final Thoughts

Stem cell treatments have been used for over 30 years to treat people with cancer conditions such as leukemia and lymphoma and earlier trials of Hemostemix's ACP-01 have shown positive effects in the treatment of CLI.

Factors that increase the risk of CLI include diabetes, high cholesterol levels, high blood pressure, obesity, or smoking. Unfortunately, most of these factors are increasing at an alarming rate. Treatment for these conditions has a billion-dollar market potential.

Currently, Hemostemix has a market cap of only C\$25 million with similar-sized biotech companies focusing on CLI trading much higher.

As a company shifts from FDA Phase II to Phase III clinical trials, we expect the share price and market cap to shift higher to reflect the potential of ACP-01.

Hemostemix CEO on ACP's Response to Ischemia in the Circulatory System

In a recent InvestorIntel interview, Peter Clausi speaks with Thomas Smeenk, Co-Founder, President and CEO of Hemostemix Inc. (TSXV: HEM | OTC: HMTXD), about Hemostemix's technology that uses patients own blood to treat ischemia in the circulatory system of the body.

In this InvestorIntel interview, which may also be viewed on YouTube (click here to subscribe to the InvestorIntel Channel), Thomas said, "We take blood from patient's arm. We fractionate out their stem cell from that blood." He continued, "Then we culture them and change them from a raw stem cell into an angiogenic cell precursor that is programmed to address ischemia in the circulatory system of the body. It is common in diabetics, in individuals who suffer from heart disease such as angina or ischemic cardiomyopathy, in wound care."

Thomas stated that Hemostemix has treated more than 500 patients using the technology which is now in clinical trials. He added, "The second one we patented is NCP (Neural Cellular Precursor). This is a cell that can be used to treat stroke, diseases that have nerve damage."

About Hemostemix Inc.

Hemostemix is a publicly traded autologous stem cell therapy company, founded in 2003. A winner of the World Economic Forum Technology Pioneer Award, the Company developed and is commercializing its lead product ACP-01 for the treatment of CLI, PAD, Angina, Ischemic Cardiomyopathy, Dilated

Cardiomyopathy and other conditions of ischemia. ACP-01 has been used to treat over 300 patients, and it is the subject of a randomized, placebo-controlled, double blind trial of its safety and efficacy in patients with advanced critical limb ischemia who have exhausted all other options to save their limb from amputation.

On October 21, 2019, the Company announced the results from its Phase II CLI trial abstract presentation entitled “Autologous Stem Cell Treatment for CLI Patients with No Revascularization Options: An Update of the Hemostemix ACP-01 Trial With 4.5 Year Follow-up” which noted healing of ulcers and resolution of ischemic rest pain occurred in 83% of patients, with outcomes maintained for up to 4.5 years.

The Company owns 91 patents across five patent families titled: Regulating Stem Cells, In Vitro Techniques for use with Stem Cells, Production from Blood of Cells of Neural Lineage, and Automated Cell Therapy.

Co-founder Thomas Smeenk on the benefits of Hemostemix autologous stem cell therapy

In a recent InvestorIntel interview, Peter Clausi speaks with Thomas Smeenk, Co-Founder, President and CEO of Hemostemix Inc. (TSXV: HEM | OTC: HMTXD), about using Hemostemix’s

patented autologous stem cell therapy platform to treat Ischemia and Angina with significant success in more than 500 patients.

In this InvestorIntel interview, which may also be viewed on YouTube (click here to subscribe to the InvestorIntel Channel), Thomas went on to give an introduction about the origin of the company and talked about the strong management team and well known board members. "I have come across some good technologies and put together a team that have succeeded," Thomas commented.

Thomas also provided an update on Hemostemix's ACP-01 Phase 2 Clinical Trials. ACP-01 uses a patient's own cells to restore blood flow to ischemic limbs and has the potential to treat a range of ischemic diseases.
