

Don Bubar of Avalon Advanced Materials on signing key new agreements and the high demand for lithium

written by InvestorIntel | October 5, 2022

In this InvestorIntel interview, host Tracy Weslosky talks to [Avalon Advanced Materials Inc.](#)'s (TSX: AVL | OTCQB: AVLNF) President, CEO and Director Don Bubar about the growing world demand for lithium for high strength glass ceramics, and its recent announcement that it has secured a firm commitment to purchase petalite concentrates produced at the company's Separation Rapids Lithium Project in Ontario, Canada.

In the interview, which can also be viewed in full on the InvestorIntel YouTube channel ([click here to access InvestorChannel.com](#)), Don tells Tracy that most people are aware of the growing importance of lithium in EV battery technology, but "one of the main uses from the past has always been in high strength glass ceramic products... It's actually the mineral that Corning used to invent CorningWare cookware, which was one of the first examples of high strength glass ceramic product." He goes on to say that there is increasing demand and innovative uses for other types of high strength glass ceramic products that require the high purity lithium aluminum silicate mineral petalite produced by Avalon. Don also discusses the new multi-year off-take agreement recently announced by Avalon for the delivery of petalite to a major non-Chinese international glass ceramic manufacturer.

Don also talks about Avalon being one of the three companies to sign a non-binding memorandum of understanding with LG Energy

Solution to supply them with a battery-grade lithium hydroxide starting in 2025. The MOU was signed during the visit of South Korea's President, Yoon Suk Yeol, to Canada in September. Under the terms of the MOU, Avalon would commit for an initial period of five years to provide LGES with at least 50% of its planned initial lithium hydroxide production. Don adds: "We've been getting the message out on our vision for creating the lithium battery materials refinery in Thunder Bay, and that would be an ideal location to serve the needs of companies that are now going to set up manufacturing facilities in Southern Ontario."
