

Frederick Kozak of Appia Rare Earths & Uranium talks about new REE discoveries at Alces Lake

written by InvestorNews | June 15, 2022

In this InvestorIntel interview with host Tracy Weslosky, [Appia Rare Earths & Uranium Corp.](#) (CSE: API | OTCQB: APAAF) President Frederick Kozak talks about [the discovery](#) of a significant new mineralized zone at its Alces Lake rare earths property.

In the interview, which can also be viewed in full on the InvestorIntel YouTube channel ([click here](#)), Frederick discusses how Appia's drill program identified the continuity of shallow high-grade REE mineralization at their WRCB Area with a strike length of approximately 100 metres and consistently strong assay values. The new discovery of the massive AMP Zone has revealed it is large and continuous across all of the WRCB area and open along strike. Frederick also tells InvestorIntel that Appia is currently in the middle of the largest ever drilling program at its Alces Lake property, as well as on "another project that's a kilometer and a half away that looks like something similar to the AMP Zone but much, much thicker..."

Frederick also talks about Appia's five uranium projects and their upcoming appearance at PDAC.

About Appia Rare Earths & Uranium Corp.

Appia is a Canadian publicly-listed company in the rare earth element and uranium sectors. The Company is currently focusing on delineating high-grade critical rare earth elements and gallium on the Alces Lake property, as well as exploring for high-grade uranium in the prolific Athabasca Basin on its Otherside, Loranger, North Wollaston, and Eastside properties. The Company holds the surface rights to exploration for 105,026 hectares (259,525 acres) in Saskatchewan. The Company also has a 100% interest in 12,545 hectares (31,000 acres), with rare earth element and uranium deposits over five mineralized zones in the Elliot Lake Camp, Ontario.
