

# CBLT's Clausi on Canadian cobalt and the rising battery demand for this critical metal

June 4, 2018 – “Cobalt is a critical metal as you heard yesterday, as you have seen in the news. You know it is important when Elon Musk makes fun of it. He is downplaying the need for cobalt. Even the batteries made for Tesla by Panasonic need  $4\frac{1}{2}$  kilograms of cobalt per battery.” states Peter Clausi, President, CEO and Director of CBLT Inc. (TSXV: CBLT), in a recent presentation at the 7th Annual InvestorIntel Summit – Buds, Batteries & Blockchain 2018.

**Peter Clausi:** It is always nice to be here. This is my fourth year coming to this event. Last year it was all battery metals. I tell people I meet in the industry this is one of my favorite places to come to meet people, get new ideas and see how things work. We are in the business though of making money for our shareholders. We got into the cobalt space about 2 years ago pretty much ahead of many other people. The problem is the Canadian markets did not give us or indeed any of the cobalt juniors real value for the assets that we had. If we are not going to get real value that way we came up with a better plan to generate real value. The disclaimer, has anybody ever read a disclaimer? For this conversation we are only talking about our properties in Gowganda, which is part of the Cobalt Embayment, and one of our properties in Sudbury. We have other properties in Sudbury, British Columbia and Quebec, but this conversation is only about Gowganda and our MacTrack claims in Sudbury. In Gowganda we bought 5 assets in a portfolio. We paid \$114,000 for 5 assets; roughly \$50,000 in cash, the rest in stock. Went to Australia at the end of

January, met with bankers, investment bankers, miners, promoters, financiers and began to tell our story. Australia is far more advanced than Canada and decades ahead of the United States when it comes to the recognition of capitalizing upon critical metals. Cobalt is a critical metal as you heard yesterday, as you have seen in the news. You know it is important when Elon Musk makes fun of it. He is downplaying the need for cobalt. Even the batteries made for Tesla by Panasonic need 4½ kilograms of cobalt per battery. We sold one asset. I like the dancing money. Sold one asset called Bloom Lake for \$50,000 cash and \$50,000 in stock. We had a lot of faith in that management team. That stock though has increased 700%. What we sold for \$100,000 we actually got \$400,000 of value out of for 1 asset. Remember we bought the whole portfolio for \$114,000. We then sold two other assets, again, dancing money, Corkill-Lawson and Farr for \$50,000 and \$87,000 in stock. As of this morning the stock was up over \$100,000. Again, this is one asset that is part of the portfolio of 5. Between this and the other company we are up over \$600,000. Not done yet. We then optioned off 2 of the remaining assets in Gowganda. For that, we have got more dancing money, \$20,000 for each option plus a minimum work commitment over the next year. We also get a 10% management fee. They being in Australia do not want to come to Canada to learn the system, learn the local geologist, the regional geologist, First Nations so they have asked us to run the program for them. For that we get an additional 10% management fee...to access the complete presentation, [click here](#)
