

Troy Boisjoli of Murchison Minerals talks about drill results and expanding the Barre de Fer zone

written by InvestorNews | September 21, 2022

In this InvestorIntel interview, host Tracy Weslosky talks to [Murchison Minerals Ltd.](#)'s (TSXV: MUR | OTCQB: MURMF) President, CEO, and Director Troy Boisjoli about the recent portable [x-ray fluorescence \(pXRF\) results](#) from their second diamond drill hole at its Barre de Fer zone in its HPM (Haut-Plateau de la Manicouagan) Project in Quebec.

In the interview, which can also be viewed in full on the InvestorIntel YouTube channel ([click here to access InvestorChannel.com](#)), Troy tells Tracy that this second drill hole has returned its best results to date, with a pXRF estimate 121.2 metre interval of 1.39% Ni Eq (or 4.14% Cu Eq), including 21.0 metres at 3.43% Ni Eq (or 10.25% Cu Eq). "HPM is a nickel-copper-cobalt project, Troy says, "so it's a magmatic sulfide system where the sulfide mineralization contains nickel, copper and cobalt, all of which are critical minerals the world is desperate to find."

Troy goes on to say that "what we're seeing from this hole is not only the strength and the grade profile," but also that it extends "the strike length of that strength and mineralization." He goes on to say that he feels Murchison's HPM project "certainly has camp scale potential, but what we're focused on right now is our Barre de Fer zone of mineralization." With results pending from eight more drill holes, Troy says that this is part of a larger exploration program aimed at defining a

mineral resource early next year.
