

Wealth Minerals President on hitting the lithium market full force

June 6, 2018 – “Every single brine asset in the world is visible from outer space. Everyone knows where they are. You are competing with everyone. There is no way you have a competitive advantage in terms of finding these things because everyone knows where they are. Your competitive advantage is in understanding the paradigm shift that is happening in the world first, picking a jurisdiction where you have competitive advantage and then basically hitting it with full force.” states Tim McCutcheon, President of [Wealth Minerals Ltd.](#) (TSXV: WML | OTCQX: WMLLF), in a recent presentation at the 7th Annual InvestorIntel Summit – Buds, Batteries & Blockchain 2018.

Tim McCutcheon: We will go through obviously the disclaimers and forward looking statements. The key thing about Wealth Minerals and, again, I think in the interest of time in having it be a little more focused, I have a tendency to skip around a little bit so please forgive me on that, but the idea really is to give you an understanding of what Wealth Minerals is and where we are going. The company has been around for a while obviously, but its current form in terms of being involved in the lithium space, started about 2 years ago. Market cap, anywhere between \$150 and \$170 million dollars. As I am sure you are probably aware that the volatility in the lithium market right now is quite high, lithium equity market, so things are moving all over the place. In general we are well north of a \$100 million dollar market cap, which means that we are already getting interest from institutional investors and, sort of, out of the retail space and now into the institutional space. Four lithium projects, all of them in Chile. I think the key thing that we like to present about

ourselves is, Chile as jurisdiction is a great place to be. It is a mining friendly place. It has a proven track record of over decades of being fair to investors, being stable, both on a macro level, on a fiscal level. It is not a country you go to wake up the next morning and find something horrible happened in newspapers. It is a fairly predictable place. As far as our team goes we have an unparalleled ability to operate within Chile in part because of the track record of the team. Our country manager is Marcelo Awad. He was the CEO at Antofagasta, one of the world's largest copper mining companies and he was an Executive Vice President at Codelco, which is a state mining company for Chile, obviously a major player in that country. There are a bunch of other reasons as well, but, again skipping on. As a timeline, as we just spoke about, about 2 years ago the company got started in the lithium space. Our basic idea was to put together a platform. That platform was put together in the beginning of 2016. Use that platform to acquire assets. Again, what I mentioned in the panel a little bit earlier, the lithium space, at least in where we are focused, which is South America a triangle for salars, brine assets. Every single brine asset in the world is visible from outer space. Everyone knows where they are. You are competing with everyone. There is no way you have a competitive advantage in terms of finding these things because everyone knows where they are. Your competitive advantage is in understanding the paradigm shift that is happening in the world first, picking a jurisdiction where you have competitive advantage and then basically hitting it with full force...to access the complete presentation, [click here](#)
