

InvestorIntel Week in Review for July 4-10, 2022

It's a 90-day countdown until we unveil the new InvestorIntel.com platform. Just in time for the 21st anniversary of our parent company InvestorIntel Corp. to celebrate. New Publisher and Editor in Chief Stephen Lautens will be announced, after another 3-successful month of leadership, he will be joining the Board. We will also announce Jack Lifton and Byron W King on the Board in a news release we have planned for later this week.

The Trending section of InvestorIntel.com is a treasure that I continually recommend that our audience review (link on top of the navigation bar or **click here**). Why? This shows you what others are reviewing, interested in, and/or looking to investigate further. It should not go unnoticed that rare earths, uranium, scandium (very interesting, see below), and gold lead the charge for market interest from the InvestorIntel audience last week.

You should anticipate the InvestorIntel Week in Reviews every Monday by market open. This one ran late as I – like many of you, had my day redirected as I use Rogers. Several members of the InvestorIntel team wondered what happened to me as we have an international team, and most do not use Rogers. Moving forward, I will be reviewing my home emergency kit. My wind-up radio that is 15 years old was covered in battery acid and half-melted, and I certainly need to stuff more cash in the cookie jar as many major retailers in Canada depend on Rogers as their backbone for connectivity.

Lesson learned. Enjoy your week on the market and for any questions you may have, keep them coming via our Twitter account @Investor_Intel and/or email me directly at info@investorintel.com.
