Drilling Update

Fission is also pleased to announced that core drilling has now commenced at its PLS property – host to the large, high-grade and near surface Triple R deposit – in Saskatchewan, Canada. The fully funded, 43-hole program will focus on increasing the Indicated classified resource of the Triple R deposit's R780E zone, and also upgrading to Indicated the large R840W zone ~500m west of the deposit. The R840W zone is at present substantially drilled to Inferred classification, and thus not currently included in the resource used in the prefeasibility study. Success of the planned drill program has the potential to increase the resource used in the upcoming feasibility study.
