

ThermalPass Meets Increased Demand in US Hospital Market with Walk-Through Thermal Temperature Scanning System

written by Igor Makarov | April 27, 2021

April 27, 2021 ([Source](#)) –

- *Global thermal scanners market expected to reach \$6.7 billion by 2025*
- *Many of the 6,000 + US hospitals add temperature screening to Covid-19 wellness check protocol to prevent coronavirus and other pathogen transmission*
- *CDC and FDA recommend employees be screened for symptoms for fever before starting work*

Predictiv AI Inc. (TSXV: [PAI](#)) (OTC: INOTF) (FSE: 71TA) (“**Predictiv AI**” or the “**Company**”), www.predictiv.ai, a software and solutions provider in the artificial intelligence markets, is pleased to announce it is experiencing a surge in demand and interest for its high-capacity walk-through temperature scanning system, **ThermalPass** www.thermalpass.com, from hospitals across North America who are stepping up present-day pandemic precautions to mitigate further spread of COVID-19 and its variants.

The demand precipitates the sale and installation of multiple ThermalPass systems to one of the largest and most respected hospital chains in Florida, Memorial Healthcare System (MHS). MHS chose to install ThermalPass in its south Broward County flagship medical facility in Hollywood and its Pembroke Pines medical center in an effort to add another layer of

protection for its patients and staff.

“The ThermalPass is on the cutting edge of technology and provides MHS an expeditious solution to temperature screening with incredible accuracy that is far superior to other products we considered,” said Dawn de la Vega, MSN, RN, Director of Nursing at Memorial Regional Hospital. “The system provides our doctors and staff peace of mind and eliminates human error that is inherent in a manual temperature screening process. The pandemic has challenged healthcare in many ways; as a leader, most of my time is spent removing barriers to care for the clinical staff.”

ThermalPass is an AI-assisted touchless temperature screening system that utilizes 24 thermal sensors to take up to 1,200 readings per second, yielding a contactless temperature measurement that is accurate to within $\pm 0.4^{\circ}\text{C}$ ($\pm 0.72^{\circ}\text{F}$). It also adheres to individual privacy and recommended social distancing protocols.

According to ReportLinker.com, the global thermal scanner market size is estimated to grow from US\$4.1 billion in 2020 to US\$6.7 billion by 2025. The increasing adoption of thermal temperature scanners for the screening of people possibly infected with coronavirus is one of the key factors fueling this market's growth. ThermalPass is poised for long term growth with a promising trajectory of sales potential in this market due to building a robust best-in-class channel reseller network to leverage its unique and distinctive competencies over other fever detecting devices. “We have been working around the clock and are laser-focused in meeting the needs of healthcare professionals across North America and winning in the marketplace,” said Michael Lende, CEO of Predictiv AI. “We have positioned ThermalPass to become the go-to non-contact, automatic, multi-person temperature measurement system for more

than 6,000 hospitals, medical centers and clinics around the country. It is the perfect first line of defense for both patients and staff. Our timing couldn't be better since Centers for Disease Control and Prevention (CDC) guidelines recommend that medical facilities screen caregivers, patients, and visitors upon entering the premises."

Using ThermalPass is a stress-free process for patients, visitors and hospital staff and respects the privacy of individuals since the system is not collecting or storing personal data unlike most camera-based fever detection devices.

With new COVID-19 mutations being reported every week, protecting the health and privacy is a top priority throughout the Memorial Healthcare System six-hospital network and various ancillary medical centers across South Florida. In addition to using ThermalPass, MHS is incorporating other safety measures including social distancing markers, hand sanitizers, COVID questionnaires upon entry, limited elevator occupancy, increased cleaning protocols and the closing of common area spaces.

The risk of a surge of new COVID-19 infections has by no means passed, Dr. Anthony S. Fauci, President Biden's chief medical adviser on COVID-19, warned last week. Even though more than 42% of the US population has received at least one dose of a COVID-19 vaccine, the country is seeing an increase in coronavirus cases. In the US more than 32 million people have been infected with the virus more than 572,000 lives have been lost to the disease.

Predictiv AI is not making any express or implied claims that its product has the ability to eliminate, cure, or contain the COVID-19 (or SARS-2 coronavirus) at this time.

ThermalPass is manufactured by SMRT Labs Inc., a company jointly owned by AI Labs Inc., a subsidiary of Predictiv AI Inc. and

Commersive Solutions Corp.

About Predictiv AI Inc.

Predictiv AI Inc. www.predictiv.ai is a technology company which helps businesses and organizations make smarter decisions using advanced artificial intelligence, deep machine learning and data science techniques. Its Weather Telematics Inc. subsidiary uses patented air quality monitoring sensors to provide predictive weather risk information to the insurance, logistics, fleet management and public safety sectors. The Company's R&D division, AI Labs Inc., develops new products that solve real-world business problems. The joint venture with Commersive Solutions Corp. is developing innovative technologies for use in various public spaces, starting with the ThermalPass™ fever detection system.
