

Frederick Kozak on Appia Energy's rare earths and uranium exploration program, recent financing and Jack Lifton appointment

In a recent InvestorIntel interview, Tracy Weslosky speaks with Frederick Kozak, President of Appia Energy Corp. (CSE: API | OTCQB: APAAF) about Appia's fully-funded summer rare earths and uranium exploration program plans in the prolific Athabasca Basin.

In this InvestorIntel interview, which may also be viewed on YouTube (click here to subscribe to the InvestorIntel Channel), Frederick went on to explain why there is so much industry interest in Appia Energy and explained the significance of Appia's recently closed \$5.75 million bought deal financing. Having closed the financing only a month ago on May 19th, Frederick said, "...the equity holders in the financing are looking at a great return on their investment so far." Appia recently announced the appointment of global rare earths expert, Jack Lifton, as a consultant and advisor to the Board of Directors. "If you are going to have a strategic advisor on your board of Board of Directors in the rare earths space, certainly Jack Lifton is who to have," Frederick commented.

About Appia Energy Corp.

Appia is a Canadian publicly-listed company in the rare earth element and uranium sectors. The Company is currently focusing on delineating high-grade critical rare earth elements ("REE")

on the Alces Lake property, as well as exploring for high-grade uranium in the prolific Athabasca Basin on its Loranger, North Wollaston, and Eastside properties. The Company holds the surface rights to exploration for 65,601 hectares (162,104 acres) in Saskatchewan.

The Company also has a 100% interest (subject to a 1% Uranium Production Payment Royalty and a 1% Net Smelter Return Royalty on any precious or base metals payable, provided that the price of uranium is greater than US\$130 per pound) in 12,545 hectares (31,000 acres), with rare earth element and uranium deposits over five mineralized zones in the Elliot Lake Camp, Ontario. The Camp historically produced over 300 million pounds of U_3O_8 and is the only Canadian camp that has had significant rare earth element (yttrium) production. The deposits are largely unconstrained along strike and down dip.
