

# Will Hercules be a strong asset for Bald Eagle Gold?

written by InvestorNews | February 8, 2022

I was all geared up to write a story about a junior gold miner today based on the company name but upon digging a little deeper I found that after a couple of transactions it's now a silver play. Correspondingly, I was prepared to take another stab at gold technicals and the price impact on the underlying equities. Instead, we are now talking about silver where my trading history in silver stocks is less than stellar to say the least. When silver got caught up in the Reddit meme stock frenzy, I thought I'd take advantage of the volatility by buying the underlying stocks and selling at, or even in the money covered calls for huge premiums. I collected those huge premiums but proceeded to learn a valuable lesson on how fast the liquidity in meme stocks can dry up and how hard they can fall. In fact, the silver names I participated in fell much further than where they were trading before the meme frenzy took hold leaving me well down on my overall trade, despite all the call premiums I collected. With that said, I still believe in the underlying fundamentals of the commodity itself and have confidence that as an industrial metal that is part of the technology revolution, silver will soar again. I just don't know how long I'll have to wait to get back to break even.

But enough about me, let's have a look at [Bald Eagle Gold Corp.](#) (TSXV: BIG). As noted above, the Company came into being in March, 2021 with the [completion of the qualifying transaction](#) and subsequent amalgamation of CX One Inc. and Frontera Gold Inc. This resulted in the principal asset of the Company being a 50% interest in the Hot Springs Gold project located between the Battle Mountain and Getchell Comstock Gold-Trend in north-

central Nevada. However, it didn't take long for Bald Eagle to diversify its holdings substantially when on April 26, 2021, it announced a binding letter of intent to [acquire the right and title to the Hercules Silver Property](#) located in Washington County, Idaho. The transaction to acquire the 100% interest in the [Hercules Property closed](#) on August 10<sup>th</sup> followed by the [sale of its 50% joint venture interest](#) in the Hot Springs property for US\$1.27 million in early October. And voila, Bald Eagle Gold is now a prospective silver play.

A subsequent transaction in November, 2021 resulted in the Company [acquiring a 100% interest in the Leviathan Property](#) located immediately east of and adjoining the Company's Hercules silver property in Idaho. The deal expands Bald Eagle's total land position to 2,209 acres in this highly prospective area. Which begs the question, what makes this area highly prospective? Well let me tell you.

Six mineralized areas have been identified along the 10,000 feet (3,048 metres) of Hercules rhyolite underlying the length of the Property. Following earliest drilling (1965) near the Hercules Adit, surface drilling, guided by soil geochemistry, made it clear that anomalous silver greater than one ounce per ton is widespread in the Hercules rhyolite. Between 1965 and 1988 work by eight companies resulted in thirteen drill programs and about 1,045 feet (319 metres) of lateral underground advance. The drill programs produced 28 core holes, 43 underground percussion holes and 236 reverse circulation rotary holes. Select results from the Hercules Adit Area of the Property, include:

Source: Bald Eagle Gold Corp. [website](#)

The addition of the Leviathan property provides a much larger land package of prospective ground on which to explore and

expand the currently known mineralization. Historical surface sampling indicates that the silver (+/- lead-zinc) mineralization on the Hercules Property extends onto the northern portion of Leviathan. Significant copper mineralization is also present within the volcanic rocks at surface on Leviathan, suggesting a potential porphyry copper system may be present at depth. Highlights from the Big Cut prospect located in the southeast of the property include:

The Company's stated strategy is to build precious metal resources in recognized mining-friendly jurisdictions and the Fraser Institute ranks Idaho ninth for exploration and mining investment out of 77 locations around the world. So that box is ticked. Disposition of the Hot Springs gold working interest increases the available capital pool to roughly C\$2 million to begin exploration of the Hercules/Leviathan property. With a current market cap of just over C\$10 million, a few good drill holes could make for some exciting times at Bald Eagle Gold Corp.

## Prophecy Development's John Lee on the Gibellini Vanadium Project in Nevada

written by InvestorNews | February 8, 2022

March 28, 2018 – "They are very eager to advance this project

forward. In fact the state of Nevada at the PDAC conference in Toronto just a week ago had the Gibellini project front and center on the first page of their brochure.” states John Lee, CEO and Chairman of [Prophecy Development Corp.](#) (TSX: PCY | OTCQX: PRPCF), in an interview with InvestorIntel’s Peter Clausi.

**Peter Clausi:** Last time we chatted I think was in December.

**John Lee:** Around that timeframe; 3 or 4 months ago, yes.

**Peter Clausi:** A lot has happened to the project since. First we should remind our viewers it is a vanadium project. You have three of them, but we are really talking about one of them. It is in the lovely mining friendly state of Nevada. It has some advanced permitting on it from prior owners.

**John Lee:** That is correct Peter.

**Peter Clausi:** Tell us, what is the project called?

**John Lee:** The project’s name is Gibellini. It is located just about 20 miles south of Eureka in the southern Battle Mountain region in northeastern Nevada.

**Peter Clausi:** Right. You have Battle Mountain, Florida Canyon, Mill City is that way.

**John Lee:** It is close to everywhere, but not too close to nowhere. It is a 5-hour drive from Vegas, 3-hour drive from Reno and 5-hour drive from Salt Lake City. I just recently made a trip there. I traveled from all those three different locations getting to the property.

**Peter Clausi:** What is happening at the project now?

**John Lee:** Peter when we last talked the project really has 4

competitive differentiators. The project is ideally located. According to the Fraser Institute it is one of the best places to do mining investments in North America. That has not changed.

**Peter Clausi:** Nevada it is a great jurisdiction.

**John Lee:** Yes. The price of vanadium has gone up 40% since January. Any addition to that is thanks to Donald Trump's tax policy. The corporate tax rate has dropped from 35% to 21%. The project has a feasibility study that was prepared by the previous operator and which we would expect to announce a revision. The numbers so far look very, very promising. You have a lower tax rate and higher metal prices that bode very well for the project going forward. Not to mention, I think the other thing is on the permitting, the previous operator also did extensive baseline studies. Nevada, even though it is mining friendly, but the permitting aspect is not for the faint hearted. We had a huge leg up in that baseline studies and plan of operation had been submitted and deemed accepted by the Bureau of Land and Management. I was just in Nevada. We sat down with these guys. They are very eager to advance this project forward. In fact the state of Nevada at the PDAC conference in Toronto just a week ago had the Gibellini project front and center on the first page of their brochure. We felt like the permitting side is also making some advances as well as the feasibility study, which we are looking to publish a revision very soon within the next 30 days.

**Peter Clausi:** You had some pretty good news come out today. It is the kind of news that some people will overlook and fail to understand why it is so important. Tell us about that.

**John Lee:** Even though there is doldrums in this metals market we generated a bit good volume. This morning we announced the news of our technical partnership with a company called NWME,

Northwest Nonferrous Mining Company...to access the complete interview, [click here](#)
