

Birchall on Giyani Metals' manganese milestone.

written by InvestorNews | October 22, 2018

"It is quite important milestone. It establishes the first basis of the true value of the company. It shows that we have sufficient material, probably for something like a 10-year mine life. In conjunction with that the hydrometallurgical testing shows that the process actually works for producing the key particle that we want to make, which is EMM, which is electrolytic manganese metal. That is the key metal that goes into the cathodes for battery electric vehicles and for stationary storage." States Robin Birchall, CEO & Director of [Giyani Metals Corp.](#) (TSXV: WDG), in an interview with InvestorIntel Corp. CEO Tracy Weslosky.

Tracy Weslosky: I am speaking with you where? I understand you are in Africa.

Robin Birchall: I am in Botswana just dealing with some of the stuff that we need to on the ground here at the project.

Tracy Weslosky: You just put out a news release on your maiden resource from your K.Hill project. Can you tell us a little bit more about what is happening with Giyani Metals and what you were trying to say?

Robin Birchall: It is quite important milestone. It establishes the first basis of the true value of the company. It shows that we have sufficient material, probably for something like a 10-year mine life. In conjunction with that the hydrometallurgical testing shows that the process actually works for producing the key particle that we want to make, which is EMM, which is electrolytic manganese metal. That is the key metal that goes

into the cathodes for battery electric vehicles and for stationary storage.

Tracy Weslosky: It is my understanding that the results will now allow you to proceed with your PEA. Is that correct?

Robin Birchall: Yeah, that is right. We are going to start with that as soon as possible. We have some calls on Friday with the team. We have 3 or 4 quotes then we will decide who is going to do that for us, probably on Friday. The timeline for that we have been quoted on is about 8 to 10 weeks. That will put us with a PEA sometime around Christmas. It will probably be delayed because of the Christmas period I would imagine.

Tracy Weslosky: I often encourage investors to take a look at the CEO's background on LinkedIn. I will tell you, you have an impressive professional career Robin. In addition to that you have just appointed a new board member. Can you kind of give the InvestorIntel audience a reminder of what kind of strength you have in your core team and management please?

Robin Birchall: Talking about me, I have quite a long background in the mineral resource sector; long time corporate financier and then moved over to the investor side; was appointed to a number of boards and executive positions. We built a mine at the company I was the executive chairman of and then I was asked to join Giyani at the end of last year. Since then we have added a number of board members. We added Mike Jones earlier in the year, somebody I worked with. Has a very long track record both on the corporate side, mine management side and on the finance side; worked in Botswana for 8 years. Then more recently with Duane Parnham deciding that he no longer wanted to continue as the chairman and looking to take a bit more time for himself and move towards retirement, we appointed Jonathan Henry who was the CEO of Gabriel Resources, quite a large gold mining company in

Romania. He has a very long history of operating mines. He was a previous client of mine. We are quite privileged to add somebody of his caliber...to access the complete interview, [click here](#)

Giyani Metals CEO on huge market demand for manganese

written by InvestorNews | October 22, 2018

July 4, 2018 – “The market is very strong at the moment. I do not know if you noticed, but CATL listed in Hong Kong raising over a billion dollars. They are going to be the largest battery manufacturer. Demand is just going to be huge for the manganese units going forward.” states Robin Birchall, CEO & Director of [Giyani Metals Corp.](#) (TSXV: WDG), in an interview with InvestorIntel’s Peter Clausi.

Peter Clausi: We are here to talk about Gyiani Metals and manganese. You have 3 properties in Botswana.

Robin Birchall: That is correct. We have the K. Hill, Otse, and Lobatse.

Peter Clausi: Which is your favorite?

Robin Birchall: I would say my favorite is K. Hill. It is the most advanced of all of them.

Peter Clausi: Did you buy that in advanced stage or were you the

ones who moved it along?

Robin Birchall: No, we have moved everything along. We have done all the drilling this year. We have done that in a very short period of time, about 4 months, completed our drilling at K. Hill. We are now drilling at Otse, which is our second property. Because we are under budget, cash and meters wise we are even going to drill at Lobatse.

Peter Clausi: Nice. You do not hear that too often. How many holes did you drill at K. Hill?

Robin Birchall: We drilled 18 holes there. One of which was a metallurgical hole. We have drilled now 4 holes at Otse, a good 3 holes left to do there. We plan probably about 6 at Lobatse.

Peter Clausi: Where do you assay those? Is it in country or do you ship them out?

Robin Birchall: No. They go to SGS, Randfontein in South Africa. All the samples have gone from K. Hill to SGS, Randfontein and we are waiting for them to come back. They will be back in the next 10 days.

Peter Clausi: It takes what, about a week for you to compile those into a press release?

Robin Birchall: Yeah, I am hoping to have some initial results. Yeah, that is our next press release will be something on the grades we are seeing in the holes.

Peter Clausi: That is often a major catalyst; looking forward to seeing that. Will that include the second drill program as well or just K. Hill?

Robin Birchall: No, K. Hill is for resource and Otse is where it is not quite exploration, but it is not quite enough to be a

resource. It is really for us to understand that deposit a little bit better.

Peter Clausi: If I remember your press releases correctly, you were counting on premium pricing for your manganese given its quality.

Robin Birchall: That is correct. From the visual inspection we are pretty happy with what we have got there, but obviously the assays have to come back.

Peter Clausi: What do you see happening in the manganese market?

Robin Birchall: That is a really good question. The market is very strong at the moment. I do not know if you noticed, but CATL listed in Hong Kong raising over a billion dollars. They are going to be the largest battery manufacturer. Demand is just going to be huge for the manganese units going forward...to access the complete interview, [click here](#)
