

Ian Clifford on FuelPositive's first mover advantage in sustainable green ammonia production

written by InvestorNews | September 28, 2023

In a recent interview with host Tracy Weslosky, [FuelPositive Corporation](#)'s (TSXV: NHHH | OTCQB: NHHHF) Chairman and CEO Ian Clifford revealed groundbreaking developments in their mission to revolutionize the green ammonia production industry. Discussing FuelPositive's recent exclamation-worthy [news release](#) on creating the world's first decentralized, containerized Green Ammonia system, Ian highlights that their system has been validated by independent third parties and production is now scaling up.

Ammonia is an \$80 billion market and is incredibly important in agriculture. However, Ian said that traditional ammonia production is carbon-intensive. Having developed a system that eliminates carbon emissions from the production of ammonia, Ian explained how FuelPositive's green ammonia, produced onsite, could be a disruptor in the industry and is garnering a lot of interest from multiple sectors globally.

Ian also discussed how FuelPositive is well-positioned to take advantage of carbon credit markets. FuelPositive's green ammonia production system creates valuable carbon credits allowing them to further invest in technology development and at the same time help end users reduce cost and offset the price of the system.

About FuelPositive Corporation

FuelPositive is a Canadian technology company committed to providing commercially viable and sustainable, “cradle to cradle” clean technology solutions, including an on-farm/onsite, containerized Green Ammonia (NH₃) production system that eliminates carbon emissions from the production of Green Ammonia.

By focusing on technologies that are clean, sustainable, economically advantageous and realizable, the Company aims to help mitigate climate change, addressing unsustainable agricultural practices through innovative technology and practical solutions that can be implemented now. The FuelPositive on-farm/onsite, containerized Green Ammonia production system is designed to produce pure, anhydrous ammonia for multiple applications, including fertilizer for farming, fuel for grain drying and internal combustion engines, a practical alternative for fuel cells and a solution for grid storage. Green Ammonia is also considered a key enabler of the hydrogen economy.

FuelPositive systems are designed to provide for Green Ammonia production on-farm/onsite, where and when needed. This eliminates wildly fluctuating supply chains and offers end-users clean fertilizer, energy and Green Ammonia supply security while eliminating carbon emissions from the production process. The first customers will be farmers. Farmers use 80% of the traditional grey ammonia produced today as fertilizer.

The Karbon-X Advantage in the Fight Against Climate Change

written by InvestorNews | September 28, 2023

InvestorIntel's Tracy Weslosky recently interviewed Chad Clovis, the CEO of Karbon-X Corp. (OTC: KARX), a trailblazing carbon marketing and project development firm that is at the vanguard of North America's ESG conversation.

Chad Clovis of Karbon-X Talks about the Launch of its Carbon Credits App

written by InvestorNews | September 28, 2023

In this InvestorIntel interview during PDAC 2023, Melissa Sanderson talks to [Karbon-X Corp.](#)'s (OTC: KARX) CEO and Director Chad Clovis about how Karbon-X is providing carbon credits to everyday citizens wishing to reduce their carbon footprint. Through Karbon-X's [web application](#) and their upcoming mobile apps, Chad explains how they provide users an easy way to offset their carbon footprint or greenhouse gas emissions by supporting a project of their choice that has real-world, positive environmental impacts.

Providing an update on Karbon-X's portfolio of projects in reforestation, ocean cleanup, and direct air capture, Chad discusses how Karbon-X offers carbon credits to industrial users as well.

Chad also discusses the app's functionalities, including the monthly subscription fees and gifting options, as well as the PDAC initiative called "Drill Green" which allows resource companies to offset their exploration, construction, and extraction impacts.

About Karbon-X Corp.

Karbon-X Corp is a tech-based carbon marketing company specializing in the sale of carbon credits to everyday citizens wishing to reduce their impact on the planet. The company gives users the ability to pick a project that interests them, and subsequently re-invests into carbon offset generating projects that matter most to their users. Industrial users are also afforded the opportunity to offset their environmental impact through the Karbon-X Drillgreen initiative, details of which can be found at drillgreen.ca.

Selling carbon credit futures by way of a convertible note, dynaCERT offers an innovative way to raise capital

written by Tracy Weslosky | September 28, 2023

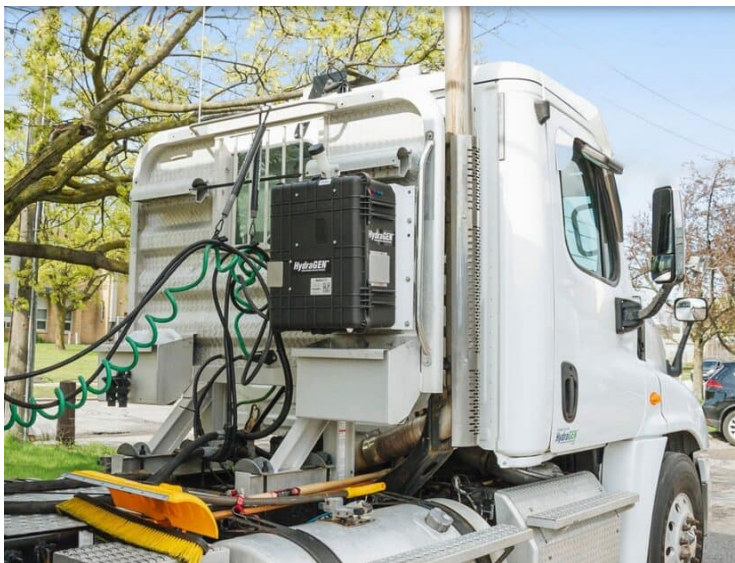

We all know that companies can sell our data and how valuable data has become. Now a company is aiming to sell 'emissions reductions data in the form of carbon credit futures'.

[dynaCERT Inc.](#) (TSX: DYA | OTCQX: DYFSF) recently [announced](#) a unique way to raise capital by selling up to CAD\$10M of Carbon Credit Convertible Notes. The concept is quite simple. dynaCERT's will issue a convertible note that is convertible into carbon credit 'futures' after 5 years, so is effectively raising capital from the future carbon credit proceeds to come

from the carbon credits potentially earned by dynaCERT's emission reduction product, HydraGEN™.

dynaCERT's HydraGEN™ system and HydraLytics™ software creates hydrogen and oxygen on-demand through a unique patented electrolysis system and supplies these gases through the air intake of internal combustion engines to enhance combustion, resulting in lower carbon emissions and greater fuel efficiency. The main target market is heavily polluting diesel engines. HydraLytics™ is able to create the data to show the carbon reduction/credit. (see [video](#) 3 minute 50 second mark)

dynaCERT's HydraGEN™ hydrolysis unit reduces emissions and improves fuel efficiency

Reducing Greenhouse Gases

Our Green Initiative focuses on reducing the amount of Greenhouse gases (GHG) emitted by the combustion of carbon based fuels. Our technology works with internal combustion engines used for industrial production processes, such as power generation, and for transportation, which includes tractor-trailers, rail, marine and off-road construction equipment. As more opportunities open for us to validate our technology, the more impact we will have in these areas.

Reducing the amount of GHGs provides benefits to the environment, to communities, to businesses and to our shareholders.

Source: [dynaCERT website](#)

The dynaCERT announcement [stated](#): “The offering is not convertible into the Company's common shares and is non-dilutive to shareholders of the Company. Each Carbon Credit Convertible Note is priced at \$1,000 (Canadian) with a maturity date of ten (10) years after the date of issue. Commencing at the fifth (5th) anniversary after the date of issue, the Carbon Credit Convertible Notes will be convertible, at any time thereafter,

at the option of the holder, into Carbon Credits generated by dynaCERT's proprietary HydraGEN™ Technology. The Carbon Credit Convertible Notes are currently designed to be offered as a non-brokered private placement to institutional investors that wish to be the first to gain long term exposure to Carbon Credits.....”

The ‘methodology’ of the Carbon Credit Convertible Notes has been approved by [VERRA](#); however full approval is still in the final stages as you can read [here](#). VERRA certify and manage the world's leading voluntary carbon markets program, the Verified Carbon Standard (VCS) Program. VERRA [state](#): “The Verified Carbon Standard (VCS) Program is the world's most widely used greenhouse gas (GHG) crediting program. **It drives finance toward activities that reduce and remove emissions**, improve livelihoods, and protect nature.....”

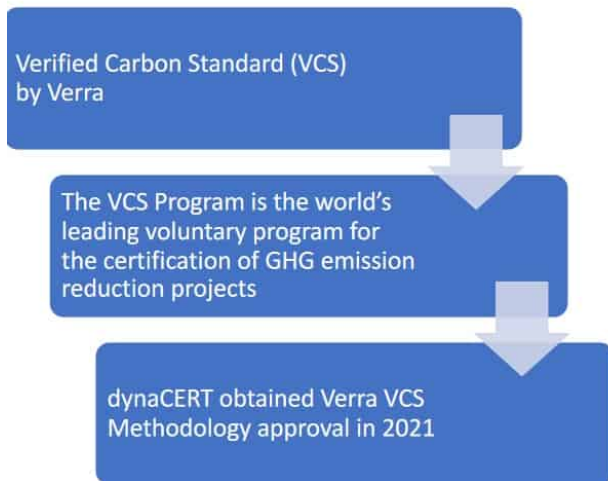

Jim Payne, President, CEO, and Director of dynaCERT, [stated](#): “Carbon Credit Convertible Notes are an innovative structure offering premium Carbon Credit futures **derived from measured and verified emission reductions from the data received from internal combustion engines**.”

Note: Bold emphasis by the author.

Quite amazing that the ‘data showing emissions reductions’ nowadays potentially qualifies for carbon credits.

dynaCERT obtained VERRA Verified Carbon Standard ‘methodology’ approval in 2021

Verra Carbon Credits

Source: [dynaCERT company presentation](#)

dynaCERT plan to use the raised funds towards “working capital of its currently available HydraGEN™ Technology business and fulfill timely delivery of sales of its products and to expedite current and new potential deliveries globally.”

dynaCERT is making inroads with sales into the mining industry

dynaCERT’s emission reduction HydraGEN™ product continues to gain traction in terms of sales into the mining industry. The mining industry is under significant ESG pressure to reduce emissions. As [announced](#) on November 15, 2022, dynaCERT’s distributor has reported sales and/or pilot trials with multiple leading global mining companies including Vale, Codelco, Nexa Resources, Arauco, Antamina, and a Mexican multinational food processing and distribution company Sigma Alimentos.

dynaCERT is also working on technology to develop Green Hydrogen (5:30 mark in the [video](#)), but we will leave that story for another day.

Closing remarks

Selling carbon credit futures by way of a convertible note is certainly an innovative way to raise capital. It potentially indicates a very strong demand by carbon emitting companies to be able to buy carbon credits (in this case carbon credit futures) to help offset their carbon emissions, otherwise face hefty fines.

InvestorIntel will circle back and keep investors updated on this one and see how dynaCERT goes with their offering.

You can learn more by watching the recent dynaCERT CEO video interview moderated by Byron W King [here](#).

dynaCERT trades on a market cap of C\$69 million.

Justin Cochrane on Carbon Streaming's carbon credit streams and investment pipeline and uplisting to NASDAQ

written by InvestorNews | September 28, 2023

In a recent InvestorIntel interview, Tracy Weslosky spoke with Justin Cochrane about [Carbon Streaming Corporation's](#) (NEO: NETZ | OTCQB: OFSTF) focus on acquiring its high-quality portfolio of carbon credit streams and investments. Expanding on their [2022](#)

[strategic objectives](#), Justin touches on Carbon Streaming's \$200 million near-term potential pipeline of opportunities over the next 12-months "out of a total pipeline of [\\$700 million](#)."

In this InvestorIntel interview, which may also be viewed on the InvestorIntel YouTube channel ([click here to subscribe](#)), Justin highlights plans to list Carbon Streaming on [NASDAQ](#). Highlighting the growing interest in ESG directed investments, an increased focus on companies to reduce their carbon footprint, Justin explains how Carbon Streaming invests capital through carbon credit streaming arrangements with project developers and owners to accelerate the creation of carbon offset projects by bringing capital to projects that might not otherwise be developed.

To watch the full interview, [click here](#)

About Carbon Streaming Corporation:

Carbon Streaming is a unique ESG principled company offering investors exposure to carbon credits, a key instrument used by both governments and corporations to achieve their carbon neutral and net-zero climate goals. Our business model is focused on acquiring, managing and growing a high-quality and diversified portfolio of investments in projects and/or companies that generate or are actively involved, directly or indirectly, with voluntary and/or compliance carbon credits.

The Company invests capital through carbon credit streaming arrangements with project developers and owners to accelerate the creation of carbon offset projects by bringing capital to projects that might not otherwise be developed. Many of these projects will have significant social and economic co-benefits in addition to their carbon reduction or removal potential.

Carbon Streaming looks set for long term revenue growth from trading carbon credits and pursues a listing on a major exchange

written by InvestorNews | September 28, 2023

The carbon credits market has been doing very well the past year. The world's first and largest market for trading carbon credits is the [European Union Emissions Trading System](#) (EU ETS). Under the EU ETS, regulated entities buy or receive emissions allowances, which they can trade with one another as needed. The EU ETS works on the 'cap and trade' principle as you can read [here](#). The key is that emitters can purchase carbon credits and if they exceed their emissions caps they are fined heavily. Meanwhile, companies that reduce carbon emissions (renewable energy, forestry etc) can earn money by selling their carbon credits. The idea is that by placing a cost on carbon it helps motivate emitters to reduce emissions.

Reports have indicated that a carbon price [in excess of US\\$100/t](#) may be needed by 2030 in order to stay below the temperature goals contained in the Paris Agreement.

Today's company aims to accelerate the world's transition to a

net-zero carbon future by bringing capital to projects that might not otherwise be developed. In return for the capital, the company receives their carbon credits.

EU Carbon permits prices have risen 162% over the past year

 **EU Carbon permits 1 year price chart**

Source: [Trading Economics](#)

Note: Carbon credit pricing varies globally and by market. In the voluntary market prices are closer to only an average of [US\\$12/t CO₂e](#) as of December 2021.

[Carbon Streaming Corporation](#) (NEO: NETZ | OTCQB: OFSTF) offers a way for investors to invest into the growth of the carbon credit market. It acts as an investment vehicle, purchasing carbon credit revenue streams in return for an upfront payment. If the value of the carbon credits goes up or can be sold later at a profit then the stream becomes more valuable, thereby potentially boosting the value of the carbon streaming acquirer. Revenues and profits will also depend on quality and return on investment of the streaming deals that are made.

Carbon Streaming currently has a portfolio of 3 to 4 global carbon credits projects which are:

- Rimba Raya (Borneo, Indonesia)
- MarVivo Blue Carbon (Baja California Sur, Mexico)
- Cerrado Biome (Cerrado, Brazil)
- Bonobo Peace Forest (DRC, Africa) – Subject to FS results.

Carbon Streaming Corp.'s current portfolio of 3 to 4 carbon credit projects

Source: [Carbon Streaming Corporation company presentation](#)

Note: Carbon Streaming Corporation has only made an initial investment in the Bonobo Peace Forest, which will be directed to prepare Feasibility Studies and establish initial project activities. Hence why the chart says “3 to 4” projects.

Catalysts and strategy in 2022 for Carbon Streaming Corporation

In 2022 Carbon Streaming intend to achieve the following:

- Acquiring additional carbon credit stream and royalty investments to grow the portfolio. The Company has a pipeline of potential opportunities of \$200 million near term (<12 months), out of a total pipeline of \$700 million.
- Achieving revenue from the sale of carbon credits (see image below).
- Executing on a US listing on a major U.S. stock exchange, targeted within H1, 2022.

2022 estimated carbon credits to be received by Carbon Streaming Corporation from Rimba Raya and Cerrado Biome

Source: [Carbon Streaming news release January 18, 2022](#)

CEO Justin Cochrane [stated in January 2022](#): “Moving into 2022, we anticipate the delivery of **approximately 7.0 million carbon credits** from our existing stream investments, announcing new carbon project investments around the globe and deepening relationships with our growing community of carbon project developers. We will continue to invest in building the best team in the carbon markets industry and progressing our plans for a

proposed U.S. Listing.”

Note: Bold emphasis by the author. Also, the “attributable credits” to Carbon Streaming Corp. are quoted in the table above as 5 to 5.6 million.

Closing remarks

Carbon Streaming Corporation offers investors a growing portfolio (currently 3 to 4 projects) of carbon credit streams for ongoing revenue and potential long-term appreciation.

2022 should be a very good year for the Company as they achieve first revenues from about 5 to 5.6 million attributable carbon credits and pursue more project deals and a U.S listing on a major U.S exchange.

Carbon Streaming Corporation trades on a market cap of [C\\$605M](#) after a strong 2021 with their stock moving up from ~C\$7.55 a year ago to now trade at [C\\$13.00](#). Stay tuned in 2022.

Chris Thompson with Justin Cochrane on Carbon Streaming’s first Blue Carbon Credit Project

written by InvestorNews | September 28, 2023

In a recent InvestorIntel interview, Chris Thompson spoke with Justin Cochrane, Founder, Director and CEO of [Carbon Streaming](#)

[Corporation](#) (NEO: NETZ | OTCQB: OFSTF) about Carbon Streaming's first [blue carbon credit project](#) with MarVivo in Magdalena Bay, Mexico.

In this InvestorIntel interview, which may also be viewed on YouTube ([click here to subscribe to the InvestorIntel Channel](#)), Justin explained how the MarVivo Blue Carbon Conservation Project will not only protect mangrove forests but will also protect the marine ecosystem around the mangroves. He went on to provide [an update](#) on Carbon Streaming's Cerrado Biome Project aimed at protecting native forests and grasslands in the Cerrado biome. Highlighting the strong demand for ESG themed investments, Justin explained how Carbon Streaming is well positioned to benefit from the rising carbon credit prices.

Justin Cochrane from Carbon Streaming with Chris Thompson on accessing the capital markets to help fight climate change

written by InvestorNews | September 28, 2023

In a recent InvestorIntel interview, Chris Thompson spoke with Justin Cochrane, President, CEO and Director of [Carbon Streaming Corporation](#) (NEO: NETZ) about the renewed interest in the carbon market and how Carbon Streaming is accessing and leveraging the capital markets to help fight climate change.

In this InvestorIntel interview, which may also be viewed on YouTube ([click here to subscribe to the InvestorIntel Channel](#)), Cochrane highlighted the rising carbon credit prices driven by global warming and climate change awareness and added that Carbon Streaming Corporation invests directly into carbon projects around the world, which are either removing carbon from the atmosphere or avoiding the emission of carbon into the atmosphere in exchange for the carbon credits that they're generating. Justin also provided an update on Carbon Streaming's recent private placement which had participants from 78 different countries.

To watch the full interview, [click here](#)

**Carbon Streaming's Justin
Cochrane on offering ESG
investors exposure to the**

carbon credit market

written by InvestorNews | September 28, 2023

In a recent InvestorIntel interview, Tracy Weslosky speaks with Justin Cochrane, President, CEO and Director of [Carbon Streaming Corporation](#) (OTC: MXVDF) about the carbon credit market and accelerating global initiatives to reduce emissions of greenhouse gases.

In this InvestorIntel interview, which may also be viewed on YouTube ([click here to subscribe to the InvestorIntel Channel](#)), Justin went on to explain how the carbon credit market works and how “Carbon Streaming is taking a proven business model in royalty and stream financing and applying it to the carbon credit world.” With almost half of S&P 500s pricing carbon into their investment decisions, Justin said that carbon credit is a key part of the future. He added that Carbon Streaming invests to accelerate the development of carbon credit projects around the world. With Osisko Gold Royalties Ltd. (NYSE: OR | TSX: OR) as one of the largest shareholders, Justin said that Carbon Streaming is one of the few public companies focused on carbon space providing ESG investors exposure to the carbon market.
