

Justin Cochrane from Carbon Streaming with Chris Thompson on accessing the capital markets to help fight climate change

In a recent InvestorIntel interview, Chris Thompson spoke with Justin Cochrane, President, CEO and Director of Carbon Streaming Corporation (NEO: NETZ) about the renewed interest in the carbon market and how Carbon Streaming is accessing and leveraging the capital markets to help fight climate change.

In this InvestorIntel interview, which may also be viewed on YouTube (click here to subscribe to the InvestorIntel Channel), Cochrane highlighted the rising carbon credit prices driven by global warming and climate change awareness and added that Carbon Streaming Corporation invests directly into carbon projects around the world, which are either removing carbon from the atmosphere or avoiding the emission of carbon into the atmosphere in exchange for the carbon credits that they're generating. Justin also provided an update on Carbon Streaming's recent private placement which had participants from 78 different countries.

About Carbon Streaming Corporation:

Carbon Streaming is a unique ESG principled investment vehicle offering investors exposure to the carbon credits market, a key instrument used by both governments and corporations to achieve their carbon neutral and net-zero climate goals. The company's business model is focused on acquiring, managing and growing a high-quality and diversified portfolio of

investments in projects and/or companies that generate or are actively involved, directly or indirectly, with voluntary, and/or compliance, carbon credits.

The Company invests capital through carbon credit streaming arrangements with project developers and owners to accelerate the creation of carbon offset projects by bringing capital to projects that might not otherwise be developed. Many of these projects will have significant social and economic co-benefits in addition to their carbon reduction or removal potential.

Carbon Streaming's Justin Cochrane on offering ESG investors exposure to the carbon credit market

In a recent InvestorIntel interview, Tracy Weslosky speaks with Justin Cochrane, President, CEO and Director of Carbon Streaming Corporation (OTC: MXVDF) about the carbon credit market and accelerating global initiatives to reduce emissions of greenhouse gases.

In this InvestorIntel interview, which may also be viewed on YouTube ([click here](#) to subscribe to the InvestorIntel Channel), Justin went on to explain how the carbon credit market works and how "Carbon Streaming is taking a proven business model in royalty and stream financing and applying it to the carbon credit world." With almost half of S&P 500s pricing carbon into their investment decisions, Justin said that carbon credit is a key part of the future. He added that Carbon Streaming invests to accelerate the development of carbon credit projects around the world. With Osisko Gold

Royalties Ltd. (NYSE: OR | TSX: OR) as one of the largest shareholders, Justin said that Carbon Streaming is one of the few public companies focused on carbon space providing ESG investors exposure to the carbon market.

ESG Alert: No matter how you slice it, the carbon credit world is big now and destined to get a lot bigger...

With the current focus on climate change and the need to reduce our global carbon footprint it would probably make sense to have an economic way for nations and companies to commoditize carbon in order to better track and deal with this problem. Well there is and it may come as a surprise to learn that there has been a fungible carbon emissions trading market

since 2005 – the EU Emissions Trading System. Also known as EUAs (European Union Allowance), similar to other commodities, EUAs trade on the Intercontinental Exchange (ICE). The carbon emission contract trades in Euro on a per tonne of CO2 equivalent basis, with yesterday's closing price at just over €52 and a 52 week range of €23 to just under €57.

There are many companies around the world, including financial institutions, utilities, fossil fuel companies, and others, that actually have dedicated carbon emission trading desks transacting things like EUAs and have done so for a long time. However, today we are going to look at a different perspective on this market, one would suggest a natural evolution for a commodity, a streaming company that gives investors exposure to the world of EUAs. Carbon Streaming Corp. (OTC: MXVDF) is a unique ESG principled investment vehicle offering investors exposure to carbon credits, a key instrument used by both governments and corporations to achieve their carbon neutral and net-zero climate goals. The Company intends to invest capital through carbon credit streaming arrangements with project developers and owners to accelerate the creation of carbon offset projects by bringing capital to projects that might not otherwise be developed.

You may have heard several companies around the world talking about setting net-zero emissions goals, in fact over 1,500 companies have announced plans to be net-zero by 2050 or sooner. Obviously, that is going to prove to be very difficult for those involved in resource extraction, manufacturing and even bitcoin mining that require more energy than is presently available on a renewable basis. But how will they get to net-zero? In the interim the plan is to offset the carbon they put into the atmosphere by buying offsets like EUAs. This can become a pretty complex circle of (carbon) life so we'll try to keep it simple here. You can break down carbon markets into two basic categories: compliance or regulated, where markets for carbon credits are created by the need to comply with a

regulatory act; and voluntary, where corporations, governments and even individuals volunteer to offset their emissions by purchasing carbon credits.

No matter how you slice it, the carbon credit world is big now and destined to get a lot bigger. The estimated size for the compliance/regulated market was US\$261 billion in 2020, a five-fold increase from 2017. The voluntary carbon market was a much more modest \$320 million in 2019, although UN Special Envoy for Climate Action Mark Carney has said the voluntary market “needs to be a \$50-100 billion per annum.” And that’s why Carbon Streaming has been raising capital and signing up projects to build up an inventory of carbon credits.

Since the start of 2021, Carbon Streaming has raised \$46 million including \$32.5 million in March and another \$11.6 million in May. But the Company is not just sitting on that cash having recently announced commitments to invest in the MarVivo Blue Carbon Conservation Project in Magdalena Bay in Baja California Sur, Mexico, an exclusive term sheet to develop two carbon credit projects within the Bonobo Peace Forest located in the Democratic Republic of Congo and a strategic joint-venture partnership with an established First Nations business in British Columbia to source and finance investment opportunities in collaboration with First Nations and develop projects within their territories to combat climate change through the reduction of greenhouse gas emissions. In all, Carbon Streaming has sourced a potential deal pipeline of over US\$500 million with its near-term pipeline valued at approximately US\$170 million at target IRRs of 15%+.

Pipeline of Opportunities

Carbon Streaming has sourced a potential deal pipeline of over US\$500 million with its near-term pipeline valued at approximately US\$170 million at target IRRs of 15%+

Near-Term Opportunity Pipeline				
Project	Location	Investment Type	Target IRR	Investment (US\$)
Forestry	Asia Pacific	carbon stream	>15%	>\$50 million
Forestry	Africa	carbon stream	>20%	>\$15 million
Forestry	Africa	carbon stream	>20%	>\$10 million
MarVivo	North America	carbon stream	>15%	\$6 million
Energy	Africa	carbon stream	>20%	>\$35 million
Forestry	Asia Pacific	carbon stream	>15%	>\$25 million
Forestry	North America	carbon stream	>20%	>\$15 million
Forestry	North America	carbon stream	>20%	>\$10 million
Energy	South America	carbon stream	>20%	>\$2 million
Forestry	South America	carbon stream	>20%	>\$1 million
Total				>\$170 million

Note: The potential near-term carbon streaming transaction pipeline listed above represents an estimate by management based on potential transactions which remain under various states of non-binding proposal and/or negotiation by the Company. There can be no assurance that the Company will be able to enter into definitive agreements for, or otherwise complete the acquisition of, all or any of the potential carbon streaming transactions referenced above, nor provide any assurance that the stated targeted after-tax internal rates of return will be realized by the Company.

Source: Corporate Presentation

So unless you happen to have a working model of a cold fusion generator that you've been keeping from the world, carbon credits are going to be with us for a while and likely to become even more commoditized than they already are. Carbon Streaming represents one of the few opportunities to participate in this space in today's market without having to set up your futures trading account and transacting EUAs.
