

Is North America ready to embrace cryptocurrency miners fleeing China?

If you've been following some of the noteworthy news items in the cryptocurrency space, you'll be aware that in May of this year, China banned financial institutions and payment companies from providing services related to cryptocurrency transactions, and warned investors against speculative crypto trading. China has banned crypto exchanges and initial coin offerings but has not barred individuals from holding cryptocurrencies...yet, but some suspect that may be on the horizon. June saw the Chinese government further up the pressure with The People's Bank of China summoning payments firm Alipay and several major lenders to tell them they must not provide cryptocurrency-related services. Then in early July China's central bank said it had called for the shutdown of a company that "was suspected of providing software services for virtual currency transactions." These latest actions in China serve as a positive indicator for cryptocurrency mining operations in North America.

However, we are all aware that North America also has its focus on the reduction of its carbon footprint, which hardly seems to fit with power-hungry Bitcoin mining. The solution is a move towards efficient, clean cryptocurrency mining and that is being facilitated by Link Global Technologies Inc. (CSE: LNK). Link generates revenues from building and managing semi-portable, self-contained power solutions (containers) that can be rapidly deployed in virtually any environment; providing cost-effective power and infrastructure solutions to third party digital currency miners. Link is an innovative power and infrastructure solutions provider for Bitcoin mining, and data hosting operations.

The Company's vision is a fully integrated hybrid of clean energy infrastructure and active support for the digital currency community. They have made two huge steps recently to help differentiate themselves and get on board with the increasing focus on how cryptocurrency is mined. First, in July, Link announced it had signed the Crypto Climate Accord. What does that mean? The Crypto Climate Accord (CCA) is a private sector-led initiative to decarbonize the cryptocurrency and blockchain sector. The CCA brings together organizations that inform, develop, test, and implement new solutions that accelerate cryptocurrency's transition to renewable energy. As a CCA Signatory, Link has committed to achieve net-zero emissions from the electricity consumption associated with all of its respective crypto-related operations by 2030. Putting their money where their mouth is, two weeks ago the Company announced a letter of intent to acquire Clean Carbon Equity (CCE). This \$1.4 million transaction (payable in shares) will provide Link with one of Canada's leading traders of Verified Emission Reduction Credits in the voluntary carbon offset market. Along with showing Link's commitment to carbon neutrality CCE's business supports clean energy projects around the world, assists customers with reducing their Greenhouse Gas footprint and provides a resource to assist in reducing emissions to support Canada's plan of Net Zero emissions by 2050.

The Company is obviously moving in the right direction to combine global desire for cryptocurrency with the need for it to be clean and green. But as a potential investor, what's important to me is if they can make money doing it. The majority of Link's revenue is currently derived from hosting not actual mining, which I like to see. Call me a wimp but the day to day fluctuations in the price of Bitcoin are a little too much for me. A more reliable, steady form of income from hosting is the kind of revenue I'm looking for. Q2 saw hosting revenue grow to \$836,092 up from \$689,640 the previous quarter.

We can anticipate this hosting revenue should continue to grow based on progress Link is making adding power capacity and hosting agreements. As of May 31st, the Company had secured sites for an additional 50 MW of power-generating assets and continued to commission an existing 18.75 MW into commercial operations. To utilize that power capacity, on Jun 27th they signed an agreement for a 40MW turnkey solution for hosting 12,000 of Atlas Mining's latest generation Bitcoin miners. Commissioning is slated for late Q3 through Q4, 2021 with the agreement providing a profit-sharing model, in addition to the supply of power and infrastructure services. This is in addition to a 10MW agreement disclosed June 24th with North American cryptocurrency mining company Mission World Group.

Granted Link is not profitable at this point in time. It is still very much in a growth phase where capital expenditures are outpacing current revenue. But you can see where this is headed by the hosting capacity the Company is bringing online. Additionally, they have signed a creative funding vehicle to allow the growth to continue with an \$18 Million Equity Facility with Alumina Partners, LLC. Link, at its discretion, may elect to drawdown in \$1,000,000 increments of the Facility as a new Offering with the terms of each Offering being determined subject to market conditions at the time of the drawdown. The Company currently has 52.3 million shares outstanding for a market cap of \$27.7 million based on Friday's close of \$0.53. We know that by the end of Q3 they will be getting close to adding an incremental 50MW of hosting capacity and are committed to doing it in a carbon neutral way. I'll be looking for continued top line revenue growth in Q3 knowing it should really ramp up in Q4.

The Nameless Broker on Global Blockchain Technologies

Global Blockchain Technologies Corp. (CSE: BLOC) is a Vancouver-based investment company that specializes in projects and holdings in the blockchain and cryptocurrency industry. Taking a different approach than most other players in this space, Global Blockchain partners and collaborates with existing businesses to build blockchain applications and cryptocurrencies based on existing business use cases. Working in both the public and private sectors, Global Blockchain has built an impressive portfolio of projects, several of which are set to take off in Q3 of 2018.

Laser Network

With more than 1,600 cryptocurrencies on the market, there is not currently an easy way to trade one cryptocurrency for another. The Laser Network acts as a service layer to connect one cryptocurrency's blockchain to another, kind of like how SWIFT connects different countries' banking systems. Laser was first announced in April of 2018, causing Global Blockchain's stock price to spike significantly. Laser will have a proprietary cryptocurrency called the Photon, which will have a crowdsale in Q3 of 2018, for which significant interest from accredited investors has already been established.

Stratus Marketplace

The Stratus Marketplace acts as an AirBnB-style exchange for enterprise users to transact storage. Users will benefit from either the ability to purchase storage space at discount prices, or sell off excess storage space to recover what they paid for it. While the blockchain will facilitate this in an efficient and trustless manner, it will also make data more secure by "shredding" files to be stored in different

facilities, giving no single storage host any full file in their custody. This is a key advantage over centralized cloud storage providers. With several buyer and seller enterprise users set to populate the network, the Stratus Marketplace will also be in motion as of Q3 of 2018.

Playboy Cryptocurrency Wallet

Global Blockchain has partnered with Playboy to integrate VIT (Vice Industry Token) – a cryptocurrency that pays users for engagement, into Playboy's web portal Playboy.tv. With earned or purchased tokens, VIT will be accepted as a payment method for exclusive content on Playboy.tv. This will be integrated through an API (Application Programming Interface), making the earning and spending of tokens seamless. The wallet will be made to work with this API, making it easy to use, and the first of its kind for the adult industry.

As of this writing, Global Blockchain is also working on multiple projects with government bodies in the Middle East to build blockchain and cryptocurrency solutions. They presently involve a trade finance platform, which will enable new forms of cost-effective financing for the commodities trade, and a cryptocurrency spot exchange.

Also exciting, Global Blockchain's mining spinoff Global Blockchain Mining Corp. has recently been conditionally approved by the CSE for trading under the symbol "FORK". Investors who held shares in Global Blockchain Technologies Corp. before market close on February 27th, 2018 will automatically receive FORK shares as a result of this spin-off. As a cryptocurrency mining conglomerate that has access to 175 MW of reliable power at a low cost, this gives investors exposure to the lucrative practice of cryptocurrency mining in a single security.

Best of all, aside from all projects being on track with most set to have traction in Q3 of 2018, the company is operating

with zero debt, and sufficient cash reserves to complete all current projects as planned. As blockchain continues to grow, Global Blockchain is pleased to be part of the propelling forces that drive this growth, and they welcome investors along for the ride!
