Racing Towards a Greener Future: Vision Marine Technologies Teams Up with Shaun Torrente at Lake of the Ozarks Shootout 2023

written by InvestorNews | August 24, 2023

“The Lake of the Ozarks Shootout is the largest unsanctioned boat race in the US, named one of the nation’s eight ‘must-see’ boating events according to Powerboat Magazine.”

Picture this: a serene lake with a backdrop of captivating landscapes, suddenly disrupted by a powerful surge of energy, the sound of an engine roaring, and water spraying in all directions. **This isn’t just any boating event; it’s the stage for an electric revolution.** The esteemed Vision Marine Technologies Inc. (NASDAQ: VMAR) is teaming up with the legendary three-time boat racing world champion, Shaun Torrente. Their goal? To break previous speed barriers at the iconic 35th Edition of The Lake of The Ozarks Shootout, set for August 26th & 27th, 2023.

Remember the buzz last year when the boating world sat up, amazed at the breaking of the 109-mph speed record? Well, this year promises to be even more exhilarating. With Shaun Torrente steering the vessel, and the brains of Vision Marine, Alex Mongeon and Xavier Montagne, supporting him, this trio is bound to make waves.

But Vision Marine is not just about making a splash in speed records. Their dedication lies in bringing a change – to make

boating cleaner, quieter, and sustainable. Their E-Motion™ Technology is pioneering a green shift in the boating realm, ushering in an era where boats aren’t just about luxury or speed, but also about responsibility.

Lake of the Ozarks, with its spellbinding beauty, will not just be a race track but a showcase of the future. The E-Motion™ boats, especially the remarkable Four Winns H2e E-Motion™ 180 E-equipped model, are bound to steal the limelight. For those curious souls, representatives from Four Winns will be at hand, alongside their trusted partner Surdyke, ready to quench your thirst for knowledge.

The H2e, stemming from a collaboration between Four Winns and Vision Marine, is not just any boat. It’s an emblem of modernity, functionality, and sustainability. Boasting a top speed of 35 knots (40mph), its smart digital display is the cherry on top, making marine navigation, entertainment, and connectivity a breeze.

For those who won’t be able to witness this spectacle at Lake of the Ozarks, fret not. Vision Marine will be gracing the Paris Boat Show with its presence, and soon after, Four Winns will showcase the H2e at the Miami International Boat Show.

In essence, the collaboration between Shaun Torrente and Vision Marine isn’t just a fleeting event; it’s the beginning of a sustainable chapter in boat racing. As the date nears, the world watches, with baited breath, for a new chapter in boating history.
