

Drolet Stock Notes on Fjordland Exploration: Keep an Eye on this Copper, Nickel Past Producing Mine in Quebec

Mario Drolet, President of MI3 Communications Financières Inc. (MI3), released his Drolet Stock Notes on Fjordland Exploration Inc. (TSXV: FEX) on April 6, 2021, for exclusive distribution on InvestorIntel. Highlights include:

- In December, Fjordland acquired an option to earn a 100% interest in the past-producing Renzy nickel-copper mine. From 1969 to 1972, Renzy mined 716,000 tons at an average grade of .70% nickel and 0.72% copper.
- In early December, Fjordland announced that 18 drill targets had been fully evaluated at the North Thompson nickel project. Plans are underway to drill the targets as soon as permitting and financing allow.
- For South Voisey's Bay Nickel Project, numerous drill targets based on reprocessed gravity anomalies which are coincident with magnetic and EM signatures are ready for testing. The project is subject to HPX advancing the project under the current option agreement.
- Robert Friedland is a major shareholder.
- Support: S2; \$0.13 S1; \$ 0.15 Resistance: R1; \$0.17 R2; \$0.23

About Fjrdland Exploration Inc.

Fjrdland Exploration Inc. is a mineral exploration company that is focused on the discovery of large-scale economic deposits located in Canada. Fjrdland is actively exploring three high quality nickel projects.

In collaboration with HPX and Commander Resources, Fjrdland is exploring the South Voisey's Bay "Pants Lake Intrusive" target which is a Ni-Cu-Co deposit analogous to the nearby Voisey's Bay deposit located approximately 80 km to the north.

Fjrdland has been granted an option by CanAlaska Uranium to earn an initial 49% interest in the North Thompson Nickel Belt project, situated 20 km. north of Vale's long-life Thompson mine located in northern Manitoba. The project is considered prospective for Ni-Cu-Co-PGE magmatic sulphide mineralization analogous to the deposits hosting the historic mine.

Fjrdland has an agreement to acquire 100% of the Renzy nickel-copper project located near Maniwaki Quebec by spending \$1.0 million over 5 years. The project encompasses the former Renzy Mine where during the period from 1969 to 1972, 716,000 short tons were mined with average grades of 0.70 % Nickel and

0.72 % Copper. The location of the Renzy Shear zone and the overall quantity of the mafic/ultramafic rocks in the area that carry sulfides with elevated concentration of Ni, Cu, and PGM's bodes well for finding additional deposits.
