

Hemostemix's stem cell therapy pursues 'Your Fountain of Youth'

written by InvestorNews | April 18, 2022

What's a company worth to investors that could improve numerous medical conditions related to ischemia (lack of blood flow) and tissue damage, and potentially [improve the quality of life](#)? It would be hard to put a price on such a company if they could successfully commercialize or license their product or technology.

Today's company, [Hemostemix Inc.](#) (TSXV: HEM | OTCQB: HMTXF | FSE: 2VF0), is having remarkable success, yet due to its early stage has a market cap of only [C\\$19 million](#). That company is developing methods that use our own bodies' stem cells to heal certain diseases. The key diseases of focus for now are those revolving around ischemia, such as heart disease, stroke, and diabetic vascular disease and its complications such as limb loss. Over the next year, there will also be a lot of work done on nerve cell regeneration.

[Hemostemix Inc.](#) is developing 'stem cell therapy' for the treatment of ischemic disease and several other diseases. Hemostemix [owns 91 patents](#) across five patent families titled: Regulating Stem Cells, In Vitro Techniques for use with Stem Cells, Production from Blood of Cells of Neural Lineage, and Automated Cell Therapy.

Results to date have been outstanding, as shown in the image below.

Hemostemix summary of the business and ACP-01

ACP-01 is Hemostemix's pioneering first stem cell treatment called angiogenic cell precursor ("ACP"). Hemostemix [states](#): "ACP-01 has been used to treat over 300 patients, and it is the subject of a randomized, placebo-controlled, double-blind trial of its safety and efficacy in patients with advanced critical limb ischemia who have exhausted all other options to save their limb from amputation. On October 21, 2019, the Company announced the results from its Phase II CLI trial abstract presentation entitled "Autologous Stem Cell Treatment for CLI Patients with No Revascularization Options: An Update of the Hemostemix ACP-01 Trial With 4.5 Year Follow-up" which noted **healing of ulcers and resolution of ischemic rest pain occurred in 83% of patients, with outcomes maintained for up to 4.5 years.**"

Note: Bold emphasis by the author.

With such stunning success, it is little wonder that Hemostemix is very keen to protect their intellectual property.

On February 14, 2022 Hemostemix [announced](#) that they had "been granted International Trademark Registration No. 1624069 for **Your Fountain of Youth**, a registration that is valid for a period of 10 years." Hemostemix further [announced](#) on March 23, 2022 that it had resolved outstanding litigation with a settlement agreement that requires the other parties to return all data and intellectual property in relation to ACP-01 in their possession to Hemostemix.

This is a great outcome for Hemostemix and good news to investors, as the Company believes their ACP-01 intellectual property is incredibly valuable.

Hemostemix has previously published numerous other studies proving the benefit of ACP-01, notably in the treatment of ischemia in various parts of the body. Some examples include [improving ischemic cardiomyopathy patients](#) and [limb ischemia](#)

[patients](#).

Note: NCP stands for Nerve Cell Precursor. CCP stands for Cardiac Cell Precursor. These are cultivated from the patient's own stem cells using Hemostemix's patented technologies.

What's next for Hemostemix?

Apart from further studies, Hemostemix is now looking towards automating production, partnering and commercialization. The goal of improving stem cell production will help lower costs and potentially expand the business. Hemostemix also intends to advance their business development plans including possible licensing of their technology.

To help fund the above, Hemostemix recently announced a [\\$2,750,000 Convertible Debenture offering](#).

Closing remarks

Hemostemix's longer-term goal is to support a higher quality of life for all of us, a veritable "fountain of youth", where we could boost our health yearly with our own stem cells to help repair our bodies.

Hemostemix trades on a market cap of [C\\$19 million](#). Risk remains high due to the early stage, however there is truly blue sky potential if the Company can successfully license or commercialize their products in future years.

Thomas Smeenck on Hemostemix products for Your Fountain of Youth

written by InvestorNews | April 18, 2022

In a recent InvestorIntel interview, Tracy Weslosky spoke with Thomas Smeenck, Co-Founder, President and CEO of [Hemostemix Inc.](#) (TSXV: HEM | OTCQB: HMTXF) about Hemostemix's recent "blockbuster" [news release](#) on collaborating with world famous [Dr. James Shapiro](#) to Treat Type 1 Diabetes and about trademarking "Your Fountain of Youth".

In this InvestorIntel interview, which may also be viewed on YouTube ([click here to subscribe to the InvestorIntel Channel](#)), Thomas Smeenck said that Dr. James Shapiro is well known and respected for creating the Edmonton Protocol for the treatment of Type 1 Diabetes. Thomas went on to provide an update on Hemostemix's technology platform that uses stem cells from a patient's own blood to treat the heart-damage following a heart attack. Providing an update on Hemostemix's recently closed oversubscribed private placement, he went on to explain how Hemostemix has found a "Fountain of Youth."

About Hemostemix Inc.

Hemostemix is a publicly traded autologous (utilizing the patient's own stem cells) stem cell therapy company, founded in 2003. A winner of the World Economic Forum Technology Pioneer Award, the Company developed and has published seven peer reviewed articles about the safety and efficacy of its lead product ACP-01 as a treatment of CLI, PAD, Angina, Ischemic

Cardiomyopathy, Dilated Cardiomyopathy and other conditions of ischemia. ACP-01 has been used to treat over 300 patients, and it is the subject of a randomized, placebo-controlled, double blind trial of its safety and efficacy in patients with advanced critical limb ischemia who have exhausted all other options to save their limb from amputation.

On October 21, 2019, the Company announced the results from its Phase II CLI trial abstract presentation entitled “Autologous Stem Cell Treatment for CLI Patients with No Revascularization Options: An Update of the Hemostemix ACP-01 Trial With 4.5 Year Follow-up” which noted healing of ulcers and resolution of ischemic rest pain occurred in 83% of patients, with outcomes maintained for up to 4.5 years.

The Company owns 91 patents across five patent families titled: Regulating Stem Cells, In Vitro Techniques for use with Stem Cells, Production from Blood of Cells of Neural Lineage, and Automated Cell Therapy.

Thomas Smeenck on Hemostemix's autologous stem cell therapy technology and why some call

it 'the fountain of youth'

written by InvestorNews | April 18, 2022

In a recent InvestorIntel interview, Tracy Weslosky spoke with Thomas Smeenck, Co-Founder, President and CEO of [Hemostemix Inc.](#) (TSXV: HEM | OTC: HMTXF), about Hemostemix's autologous stem cell therapy and why he calls the technology "the fountain of youth."

In this InvestorIntel interview, which may also be viewed on YouTube ([click here to subscribe to the InvestorIntel Channel](#)), Thomas went on to say that Hemostemix's lead product ACP-01 works by treating ischemia (lack of blood circulation) in a patient's body. The technology has already been used to treat around 500 patients suffering from ischemia in the heart, arteries, and limb. He added that using the technology many patients were able to "save their limbs from otherwise certain amputations." Hemostemix has 91 patents including a patent on the automation of production which enables the company to scale the business "exponentially" as over a million patients lose their limbs to amputation in North America alone. The technology is now in Phase 2 clinical trial.
