

Innovative processing for the technology metals market

☒ November 10, 2015 – I would like to take this opportunity to thank everyone who attended the Technology Metals Summit on Wednesday, October 14th. This was the 3rd one we have done and we are actually in the throes of planning another one for May 2016 – a 2-day event, 1 day on technology related to cleantech and the 2nd day dedicated to technology metals.

Yes, Jack Lifton, Sue Glover and I threw this one together in record time, but the audience was full of industry leaders and investors that reinforced that the sector is not only evolving, but is arguably redirected towards competitive environmentally conscious technologies.

The Technology Metals Summit panel where this stood out the most prominently was co-moderated by Alastair Neill of Trinity Management Ltd. and Pol Le Roux, Vice President Sales and Marketing for Lynas Corporation Ltd. and was titled: Innovative processing for the technology metals market. With a record seven panelists, [click here](#) to see the following companies represented in this valuable dialogue and debate on technology metals extraction processing techniques: Jaye T. Pickarts, P.E., COO of Rare Element Resources Ltd.; Neil Izatt, IBC Advanced Technologies; Dr. David Dreisinger, Vice President, Metallurgy, Search Minerals Inc.; Patrick Wong, CEO & Director, Innovations Metals Corp.; Kiril Mugerma, President & CEO, GeoMegA Resources Inc.; Wes Berry, Vice President & CTO, K-Technologies, Inc.; and Cameron Davies, COO, Rare Earth Salts.
