

Kobo Resources' Paul Sarjeant on the discovery of a promising gold mine opportunity adjacent to an operational one in West Africa

written by InvestorNews | August 7, 2023

In a recent InvestorIntel interview, Tracy Weslosky spoke with Paul Sarjeant, the President, COO, and Director of Kobo Resources Inc. (TSXV: KRI) about insights into the exciting potential of Kobo's mining project in West Africa. Located approximately 20 km northwest of the capital city of Yamoussoukro and directly adjacent to one of the region's largest gold mines with established processing facilities, the excitement centers around Kobo's discovery of an underexplored and promising gold mine opportunity adjacent to an operational one in Côte d'Ivoire – Kobo's 100%-owned Kossou Gold Project.

TRU Reports High-Grade Gold Assay Results and Potential 4KM Gold Trend at its Golden

Rose Project in Newfoundland

written by InvestorNews | August 7, 2023

[TRU Precious Metals Corp.](#) (TSXV: TRU | OTCQB: TRUIF) (“TRU”) is a portfolio company of merchant bank [Resurgent Capital](#). TRU has assembled a portfolio of [several gold exploration properties](#) in the Central Newfoundland Gold Belt. TRU’s flagship project is the [Golden Rose Project](#) which lies just near [Marathon Gold’s](#) Valentine Project, which holds the largest undeveloped gold resource in Atlantic Canada.

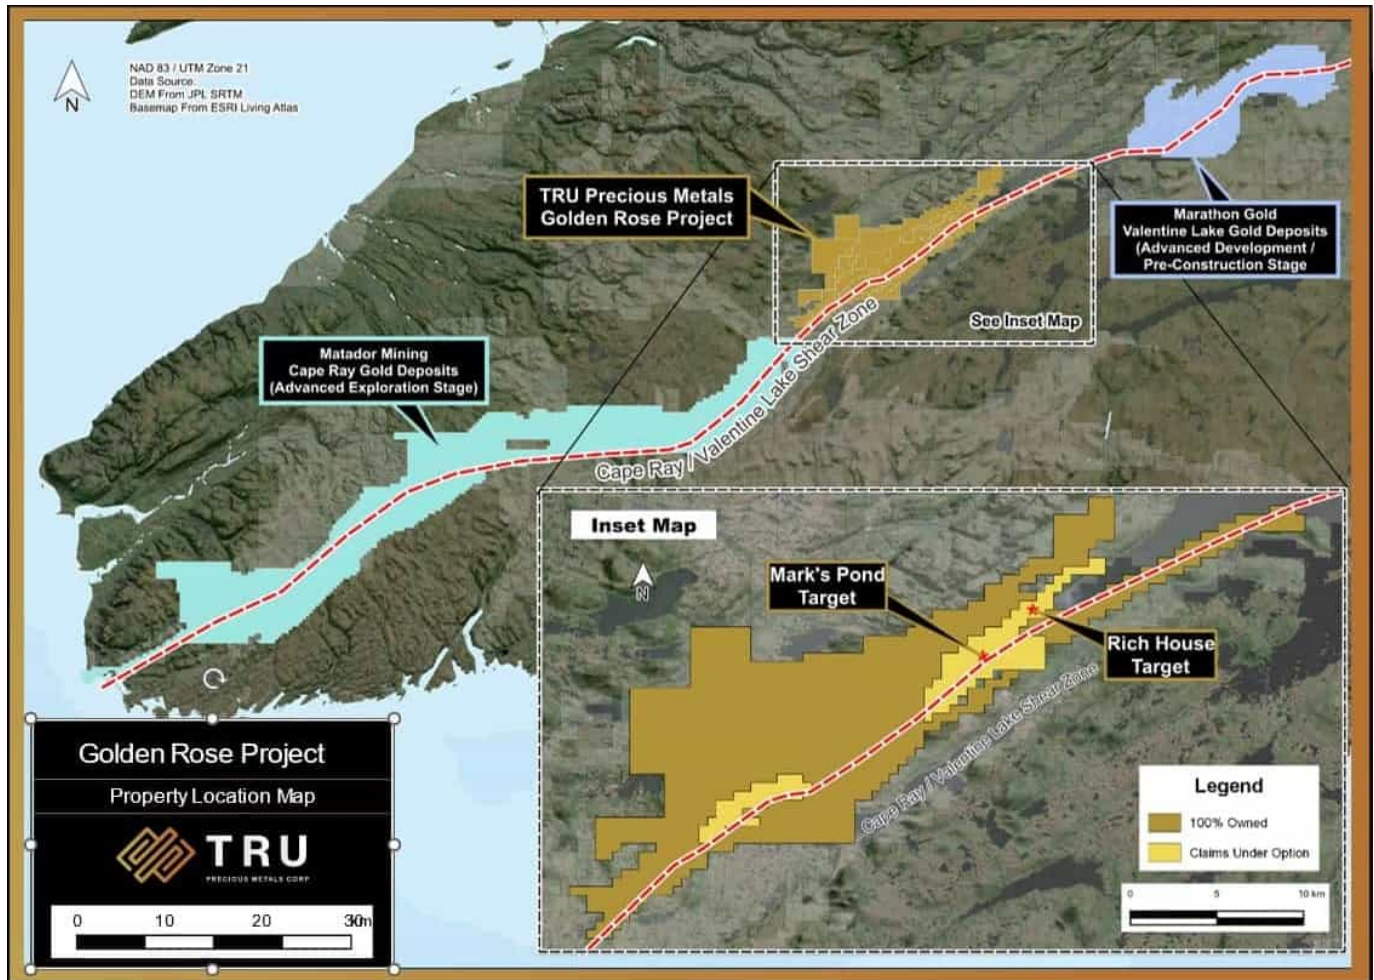

The Golden Rose Project

TRU owns 100% of the Golden Rose Project which is spread over a [236 km²](#) land package. The Project lies in the highly prospective Central Newfoundland Gold Belt between Marathon Gold’s Valentine Gold Project and [Matador Mining’s](#) Cape Ray Gold Project. Golden Rose covers a vast and largely under-explored land package and is transected by the Valentine Lake structural corridor, hosting over 45 km of prospective strike-length for gold and copper mineralization.

Key recent news at the Golden Rose Project is [a deal to extend the claims](#) with an option to acquire up to an aggregate 65% ownership interest in two claim packages covering 33.25 km² including a 12 km strike length along the Cape Ray – Valentine Lake Shear Zone (“Shear Zone”).

Even better news occurred on January 12, 2023, when TRU [reported](#) high-grade channel sampling results from Mark’s Pond Trench at the Golden Rose Project. The highlight results included 57.6 g/t gold (“Au”) over 2.5 meters (“m”), 34.0 g/t Au over 2.0 m & 23.5 g/t Au over 2.0 m. The Mark’s Pond target is located along the deposit-bearing Shear Zone.

Location Map: TRU's Golden Rose Project – Mark's Pond Target – Recent High-grade Gold Channel Results

Source: [TRU company announcement January 12, 2023](#)

Previously three bedrock grab samples from **Mark's Pond** returned [very high-grade gold assay results](#) including:

- 1929.0 g/t Au
- 205.6 g/t Au
- 180.1 g/t Au

Furthermore, grab samples collected at **Rich House** along the northern shore of Victoria Lake returned weighted average total gold values between [4.3 and 16.8 g/t Au](#).

Grab samples and trench sampling are only two early indicators of the area's potential; however these grades are superb and have certainly got the Company excited as you can see in this recent [InvestorIntel video](#).

The Northcott Gold Zone has the Potential to be a Company-making Discovery

The [2 to 3 m wide](#) northeast trending shear zone ("Northcott Gold Zone") contains abundant visible gold within quartz-carbonate veins.

TRU [stated](#):

"The Northcott Gold Zone remains open along strike to the southwest and northeast. This zone is potentially part of a larger scale, gold-endowed structural corridor located within the Mark's Pond target area, and potentially extending to the Rich House target 4 km to the northeast."

The Northcott Gold Zone at the Golden Rose Project: Potential of a Larger 4 km Trend from the Mark's Pond to Rich House Targets

Source: [Company presentation](#)

TRU plans to extend the trench further in both directions and complete detailed structural mapping of the entire trench and additional channel sampling in spring 2023 prior to drilling this zone.

TRU's Vice President of Exploration, Paul Ténrière, [commented](#):

"This is a very exciting time for TRU, and these excellent gold assay results from our recent channel sampling program help confirm our belief that the newly discovered Northcott Gold Zone is part of a larger scale, gold-endowed structural corridor located within the Mark's Pond target area, and potentially extending to the Rich House target 4 km to the northeast. The Northcott Gold Zone is not far from the high-grade Mark's Pond Gold Zone, and we anticipate further gold

discoveries along strike and to the northwest. The Mark's Pond – Rich House targets will be considered a high priority for our 2023 exploration program at Golden Rose including additional trenching, channel sampling, and drilling.”

Closing remarks

Finding new gold discoveries is never easy. In this case, TRU still has a long way to go in order to see if the Northcott Gold Zone is part of a larger scale, gold-endowed structural corridor, but so far it looks very promising with some very high-grade trenching sample and grab sample results. In 2023, the Company will continue trench sampling work to potentially extend the Northcott Gold Zone as well as help identify drill target areas.

TRU Precious Metals Corp. trades on a market cap of [C\\$6 million](#). 2023 could be a big year for TRU and potentially a company maker if significant gold discoveries follow.

VP EX Paul Teniere of TRU Highlights Recent High-Grade Gold Results and New Copper Discovery

written by InvestorNews | August 7, 2023

In this InvestorIntel interview, Chris Thompson talks to [TRU](#)

[Precious Metals Corp.](#)'s (TSXV: TRU | OTCQB: TRUIF) VP Exploration Paul Teniere about TRU's recent high-grade gold assay results (including 57.6 g/t gold over 2.5 metres and 34 g/t gold over 2 metres) from their Golden Rose Project in Central Newfoundland. Providing an update from channel sampling at their newly discovered Northcott Gold Zone on the Golden Rose Project, Paul explains what makes the zone a significant gold discovery for TRU.

Speaking about TRU's key exploration accomplishments in 2022, Paul discusses the geographic and geologic importance of their Golden Rose Project's location between two large gold deposits (Marathon Gold's Valentine Gold Project and Matador Mining's Cape Ray Gold Project). He goes on to provide an update on TRU's recently closed [private placement](#) the proceeds of which will be used to explore for critical minerals at the Jacob's Pond target area on the Golden Rose Project.

Joel Freudman talks about TRU Precious Metals' key location and coming gold and copper drill results

written by InvestorNews | August 7, 2023

In this InvestorIntel interview, host Tracy Weslosky talks to [TRU Precious Metals Corp.](https://www.sedar.com)'s (TSXV: TRU | OTCQB: TRUIF) Co-Founder, CEO & Director Joel Freudman about upcoming drill results and the key strategic location of its Newfoundland Golden Rose Project.

"The key value driver for us," Joel says, "is our Golden Rose Project in central Newfoundland. We're right between two gold

deposits – five million ounce Marathon Gold on one side, and they’re putting their mine into production in 2025, and the other side is Matador Mining with a significant gold resource. We control all the land between them.” This consolidation came about as a result of a recently announced option agreement that added the remaining smaller properties to TRU’s land package, which, he tells Tracy, “makes it a great turnkey project for potential acquirers down the road.”

Joel also tells Tracy that results from the summer 2000 meter drill program at the Jacobs Pond area of the Golden Rose Project are expected shortly, where the company “saw a lot of indications at surface for copper even bits of cobalt.” He believes that finding copper at Jacob’s Pond could be a good potential catalyst for TRU, diversifying its appeal and meriting a follow-on drill program.

With a gold resource update coming and drills at the ready, eyes are on Signature Resources

written by InvestorNews | August 7, 2023

A word of caution – I wrote this article before Jerome Powell's (U.S. Federal Reserve Chairman) latest commentary. Lately, every time he opens his mouth the market loves to interpret him to the extreme as either dovish or hawkish, moving the markets accordingly. So keep that in mind if what I'm saying is so yesterday. The reason for this disclaimer is that market action over the last couple of days indicates that gold has tested and held the US \$1,700(ish) support level. Yesterday saw most precious metal equities rally pretty hard, which is encouraging given a lot of them are trading at or near multi-year lows. Is this a sign of a new uptrend in the precious metals sector? One can hope. But without a copy of Mr. Powell's speech I will have to wait and see along with everyone else what happens next. Now I can write whatever I want because I have a built-in excuse – blame it on Powell – which I'm sure a lot of analysts, traders and fund managers have used excessively over the last year.

Fed policy aside, it does appear that the materials sector is very oversold and long overdue for a little love. Or perhaps just a relief rally, something, anything, to give shareholders a

bit of hope. Add a catalyst in a market that may be on the verge of recovery and perhaps we could even find gold investors in a good mood for a change.

One company that is working on a catalyst is [Signature Resources Ltd.](#) (TSXV: SGU | OTCQB: SGGTF), a Canadian-based advanced stage exploration company focused on expanding the 100% owned [Lingman Lake Gold Project](#), located within the prolific Red Lake district in Northwestern Ontario, Canada. The Lingman Lake gold property consists of 1,434 staked claims, four freehold fully patented claims and 14 mineral rights patented claims totaling approximately 27,113 hectares. The property includes what has historically been referred to as the Lingman Lake Gold Mine, an underground substructure consisting of a 126.5-metre shaft, and 3-levels at 46-metres, 84-metres and 122-metres depths.

Lingman Lake has a 234,000 ounce historical high-grade gold resource estimate that is contained within the first 180 meters of surface and open in all directions. But the looming catalyst for Signature Resources is a NI 43-101 initial resource estimate which is anticipated shortly. In an [update provided on June 29th](#) the company stated they were finalizing the compilation of the drill and assay database and doing 3D geologic modelling and analysis. A further [update on August 30th](#) included the positive news that the company had identified a low-cost opportunity to capture additional data to increase the quantity and quality of the geologic knowledge of the deposit. This in turn led to new gold zones being identified. This is particularly encouraging when you look at it in the context of some of the highlights from the exploration drilling undertaken in late 2021:

- 6.64 g/t Au over 3.0 meters in LM21-26; including 18.5 g/t Au over 1.0 meters
- 6.97 g/t Au over 2.0 meters in LM 21-25

- 7.07 g/t Au over 4.0 meters in LM21-27; including 11.9 g/t Au over 1.0 meters
- 3.54 g/t Au over 2.0 meters in LM21-28A
- 8.24 g/t Au over 2.0 meters from 90 to 92 meters downhole; including 10.10 g/t Au over 1.0 m from 90 to 91 meters downhole in drill hole LM21-30 in the Central Zone
- 7.14 g/t Au over 2.0 m from 99 to 101 meters downhole; including 10.50 g/t Au over 1.0 m from 99 to 100 meters downhole in drill hole LM21-30 in the Central Zone

Something quite intriguing about Signature Resources is the fact that they have two 100%-owned drill rigs and about 10,000 meters of drilling consumables to support their next-stage drill campaigns. This is quite the head start given that upon the completion of the initial resource estimate the company expects it will have a strong technical plan for advancing a successive round of exploration that concurrently to expand the resource envelope and address gaps within the current drill database; thus supporting timely updates to the resource model. Now we sit and wait, along with the company, for the completion of that resource estimate.

However, despite having the drill rigs, consumables and just under C\$1 million in cash, Signature still requires additional financing to pay for capital expenditures, exploration and administrative costs required to advance exploration on its Lingman Lake Gold Project. As long as the gold sector can continue to bounce off these lows, it should make it a lot easier for this C\$5.5 million market cap company to get out and raise the capital it needs to advance this project.

C'mon Mr. Powell, don't ruin this for us.

Will Sokoman Minerals be Eric Sprott's next Newfoundland gold success story?

written by InvestorNews | August 7, 2023

Every once in a while I find myself scanning through a company's website or press releases and then I have to pause for a moment and go back and re-read something. Instead of the usual content you expect to see, something jumps off the page and you have to make sure you read it correctly and that your eyes weren't playing tricks on you. Today's junior mining stock had me doing this a couple of times for several different reasons. The company is unusual (in a good way) and not simply because Eric Sprott beneficially owns 25% of the outstanding shares (even more if warrants are exercised). It also had nothing to do with its location, Newfoundland & Labrador, although that's why I was looking at it in the first place as I just happen to enjoy reading and writing about this special part of Canada.

The first thing that jumped off the page for me was "Approximately 48,000 metres remain to be completed in the current 100,000 m drill program". For a junior miner anywhere, that is a giant volume of drilling, which also means there has to be plenty of cash around as well. How about a treasure stocked with C\$13 million? Seems like enough to undertake such an enormous exploration program and as the Company states "sufficient funds to undertake all the exploration activities planned for 2022". The last thing that stood out was the number of projects being actively explored – 5. Most junior mining

companies don't have more than 2 or 3 properties to pursue, often only 1, and even more rare is the resources to be working on all these projects over the next 3-6 months.

Needless to say, I was hooked. I had to find out more about [Sokoman Minerals Corp.](#) (TSXV: SIC | OTCQB: SICNF), and let me tell, there is a lot more to learn. The Company's primary focus is its portfolio of gold projects; flagship [Moosehead Gold Project](#), [Crippleback Lake](#) (optioned to Trans Canada Gold Corp.) and [East Alder](#) (optioned to Canterra Minerals Corporation) along the Central Newfoundland Gold Belt, and the district-scale [Fleur de Lys project](#) in north-central Newfoundland. The Company also recently entered into a strategic alliance with [Benton Resources Inc.](#) (TSXV: BEX) through three, large-scale, joint-venture properties including [Grey River](#), [Golden Hope](#) and [Kepenkeck](#) in Newfoundland. Sokoman controls, independently and through the Benton alliance, over 150,000 hectares (>6,000 claims – 1500 sq. km), making it one of the largest landholders in Newfoundland, in Canada's newest and rapidly-emerging gold districts. The Company also retains an interest in an early-stage antimony/gold project ([Startrek](#)) in Newfoundland, optioned to White Metal Resources Inc., and in Labrador, the Company has a 100% interest in the [Iron Horse \(Fe\) project](#) which has Direct Shipping Ore (DSO) potential.

I'm still trying to figure out what metal or minerals Newfoundland & Labrador doesn't have as it seems the region has an abundance of everything. Along those lines, the Golden Hope JV with Benton made the [first high-grade lithium discovery](#) in Newfoundland in September, 2021. The [first assay results](#) from the drilling program that tested the Kraken pegmatite field returned an average of 0.95% Li_2O over 8.40 m with grades as high as 1.76% Li_2O . Not bad when you are looking for gold. The Alliance has proposed a C\$3 million budget for a summer drill program testing as many of the known pegmatite dykes as

possible, with up to 30-40 holes planned. Camp setup and drill mobilization are expected in mid-June.

But as interesting as this is, for today I think will focus on where the bulk of the drilling is being done, and that's the Moosehead Gold Project where visible gold has been intersected in drilling over a 2 km strike length. From 2018-2021 Sokoman completed ~73,000 m of drilling with ~360 holes, leading to the discovery of 4 significant zones, all of which remain open. Highlights from these zones rival some of the findings from their neighbors to the east, New Found Gold Corp. (TSXV: NFG | AMEX: NFGC) another Eric Sprott backed gold miner in Newfoundland:

Western Trend • MH-18-08 • 1.05 m @ 207.5g/t Au from 8.5 m; and 2.28 m @ 42.36 g/t Au from 33.1 m

Eastern Trend • MH-18-01 • 11.9 m @ 44.96g/t Au, including 5.65 m @ 93.56 g/t Au from 115.2 m

75 Zone • MH-21-23 • 44.8 m @ 17.56g/t Au, including 2.75 m @ 30.59g/t Au from 44.75 m

South Pond • MH-20-12 • 35.0 m of 26.87 g/t Au, including 2.15 m @ 60.59 g/t Au from 47.0 m

Heading into 2022 is where things get really exciting. [Results last week](#), some of the first holes from the 100,000 m 2022 program, expanded the 75 Zone and essentially linked it with the main Eastern Trend/Footwall Splay mineralization (see picture below). In addition, MH-22-418, completed last week (assays pending) intersected the deepest occurrence of visible gold to date on the property at a downhole depth of 352 m.

Source: Sokoman Minerals [May 19, 2022 Press Release](#)

It would appear there will be a steady stream of drilling results coming from Sokoman Minerals over the following weeks and months, not only from Moosehead, but Golden Hope and Grey River with JV partner Benton Resources Inc. There is a lot going on at this well funded, junior gold (and now lithium) explorer. With a market cap of C\$66 million it's not hard to imagine plenty of upside when one of your comparables is New Found Gold at a market cap of C\$1.2 billion.

In a week of losses the market seems to think Westward Gold might be on to something

written by InvestorNews | August 7, 2023

It's not often that you see a junior mining company release a general corporate update, with no new drill results, that sparks a 45% rally in the stock with a dramatic and sustained increase in daily volume. Especially over the last two weeks, which hasn't exactly been a "risk-on" type of market. Naturally, I was inclined to have a look and see what all the fuss was about.

It may come as no surprise that I had no idea what most of the somewhat technical press release was trying to convey. My commerce degree and business experience have not blessed me with the ability to interpret geologic concepts. I can grasp oz/tonne, true width, depth, inferred resource, etc. but that's all just math (which my degree and business experience did equip me to comprehend). But when it comes to hyperspectral imaging, induced polarization survey, or the role of compressional

structures on stratigraphy, you might as well be speaking another language, specifically one I don't understand. However, the market has spoken and the market is always right, so even though I may not understand it, it appears that it is pretty good news.

The company that has generated this recent buzz is [Westward Gold Inc.](#) (CSE: WG | OTCQB: WGLIF), a mineral exploration company focused on developing the [Toiyabe](#), [Turquoise Canyon](#), and [East Saddle](#) Projects located in the Cortez Hills area of Nevada. They've assembled a 3,830 hectare land package in the heart of Nevada's Battle Mountain-Eureka Gold Trend, one of the most prospective mining districts in the world, approximately 10 kilometers southwest of Barrick Gold Corp.'s Cortez Hills mine and adjacent to Barrick's past producing Toiyabe-Saddle Mine.

The press release that caught the market's attention was a seemingly run-of-the-mill [corporate update](#), but I guess the devil is in the details. I've already stated that a lot of the technical information was over my head but I'll try and interpret what made this particular update a little more special. It was a very thorough summary of the last year's activity, but there wasn't a lot of news that hadn't already been disclosed. As near as I can tell, only the IP Survey, possibly reinterpretation of legacy geophysical data, and the combination of this data, with previously disclosed information, to come up with new stratigraphic findings are new to the public domain. So the excitement must lie somewhere within there.

Highlights from the 17 line-kilometer IP Survey point to the main host rock at the Historical Resource at Toiyabe (~173 koz at 1.2 g Au/t) being interpreted to also be present at Turquoise Canyon, under only 150-250 meters of cover. The chargeability model confirms two near-term step-out targets at Toiyabe and further informs priority targets at Turquoise Canyon.

Reinterpretation of legacy geophysical data confirmed the IP findings related to the presence of favorable Lower Plate carbonates below the Upper Plate cover at Turquoise Canyon and further understanding of the geometry of the carbonate window and associated structures at Toiyabe. Certainly, positive news but even a layman like myself is struggling to find anything market-moving here.

Toiyabe-Saddle Mine North Pit. Source: Company website

That suggests it's all down to the new stratigraphic findings (or I've completely missed the boat on this one, which is entirely possible). Cross-section analysis provided for a new understanding of the role of compressional structures on stratigraphy, the dip of mineralization, and a potential link between mineralization at surface in the Toiyabe-Saddle open pits and at depth at Toiyabe. Repetition of favorable lithologies (stratigraphic duplex) appears to occur beneath the Historical Resource. The Company believes this confirms that gold mineralization is hosted in the Horse Canyon and Wenban Formations, which are documented gold hosts at the nearby Pipeline, Cortez Hills, Goldrush, and Fourmile deposits.

If that is the good news, I will always be late to the dance because I look for something more understandable (to me), like drill results, to get me excited. To that end, the Company is [proceeding](#) with a 12-15 hole, 4,000 meter [drilling campaign](#) scheduled to begin in June, focusing on several of the targets noted above. This initial drilling program is budgeted to be roughly US\$1 million, which leaves ample funds for Phase 2 drilling later in the year following the Company's recent [C\\$2.5 million financing](#), which closed in February.

At the end of the day, the market has spoken and people a lot more knowledgeable than me are suggesting Westward Gold might be

on to something in Nevada. With a market cap of only C\$10 million, this is another example of an almost free option on a company with an interesting next couple of months ahead of it.

Robert Vallis talks about Signature Resources' imminent NI 43-101 report and future expansion plans

written by InvestorNews | August 7, 2023

In this InvestorIntel interview with host Chris Thompson, [Signature Resources Ltd.](#) (TSXV: SGU | OTCQB: SGGTF) President, CEO, and Director Robert Vallis provides an update on the progress of a NI 43-101 resource estimate and highlights from the 2021 drill program for the Lingman Lake Gold Project in Ontario, Canada.

In the interview, which can also be viewed in full on the InvestorIntel YouTube channel ([click here](#)), Robert Vallis talks about the results from their 2021 drill program which showed mineralization open at depth, and the re-evaluation of historic exploration data at Lingman Lake leading to the decision to accelerate the publication of an initial [NI 43-101 resource estimate](#) now expected in May, 2022. He also provides an update on Signature Resources' recently closed oversubscribed \$2.4M [financing](#) and how the funds will be deployed.

Joel Freudman talks about gold and copper advances at TRU Precious Metals' Golden Rose Project

written by InvestorNews | August 7, 2023

In this InvestorIntel interview with host Byron W. King, [TRU Precious Metals Corp.](#)'s (TSXV: TRU | OTCQB: TRUIF) Co-Founder, CEO & Director Joel Freudman provides [an update](#) on the drill program at TRU's Golden Rose Project in Central Newfoundland.

In the interview, which may also be viewed on the InvestorIntel YouTube channel ([click here to subscribe](#)), Joel Freudman talks

about their Golden Rose Project's strategic location in Newfoundland, situated between two major gold deposits. With Eric Sprott and TSX listed Altius Minerals as the largest shareholders, Joel discusses TRU's new [IP survey results](#) and gold zone modelling from the Golden Rose Project which showed strong indications for copper in addition to gold.

To watch the full interview, [click here](#)

About TRU Precious Metals Corp.

TRU is on a mission to build long-term shareholder value, through prudent natural resource property development and transactions. Currently TRU is exploring for gold and copper in the highly prospective Central Newfoundland Gold Belt and has an option with TSX-listed Altius Minerals to purchase 100% of the Golden Rose Project. Golden Rose is a regional-scale 236 km² land package, including 45 kilometres of strike length along the deposit-bearing Cape Ray – Valentine Lake Shear Zone directly between Marathon Gold's Valentine Gold Project and Matador Mining's Cape Ray Gold Project.

**Focused on the potentially
greater rewards provided**

through the investment in emerging countries, Volcanic Gold Mines is in Guatemala

written by InvestorNews | August 7, 2023

With gold prices verging on US\$2,000/oz, currently [US\\$1,970/oz](#), it is not surprising that gold mining companies are circling the earth for gold. Today's company is looking at unlocking the potential in Guatemala, a country in Central America just south of Mexico.

[Volcanic Gold Mines Inc.](#) (TSXV: VG) ("Volcanic") is a gold and silver explorer focused on building multi-million-ounce gold and silver resources in under-explored countries. Volcanic's current focus is in Eastern Guatemala where the Company has an [option to](#) earn a 60% interest from JV partner Radius Gold Inc. in the Holly and Banderas Projects (and other areas in Guatemala) by spending the cumulative amount of US\$7.0 million on exploration. In addition, Volcanic has acquired a geochemical database that has been generated over 20 years of exploration in the region and has an exclusive right to acquire any mineral projects generated from the database.

The Holly Project

The Holly Project is located in eastern Guatemala in a region where there are world-class gold and silver mines/deposits. The Project is 50km by paved road to Bluestone's gold deposit which is under development. The Project has multiple high-grade quartz veins similar to the 'Escobal' and 'Cerro Blanco' deposits. In 2007 Goldcorp made the Escobal world-class silver discovery just 20 km away from the Holly Project. The Cerro Blanco discovery grew to [~3.5 million oz gold](#).

Previous shallow drilling intersected [encouraging results](#) including **4.58m @ 79.84 g/t gold and 5,053 g/t silver**. The Project is at an early stage of drilling with a goal to confirm the depth and strike extent of La Pena vein to establish a high-grade maiden resource.

On March 31, 2022, Volcanic [stated](#): “The gold and silver discovery we have made at Holly is significant. It is a high-grade vein deposit that could be mined from underground, causing very little surface disruption. It will not require a processing plant as in the near future there will likely be two mills in operation within trucking distance. We are in the process of concluding an inferred resource calculation and from that we will generate an approximate value of the deposit that has been discovered to date. Further, the deposit is open in all directions.....”

Guatemala has a new pro-mining government in place. The previous period led to mining closures as the past government was against mining. This still leaves some issues today for Volcanic; however Volcanic recently [stated](#) in an update that: “....it is clear that the Central government and Departmental government of Chiquimula support the Holly project and will work with Volcanic to regain the social license. Volcanic looks forward to a

resolution of the issues and a resumption of work at the project and corresponding news flow.”

The Banderas Project and other areas under the Radius Gold JV agreement

Volcanic [recently updated](#) investors that they are “actively reviewing the land position it optioned when we signed the agreement with Radius Gold Inc. on June 1st 2020. Several of the areas have been reviewed, some have been rejected and the concession applications canceled. To date, three have shown significant promise and the Company is going through the process of getting these concessions granted. There are many more areas to review and the work is ongoing.”

Closing remarks

As expected emerging countries come with greater risk and potentially greater reward. In the case of Guatemala, Volcanic is hoping to make a significant discovery and announce a high-grade maiden resource at the Holly Project in 2022. There is also further potential for discovery at the Banderas Project and three other concessions (not yet granted). Noting these all fall under the Radius Gold Inc. JV agreement. Volcanic is well-financed with about [C\\$7.5 million](#) in cash.

CEO Simon Ridgway has excellent in-country experience as you can learn more in this InvestorIntel interview [here](#), where he discusses Volcanic intent on building a multi-million ounce gold and silver resource.

Volcanic Gold Mines Inc. trades on a market cap of [C\\$15 million](#), which leaves plenty of potential upside if things go well in 2022. Stay tuned.
