Sitting adjacent to the prolific Cadillac Gold Trend, Granada Gold is traveling under the investment radar...

[Granada Gold Mine Inc.](#)'s (TSXV: GGM) ("Granada") recent drilling campaign is finding more reasonable grade gold, yet the stock price has been moving sideways and traveling under the investment radar for much of 2020. Many Granada investors must be wondering why and when will the market awaken to Granada's potential?

The Granada Gold Mine Project sits [adjacent to the prolific Cadillac Trend](#) in Quebec Canada that has produced over 75 million ounces of gold over the past 100 years

[Source](#)

Granada's news in 2020, when combined, could create an argument for a potential resource estimate increase. Here is a summary of the 2020 key gold news from Granada.

[October 21, 2020](#) – Drill results highlights:

- **3.66 g/t gold** over 26.5m in hole GR-20-110 from 35.2 to 61.7m. An excellent result.
- **5.25 g/t gold** over 3.0m in hole GR-20-109 from 60.0

to 63.0m.

- **2.62 g/t gold over 6.42m** in hole GR-20-101 from 34.5 to 40.5m.

September 30, 2020 – Drill result highlights:

- **5.64 g/t gold over 6.86m** in GR-20-10 from 364.64 to 371.50m.
- **4.26 g/t gold over 4.50m** in hole GR-20-13 from 290.50 to 295.00m

Frank J. Basa, P.Eng. stated: “The drill hole data under the pit-constrained resource could potentially change the economics of developing the Granada Mine Property. Previously explored as a low-grade, open pit deposit, **the company now envisions an open pit with a ramp from the bottom of the pit into the higher-grade mineralization below, significantly adding more ounces to the current resource.**”

August 11, 2020 – **55.56 g/t gold over 3m** from 1,220 kg surface grab sample. The grade was very high because the grab sample collected the ‘native gold’. See more on this below.

March 2, 2020 – Two near-surface mineralized zones with drill results grading:

- **11.53 g/t gold over 2.9 meters** at core length 65.85 – 68.75m.
- **2.61 g/t gold over 24.7 meters** at core length 25.5 – 50.2m.

January 9, 2020 – **11.45 g/t gold over 33 meters.**

Taken individually it is perhaps understandable that the market has not yet reacted overly positively. However, when we add up all the incremental good news for 2020 we start to see a very positive picture. Since July 2020, Granada has appointed

Innovexplo to update their [43-101 Resource Study](#) at the Granada Gold Mine property. Given the last resource update was done almost 2 years ago (Feb. 2019) then there is plenty of new drill results to be factored into an updated resource. The 2019 NI 43-101 [report](#) included an updated 'pit constrained resource' estimate of [762,000 ounces of gold @ 1.06 g/t Au](#) in the Measured and Indicated categories, plus 455,000 ounces of gold @ 2.04 g/t Au in the Inferred category.

Granada also state in their October 2020 [company presentation](#): "Resource upgrade underway –will include 2019-20 drill/sampling results" and "study begun on requirements to amend current open-pit mining permits for an on-site mill at Granada."

The other factor to consider is the 'native gold' component which tends not to show up in the drill results. Native Gold is the natural gold to the area and does not include the gold found in the sulphide deposits. **The native gold component has been defined for the Granada Gold Mine to represent an average of [50%](#) of the recoverable gold from the mineralized deposit.**

Frank J. Basa, P.Eng., Granada Gold's President and CEO, [commented](#): "Historically, the mill grades at Granada Mine were higher than drill grades. This is common with high-grade native gold concentration deposits on the Cadillac Trend – as it is with this deposit. The 1220-kg sample returned 4 times the drill grade of the core – using only the native gold component."

## Granada Gold's history

## Closing remarks

When combining Granada's 2020 results we see a steady flow of

solid gold drill results and a great grab/small sample result of 55.56 g/t gold. The later is mostly due to the Granada property having significant native gold that drill results miss and bulk sample results collect. Combining all of this with good results in 2019 I would expect Granada will soon announce a potentially significant resource upgrade. Looking further out there is a strong possibility of a super low CapEx ([C\\$6.7M](#)) start-up pit (not including a mill) and further exploration upside as about 80% of Granada's potential 5.5 km east-west strike length remains unexplored. Granada is also looking at options and permitting for an onsite mill.

At a the current market cap of C\$17M and sitting adjacent to the prolific Cadillac Gold Trend, a growing resource, and being permitted for a [550tpd](#) open pit operation, investors would be wise to take a second look at Granada Gold Mine Inc.
