

Frank Basa on restructuring Granada Gold's project to a high-grade deposit

written by InvestorNews | February 18, 2021

In a recent InvestorIntel interview, Tracy Weslosky spoke with Frank Basa, President, CEO, and Director of [Granada Gold Mine Inc.](#) (TSXV: GGM) about restructuring its Granada gold project to a high-grade deposit.

In this InvestorIntel interview, which may also be viewed on YouTube ([click here to subscribe to the InvestorIntel Channel](#)), Mr. Basa said that with the recent release of new resource numbers, Granada Gold has converted the previous low-grade 1 g/t Au open pit to a [higher-grade deposit](#) with a combined smaller 2 g/t open pit and a potentially much larger 4 g/t underground. The company intends to continue with its 120,000 meter drill program to significantly upgrade the resource to about 2.5-3 million ounces, the majority of which will be underground at 4 g/t. "4 g/t underground on the Cadillac Break, very few people have that," said Mr. Basa.

He also commented on the competitive advantages of the Granada gold project's location on the Cadillac Break. "The majors are showing up. They are looking for companies...If we hit 2.5-3 million ounces...we are looking at ourselves as a takeout target," said Mr. Basa.

About Granada Gold Mine Inc.

Granada Gold Mine Inc. continues to develop the Granada Gold Property near Rouyn-Noranda, Quebec. Approximately 120,000

meters of drilling has been completed to date on the property, focused mainly on the extended LONG Bars zone which trends 2 kilometers east-west over a potential 5.5 kilometers of mineralized structure. The highly prolific Cadillac Break, the source of more than 75 million plus ounces of gold production in the past century, cuts through the north part of the Granada property, but is not necessarily indicative of mineralization hosted on the company's property.

The Granada Shear Zone and the South Shear Zone contain, based on historical detailed mapping as well as from current and historical drilling, up to twenty-two mineralized structures trending east-west over five and a half kilometers. Three of these structures were mined historically from two shafts and two open pits. Historical underground grades were 8 to 10 grams per tonne gold from two shafts down to 236 m and 498 m with open pit grades from 5 to 3.5 grams per tonne gold.

Granada Gold's Frank Basa reveals "The more we drill, the more gold we find"

written by InvestorNews | February 18, 2021

[Granada Gold Mine Inc.](#) (TSXV: GGM) ('Granada') continues to have success drilling for gold at their Granada Property situated in

the heart of the famous Abitibi Greenstone Belt and along the prolific “Cadillac Trend”, in Quebec, Canada. Granada’s latest plan is to target drilling 120,000 meters with a goal of developing a smaller, higher grade (potentially 3-5 g/t Au) open pit resource followed by an underground (potentially 4-5 g/t Au) resource, assuming further drilling success and economics work out to be favorable.

On January 29, 2021 Granada [released](#) a new updated high grade Mineral Resource Estimate (base case) for their Granada Gold deposit as shown below. The result was a **M&I Resource estimate of 449,000 ounces Au @2.34 g/t, and Inferred 266,000 ounces @6.46 g/t.**

[Source](#)

Granada also recently reported some promising grades from their first phase of the current drilling program.

[Announced](#) January 7, 2021, the best results were:

- **7.9 g/t gold over 3.0m** in hole GR-20-121 from 15.0 to 18.0m
- **6.45 g/t gold over 4.5m** in hole GR-20-122 from 0.0 to 4.5m
- **3.43 g/t gold over 20.5m** in hole GR-20-126 from 0.0 to 20.5m.

Granada [quoted](#) in the announcement:

“The program is progressing as expected with the intention of converting the current low-grade open pit resource at 1 gram per tonne to a smaller, higher grade open pit with the majority of the future potential ounces in a resource underground. The company has now increased the drill program to 18,000 meters with a target of 120,000 meters to be drilled.”

[Announced](#) December 18, 2020 best results were:

- 2.39 g/t gold over 29m in hole GR-20-111 from 0.0 to 29.0m.
- **7.72 g/t gold over 4.5m** in hole GR-20-112 from 31.0 to 35.5m.
- **7.29 g/t gold over 5.02m** in hole GR-20-117 from 49.21 to 54.23m.

These results were solid as some gold was found from surface, there were good grades and reasonable grade lengths. The above results build support for Granada's new plan to build a higher grade resource.

[Source](#)

The following President's words are 'music to investor's ears'

Frank J. Basa, P.Eng., President and CEO., [stated](#): "The short-hole drill program, with its 3 objectives, has succeeded in defining further extension of the **high-grade zones** eastward, **near surface.....The more we drill, the more gold we find...**We are pleased to have intersected high-grade structures in GR-20-117 where it has intersected the **continuity** of the **very high-grade bulk zone** at Granada – evidenced by the presence of visible gold."

Note: Emphasis by the author.

As gold investors we love to hear the phrases "high grade gold", "near surface", "continuity", and "very high grade bulk zone". All of this once the drilling has been completed, if successful, typically leads to significant resource upgrade, and at the PEA or PFS stage, a potentially economically viable project. Now Granada is not there yet, but this is the path they are now

progressing towards.

A background on Granada Gold

The Granada Gold Property is located 5 km south of the historic mining community of Rouyn-Noranda, Quebec, on the Cadillac gold Trend. It was first acquired by Granada in 2006. The 2019 NI 43-101 [report](#) included an updated 'pit constrained resource' estimate of [762,000 ounces of gold @ 1.06 g/t Au](#) in the Measured and Indicated categories, plus 455,000 ounces of gold @ 2.04 g/t Au in the Inferred category. This estimate is now less applicable following the change of plan to establish a higher grade resource; however it does remain useful to know especially if we see higher gold prices in the future.

The Granada Gold Property has plenty of further exploration upside as only about 20% of Granada's potential 5.5 km east-west strike length has been explored to date.

Next steps

In a recent [InvestorIntel interview](#), CEO Frank Basa explained that Granada Gold now plans to work towards a next resource update by about Q2, 2022. He states that the target for the Granada Deposit is around 300,000 oz Au open pit, and 2 million ounces underground, all at grades in the 3-5 g/t Au range. If successful, CEO Basa explains they would then be a takeover target similar to what happened previously with Monarch Gold, who was taken over by Yamana Gold for approximately C\$200 million (included the Beaufor mine, the McKenzie Break property, the Croinor Gold property, the Swanson property and the Beacon Gold mill and property).

Closing remarks

Granada Gold Mine Inc. still trades on a market cap of only C\$20

million, which is probably explained by the fact that Granada has not yet delivered a large high grade resource or reserve. However Granada is now rapidly moving in that direction with their M&I 449,000 ounces Au @2.34 g/t announced last week. Recent drill results continue to successfully find reasonable grade gold not too far from surface, which bodes well for the future.

Long term investors have indeed been patient but it is looking like Granada Gold Mine Inc. is potentially now much closer to achieving a sizable high grade resource than ever before. Stay tuned for more results throughout the year.

Frank Basa on Granada Gold's key positioning in Quebec's Cadillac Trend and the 2021 Gold Market

written by InvestorNews | February 18, 2021

In a recent InvestorIntel interview, Tracy Weslosky speaks with Frank Basa, Director, President and CEO of [Granada Gold Mine Inc.](#) (TSXV: GGM) discusses their key positioning in Quebec's Cadillac Trend, the rising value of gold and how this will translate into the marketplace in 2021.

In this InvestorIntel interview, which may also be viewed on

YouTube ([click here to subscribe to the InvestorIntel Channel](#)), Frank responds to Tracy's questions about Matt Bohlson's [article on why they may be 'flying under the investment radar'](#) with, "We are on the Cadillac break, and of course anybody who is on the Cadillac break usually ends up with a multi-million-ounce deposit, which we did get."

Frank goes on to explain changes that will positively affect the economics for Granada Gold, the impact of the gold market on the M&A market and adds **"This is just the beginning of a long bull market for gold, and with our location; our infrastructure – we're in a great position."**

About Granada Gold Mine Inc.

Granada Gold Mine Inc. is continuing to develop the Granada Gold Property near Rouyn-Noranda, Quebec. The property includes the former Granada gold mine which produced more than 50,000 ounces of gold at 10 grams per tonne gold in the 1930's before a fire destroyed the surface buildings. Approximately 120,000 meters of drilling has been completed to date on the property, focused mainly on the extended LONG Bars zone which trends 2 kilometers east west over a potential 5.5 kilometers mineralized structure. The highly prolific Cadillac Trend, the source of 50 million plus ounces of gold production in the past century, cuts right through the north part of the Granada property on a line running from Val-d'Or to Rouyn-Noranda Quebec.

The Company is in possession of all permits required to commence the initial mining phase known as the "Rolling Start", which allows the company to mine up to 550 tonnes per day, capable of producing up to 675,000 tonnes of ore over a 3-year period of time. Additional information is available at www.grnadagoldmine.com.

Sitting adjacent to the prolific Cadillac Gold Trend, Granada Gold is traveling under the investment radar...

written by InvestorNews | February 18, 2021

Sitting adjacent to the prolific Cadillac Gold Trend, Granada Gold is traveling under the investment radar...

[Granada Gold Mine Inc.](#)'s (TSXV: GGM) ("Granada") recent drilling campaign is finding more reasonable grade gold, yet the stock price has been moving sideways and traveling under the investment radar for much of 2020. Many Granada investors must be wondering why and when will the market awaken to Granada's potential?

The Granada Gold Mine Project sits [adjacent to the prolific Cadillac Trend](#) in Quebec Canada that has produced over 75 million ounces of gold over the past 100 years

[Source](#)

Granada's news in 2020, when combined, could create an argument

for a potential resource estimate increase. Here is a summary of the 2020 key gold news from Granada.

October 21, 2020 – Drill results highlights:

- **3.66 g/t gold over 26.5m** in hole GR-20-110 from 35.2 to 61.7m. An excellent result.
- **5.25 g/t gold over 3.0m** in hole GR-20-109 from 60.0 to 63.0m.
- **2.62 g/t gold over 6.42m** in hole GR-20-101 from 34.5 to 40.5m.

September 30, 2020 – Drill result highlights:

- **5.64 g/t gold over 6.86m** in GR-20-10 from 364.64 to 371.50m.
- **4.26 g/t gold over 4.50m** in hole GR-20-13 from 290.50 to 295.00m

Frank J. Basa, P.Eng. [stated](#): “The drill hole data under the pit-constrained resource could potentially change the economics of developing the Granada Mine Property. Previously explored as a low-grade, open pit deposit, **the company now envisions an open pit with a ramp from the bottom of the pit into the higher-grade mineralization below, significantly adding more ounces to the current resource.**”

August 11, 2020 – **55.56 g/t gold over 3m** from 1,220 kg surface grab sample. The grade was very high because the grab sample collected the ‘native gold’. See more on this below.

March 2, 2020 – Two near-surface mineralized zones with drill results grading:

- **11.53 g/t gold over 2.9 meters** at core length 65.85 – 68.75m.
- **2.61 g/t gold over 24.7 meters** at core length 25.5 –

50.2m.

January 9, 2020 – 11.45 g/t gold over 33 meters.

Taken individually it is perhaps understandable that the market has not yet reacted overly positively. However, when we add up all the incremental good news for 2020 we start to see a very positive picture. Since July 2020, Granada has appointed Innovexplo to update their [43-101 Resource Study](#) at the Granada Gold Mine property. Given the last resource update was done almost 2 years ago (Feb. 2019) then there is plenty of new drill results to be factored into an updated resource. The 2019 NI 43-101 [report](#) included an updated 'pit constrained resource' estimate of [762,000 ounces of gold @ 1.06 g/t Au](#) in the Measured and Indicated categories, plus 455,000 ounces of gold @ 2.04 g/t Au in the Inferred category.

Granada also state in their October 2020 [company presentation](#): "Resource upgrade underway –will include 2019-20 drill/sampling results" and "study begun on requirements to amend current open-pit mining permits for an on-site mill at Granada."

The other factor to consider is the 'native gold' component which tends not to show up in the drill results. Native Gold is the natural gold to the area and does not include the gold found in the sulphide deposits. **The native gold component has been defined for the Granada Gold Mine to represent an average of [50%](#) of the recoverable gold from the mineralized deposit.**

Frank J. Basa, P.Eng., Granada Gold's President and CEO, [commented](#): "Historically, the mill grades at Granada Mine were higher than drill grades. This is common with high-grade native gold concentration deposits on the Cadillac Trend – as it is with this deposit. The 1220-kg sample returned 4 times the drill grade of the core – using only the native gold component."

Granada Gold's history

[Source](#)

Closing remarks

When combining Granada's 2020 results we see a steady flow of solid gold drill results and a great grab/small sample result of 55.56 g/t gold. The later is mostly due to the Granada property having significant native gold that drill results miss and bulk sample results collect. Combining all of this with good results in 2019 I would expect Granada will soon announce a potentially significant resource upgrade. Looking further out there is a strong possibility of a super low CapEx ([C\\$6.7M](#)) start-up pit (not including a mill) and further exploration upside as about 80% of Granada's potential 5.5 km east-west strike length remains unexplored. Granada is also looking at options and permitting for an onsite mill.

At a the current market cap of C\$17M and sitting adjacent to the prolific Cadillac Gold Trend, a growing resource, and being permitted for a [550tpd](#) open pit operation, investors would be wise to take a second look at Granada Gold Mine Inc.

Disclosure: The author is long Granada Gold Mine Inc. (TSXV: GGM).

New drill and bulk sample gold results to drive updated resource estimate for Granada Gold

written by InvestorNews | February 18, 2021

Initial bulk sample returns **55.6 grams per tonne native gold**

Granada Gold's summer drilling program is coming to an end with drill results and larger bulk sample results expected to follow. Given some of the past high-grade results, such as the recent small bulk sample returning [55.6 g/t](#) native gold, investors are looking forward to the results of the new exploration with anticipation.

[Granada Gold Mine Inc.](#) (TSXV: GGM | OTC: GBBFF) ('Granada') 100% owns the approximately 1,400 hectare Granada Gold Property, which includes the former Granada Gold Mine which produced more than 50,000 ounces of gold in the 1930s before a fire destroyed the surface buildings in 1935. Historic underground production between 1930 and 1935 from two shafts in the area had an average grade of 9.7 g/t gold and 1.5 g/t silver. About 80% of Granada Gold's potential 5.5 km east-west strike length remains unexplored, leaving plenty of room for future exploration expansion.

Investors familiar with gold know that the 'Cadillac Break Trend' in Quebec, Canada, is possibly the best gold address in the world, producing more than [75 million ounces of gold](#) over the past 100 years, and the immediate area has produced over [140](#)

[million ounces of gold.](#)

Preparatory work for bulk sampling at Granada Gold Property – Spring 2020

[Source](#)

First small bulk sample result – August 2020

In recent news Granada [announced](#) a small bulk grab sample reporting “**55.6 grams per tonne native gold** from 1,220 kilograms of mineralized material taken from surface over a 3-meter strike length on Vein No 1 structure where diamond drill hole GR-19-A intersected 11.45 g/t gold from 0 to 33 metres core length.”

Anything above 5 g/t is considered high grade, so 55.6 g/t is an impressive result and may bode well for larger bulk sampling in the area. Also it is worth noting that due to using conventional gravity concentration only native gold was recovered and quantified. The gold-bearing sulfides were not recovered. Native Gold is the natural gold to the area and does not include the gold found in the sulphide deposits. The native gold component has been defined for the Granada Gold Mine to represent an average of 50% of the recoverable gold from the mineralized deposit.

Granada Gold President and CEO, Frank J. Basa, [comments](#): “A bulk sample is to be taken at this location to further quantify the grade of the mineralized material. The company is awaiting quotes from local contractors to take this bulk sample,” with the bulk sample to be processed at Temiskaming Testing Labs in Cobalt, Ontario.

Drill results expected soon

Drill results are pending from Granada's summer exploration campaign (June through August, 2020). Granada is focusing on the high-grade Vein No 1 structure. The mineralized structure has been traced on surface for over 115 meters on east-west trend by stripping. The structure extends over 500 meters when connected by the pierce points with the drill holes. Drill results [reported in January, 2020](#) returned **11.45 g/t gold over 33 meters** which sent the stock price up [62.5%](#).

Granada Gold's existing resource and an updated resource on the way

In February 2019, the Company filed a NI 43-101 compliant [technical report](#) announcing an updated pit constrained resource estimate of [762,000 ounces of gold @ 1.06 g/t Au](#) in the Measured and Indicated categories, plus 455,000 ounces of gold @ 2.04 g/t Au in the Inferred category.

Granada Gold's 2019 NI 43-101 updated pit-constrained Resource estimate (surface pit only)

[Source](#)

In July Granada announced that it had retained Innovexplo to update their [43-101 Resource Study](#) at the Granada Gold Mine property. Granada is currently drilling key holes aimed at increasing underground resources quality below existing pit constrained mineral resources, which is intended to augment the revised resource estimate now underway. Granada's President and CEO Frank J. Basa explained that the company "decided that a revised 43-101 should be undertaken at this stage to better reflect the potential of the resource."

Closing remarks

What has caught the market's imagination is Granada Gold's potential for a very low cost shallow starter open pit gold mine with already good grades, with the possibility of resource expansion and higher grades from additional exploration. Most open pit gold mines today are in the 0.5-2.0 g/t range, and Granada's un-updated resource estimate already puts it comfortably in that zone. The CapEx for this starter pit is estimated at only C\$6.7m and assumes the processing would be done at a nearby mill. Before that happens Granada Gold needs to further prove up the resource, which is what they are working on now with additional bulk sampling and drilling.

Open-pit permits are already in place for a "Rolling Start" 550 t/day operation by Granada. Milling may be done locally or perhaps on site if funds were raised to support this. Infrastructure is excellent with proximity to 10 gold mills, an established mining labor market, and the electrical grid nearby. Management is very experienced and has stated a [goal](#) for further resource expansion and plans for scalable possible future production.

It has taken 10 years for Granada Gold to get to where they are today, so patience may be the key for current investors. The good news for new investors is that most of the hard work has been done and a small scale starter pit operation may not be too far away now. With a current market cap of just C\$21m, there appears to be room to grow, especially with gold at [US\\$1,940/oz](#).

Disclosure: The author is long Granada Gold Mine Inc. (TSXV: GGM)

Frank Basa on the competitive advantages of Granada's high grade gold mine

written by InvestorNews | February 18, 2021

"We are on the Cadillac Trend. If there is any address that you should be on in North America or Canada is the Cadillac trend. It is known for producing multi million ounce deposits. Over 140 million ounces have been mined in the immediate area. Any deposit that anybody has ever worked on the Cadillac Trend has found lots of gold, high recoveries, high grades. That's the norm. Our project is also the same. When it was operated, it was about 9.7 grams per ton..." States Frank Basa, President, CEO and Director of [Granada Gold Mine Inc.](#) (TSXV: GGM), in an interview with InvestorIntel's Tracy Weslosky.

Frank went on to say that Granada Gold is ready to ride the wave of rising gold prices. Frank also said that the company has discovered at-surface mineralized structures with significant visible gold at its Granada Mine. Granada Gold has decided that the local mills would not be able to process this mineralized material without a significant modification of the process flowsheet to recover this amount of visible gold. Granada Gold has appointed Tetra Tech to begin a gap analysis to amend the current Certificate of Authorisation for an on-site mill at Granada Mine.

Frank Basa on intersecting high-grade gold near surface at Granada Gold Property

written by InvestorNews | February 18, 2021

“The deposit that we have was actually mined as a high-grade mine historically. Was about 10 grams a ton...The previous operator took out 14,500 ounces at 5 grams a ton. We decided to work on that extension going east...We are getting grades like 11-13 grams a ton. We are going to carry out near surface drill program and extend that. The structure is 5.5 km long and we have looked at only 500m of it. We are shovel ready. We have all the permits and we can ship the rock anytime to any mill in Quebec.” States Frank Basa, President, CEO and Director of [Granada Gold Mine Inc.](#) (TSXV: GGM), in an interview with InvestorIntel’s Tracy Weslosky.

Frank went on to say that its not normal to have to an open pit mine grading 5 grams a ton as most mines have about 1 gram a ton. He added the mine doesn’t have any overburden. Frank also provided an update on Granada Gold’s latest drill results. He said that the drill results were very good. The company drilled 33 meters of over 10 grams a ton near the surface.

Granada Gold's Frank Basa on the beginning of a gold cycle and 'very good high grade results'

written by InvestorNews | February 18, 2021

"I think we are significantly undervalued. We believe that there is a gold cycle beginning...We started a very nice drill program. We have got some very good high grade results. I think we will give a very good story to the market from our property which is on Cadillac trend." States Frank Basa, President, CEO and Director of [Granada Gold Mine Inc.](#) (TSXV: GGM), in an interview with InvestorIntel's Tracy Weslosky.

Frank went on to say that the Granada Gold team is a group of people who are from the industry. The team is well seasoned and has worked all over the world. Frank also said that the Granada Gold Property is a premier exploration and development project on the prolific Cadillac trend. The mine is a former producer which used to operate at 8 to 10 g/t. The project has good infrastructure and is close to 10 gold mills.
