

Assay results to guide Azincourt Energy discoveries at its East Preston uranium project

written by InvestorNews | April 29, 2022

[Azincourt Energy Corp.](#) (TSX: AAZ | OTCQB: AZURF) (Azincourt) is a junior miner focused on uranium in the world-renowned Athabasca Basin, Saskatchewan, Canada. They also have some uranium and lithium projects in Peru which they recently agreed [to option out](#) to Oberon Uranium Corp.

Azincourt has recently [completed](#) a 5,004m 19 drill hole winter program at their East Preston Project, in the Athabasca Basin, Saskatchewan, Canada. Assay results are expected from April to June, 2022. Azincourt stated in their [news release](#): “With the discovery of at least 1,700 meters of extensive hydrothermal alteration and elevated radioactivity, the Company considers the results of this program to be highly significant.” On the north-south trending K-Zone a “zone of localized elevated radioactivity more than 10 times background values was identified in EP0035 from both handheld scintillometers and a downhole gamma probe.”

Azincourt President and CEO, Alex Klenman, [stated](#): “The discovery of these alteration zones, both along the same trend, covering almost two kilometers of ground within these two separate zones, is a very important development... With 5,000 meters of drilling we were able to establish 1,700 meters of alteration, that’s a pretty good ratio. We know that alteration is associated with uranium deposition, acting as a halo proximal to deposition. The area in and around these zones is now a clear

priority for continued drilling. The assay results will give us a really good idea of what we're into and we're eager to see what comes back from the lab."

Azincourt VP, Exploration, Trevor Perkins, [stated](#): "The results from the winter drilling program are very encouraging... The extensive alteration zones and elevated radioactivity are significant signs that we are on the right track. Alteration and structure continue to be the key features to guide us towards discovery..."

Translated for those investors not so familiar with mining terminology, the drill results at the East Preston Project are very promising and point toward the potential discovery of uranium; however, we won't know for sure until we get the assay results from April to June, 2022.

Location map showing Azincourt's tenements at the East Preston Project and nearby projects and mines (including Cameco) in Canada's renowned high grade uranium Athabasca Basin

Source: [Azincourt Energy Corp.](#)

\$5.1 million Private Placement and 2.5-to-1 Share Consolidation

In what appears to be another positive indicator for Azincourt, not long after completing their East Preston drill program, they were able [to raise C\\$5,101,000 in a non-brokered private placement](#) with institutional investors. Azincourt also completed a [2.5-for-1 share consolidation](#).

More about Azicourt Energy and their 3 projects

Azincourt's projects include:

- [East Preston Project](#) (72% interest) – A uranium project in the Athabasca Basin, Saskatchewan, Canada.
- [Hatchet Lake Uranium Project](#) (earning into a 75% interest) – A uranium project in the Wollaston–Mudjatik Transition Zone area of Saskatchewan, Canada. Some details [here](#).
- [Escalera Group Project](#) (100% owned, LOI [to option out](#) to Oberon Uranium Corp.) – A uranium and lithium group of projects (Lituania, Condorlit, Escalera) in Puno, Peru.

Closing remarks

Azincourt has put in the work to identify and now drill numerous positive uranium targets at their 72% JV East Preston Uranium Project. The Athabasca Basin region is known to have the highest grade uranium in the world. This means if a company can find significant high-grade uranium in the region it can be a company making event.

Azincourt Energy Corp. trades on a market cap of only [C\\$34 million](#). Fingers crossed as we await assay results expected very soon.

Dev Randhawa provides an update on Fission 3.0 and discusses uranium and sustainability

written by InvestorNews | April 29, 2022

In a recent InvestorIntel interview, Tracy Weslosky interviews

[Fission 3.0 Corp.](#)'s (TSXV: FUU | OTCQB: FISOF) Chairman and CEO Dev Randhawa regarding an update on the Company's 16 projects in the Athabasca Basin region of Saskatchewan, Canada. The Athabasca Basin has the highest-grade uranium deposits in the world.

In the interview, which may also be viewed on the InvestorIntel YouTube channel ([click here to subscribe](#)), Dev Randhawa comments on the current 4,000m seven hole winter [drill program](#) on its 100% owned Patterson Lake North (PLN) project in the southwest Athabasca Basin region. Dev discusses his team's history of exploration success and how they are working towards having a third success with Fission 3.0. Dev shares his views on the current uranium market which is running hot right now. He discusses the need for strong uranium long-term contract pricing and the possibility of Sprott Physical Uranium Trust becoming listed on the NYSE. He also discusses the implications of sanctioning Russian sourced uranium due to the Russian invasion of Ukraine.

Dev gives a most interesting interview which is well worth watching. To watch the full interview, [click here](#)

About Fission 3.0 Corp.

Fission 3.0 Corp. is a uranium project generator and exploration company, focusing on projects in the Athabasca Basin, home to some of the world's largest high-grade uranium discoveries. Fission 3.0 currently has 16 projects in the Athabasca Basin. Several of Fission 3.0's projects are near large uranium discoveries, including the Arrow, Triple R and Hurricane deposits.

Dev Randhawa on Fission 3.0's private placement and the uranium market

written by InvestorNews | April 29, 2022

In a recent InvestorIntel interview, Peter Clausi spoke with Dev Randhawa, Chairman and CEO of [Fission 3.0 Corp.](#) (TSXV: FUU | OTCQB: FISOF) about [the upsizing](#) of Fission 3.0's recently announced private placement due to significant investor demand and about why "there could be a massive move in uranium next year."

In this InvestorIntel interview, which may also be viewed on YouTube ([click here to subscribe to the InvestorIntel Channel](#)), Dev Randhawa went on to talk about the current uranium market and why uranium is essential to achieve net zero-emission goals. He also explained how the new Sprott Physical Uranium Trust and billionaires Warren Buffett and Bill Gates backing a \$4 billion nuclear power plant in Wyoming are indications that the uranium sector is on the rise. Led by an experienced team that has found two uranium deposits before, Randhawa said that Fission 3.0 is close to making a major discovery at its Patterson Lake North project.

Dev Randhawa on the uranium market, and Fission 3.0 staking two new properties in the Athabasca Basin

written by InvestorNews | April 29, 2022

In a recent InvestorIntel interview, Tracy Weslosky spoke with Dev Randhawa, Chairman and CEO of [Fission 3.0 Corp.](https://www.fission30.com) (TSXV: FUU | OTCQB: FISOF) about [staking two new properties](#) in the Athabasca Basin, which have the potential for near-surface high-grade uranium deposits

In this InvestorIntel interview, which may also be viewed on YouTube ([click here to subscribe to the InvestorIntel Channel](#)), Dev discusses Fission 3.0's recent raises and how these funds will be directed. Tracy inquires about a wide range of

increasing interest in uranium from a wide spectrum of investors that range from ESG funds to millennials in uranium and Dev provides compelling reasons why this interest will not only continue but grow. They discuss the Sprott Physical Uranium Trust, which invests and holds substantially all of its assets in uranium in the form of U308, and the impact on the uranium spot price.
