

The Technology Metals Show with Neo Lithium's Waldo Perez on the state of the lithium market

written by InvestorNews | November 5, 2020

Technology Metals Show hosts Jack Lifton and Peter Clausi interview Waldo Perez, President, CEO and Director of Neo Lithium Corp. (TSXV: NLC | OTCQX: NTTHF) on the state of the lithium market. "When it comes to lithium there are two places and two sources." Waldo started. "First is the Puna plateau which is Chile, Bolivia and Argentina for brine resources. 60% of the lithium of the planet is located in an area that covers this plateau." He continued, "The other source is a mineral called spodumene. This mineral is more common in the planet but the best spodumene is found in Australia."

In this interview, which may also be viewed on YouTube ([click here to subscribe to the InvestorIntel Channel](#)), Waldo went on to say that CATL – largest battery producer in the world, is a strategic investor in Neo Lithium. He explained that Neo Lithium's Tres Quebradas (3Q) Lithium Project was selected by CATL because it is the highest grade undeveloped project in the world and has low OPEX and CAPEX. The project has 50% IRR and payback of less than 2 years. To watch the full interview, [click here](#)

About Neo Lithium Corp.

Neo Lithium Corp. has quickly become a prominent new name in lithium brine exploration by virtue of its high quality 3Q Project and experienced team. Neo Lithium is rapidly advancing

its recently discovered 3Q Project – a unique high-grade lithium brine lake and salar complex in Latin America’s “Lithium Triangle”. The 3Q Project is located in the Catamarca Province, the largest lithium producing area in Argentina covering approximately 35,000 ha including a salar complex of approximately 16,000 ha.
