

Peter Clausi talks about CBLT receiving the option payment on its Chilton Cobalt property

written by InvestorNews | August 17, 2022

In this InvestorIntel interview with host Tracy Weslosky, [CBLT Inc.](#)'s (TSXV: CBLT) President, CEO and Director Peter Clausi talks about the recent news that it received the option payment from PowerStone Metals Corp. with respect to CBLT's 100% owned Chilton Cobalt property.

In the interview, which can also be viewed in full on the InvestorIntel YouTube channel ([click here to access InvestorChannel.com](#)), Peter tells Tracy that it shows "you can make as much money with the pen as you can with the drill bit in the mining world," and deals like this can produce "a great yield for shareholders." Peter also says in the interview that it is CBLT's intention, on the successful completion of the terms of the option agreement, which includes the listing of optionee PowerStone Metals Corp. on a recognized Canadian stock exchange, to declare a dividend to its shareholders of 750,000 Powerstone shares on a *pro rata* basis.

Peter also discusses the other properties in CBLT's portfolio, including Shatford Lake adjacent to the prolific lithium Tanco Mine, and Big Duck Lake in the Hemlo Gold Camp with numerous gold and base metal showings.

This interview, which was produced by InvestorIntel Corp., (IIC), does not contain, nor does it purport to contain, a summary of all the material information concerning the “Company” being interviewed. IIC offers no representations or warranties that any of the information contained in this interview is accurate or complete.

This presentation may contain “forward-looking statements” within the meaning of applicable Canadian securities legislation. Forward-looking statements are based on the opinions and assumptions of the management of the Company as of the date made. They are inherently susceptible to uncertainty and other factors that could cause actual events/results to differ materially from these forward-looking statements. Additional risks and uncertainties, including those that the Company does not know about now or that it currently deems immaterial, may also adversely affect the Company’s business or any investment therein.

Any projections given are principally intended for use as objectives and are not intended, and should not be taken, as assurances that the projected results will be obtained by the Company. The assumptions used may not prove to be accurate and a potential decline in the Company’s financial condition or results of operations may negatively impact the value of its securities. Prospective investors are urged to review the

Company's profile on [Sedar.com](https://www.sedar.com) and to carry out independent investigations in order to determine their interest in investing in the Company.

Digging deeper into Romios Gold

written by InvestorNews | August 17, 2022

Junior mining stocks that are “project generators” can be some pretty interesting companies to dig into. Often they are tough to evaluate because they have options on properties, or other entities have options or working owner interest in the project generator's prospects. Plus there can also be Net Smelter Royalties (NSR) and exploration spending commitments, etc. It can make for a lot of “what ifs” when trying to assess them. Sometimes that's where investors can find opportunity. If it's hard to evaluate, then there could be some hidden value lurking for someone willing to do their homework. Not to say that all companies that are hard to evaluate are hidden gems that we should all invest in, but the more you understand about any of your investments, the easier it is to make buy, sell and hold decisions.

But enough standing on my soap box preaching the virtues of due diligence in investing, let's dive into the fun stuff and look at a project generator with a whole lot of tentacles to assess.

[Romios Gold Resources Inc.](#) (TSXV: RG | OTCQB: RMI0F) is a Canadian mineral exploration company engaged in precious- and base-metal exploration, focused primarily on gold, copper and silver. It has a 100% interest in the [Lundmark-Akow Lake](#) Au-Cu property and 4 additional claim blocks in northwestern Ontario and extensive claim holdings covering several significant porphyry copper-gold prospects in the “[Golden Triangle](#)” of British Columbia. Additional interests include the Kinkaid Nevada claims covering numerous Au-Ag-Cu workings and two former producers: the [La Corne molybdenum mine](#) property (Quebec) and a former high-grade gold producer – the [Scossa mine](#) property in Nevada.

The Company has a history of staking or acquiring properties in the vicinity of existing mines or major development projects, owned or operated by major mining companies (e.g. Newmont, Teck). These properties are all located within world-class, stable mining districts in Canada and the USA. From there, Romios will either explore the property itself or enhance shareholder value by unlocking potential properties through joint ventures and/or strategic partnerships. Over and above the assets noted above, Romios retains an ongoing interest in several properties including a 20% carried interest in five of Honey Badger Silver’s claim blocks in the Thunder Bay silver district of northwestern Ontario; a 2% NSR on McEwen Mining’s Hislop gold property in Ontario; and a 2% NSR on Enduro Metals Corp. Newmont Lake Au-Cu-Ag property in BC. As well, there are all the shares of various counterparties they have accumulated along the way. At the end of March, 2022 Romios held 8.35 million shares of Enduro Metals Corp. (TSXV: ENDR), 150K shares of McEwen Mining Inc. (TSX: MUX | NYSE: MUX), 1.1 million shares of Honey Badger Silver Inc. (TSXV: TUF) and 165K shares of Sassy Resources Corp. (CSE: SASY).

You can begin to get a feel of how hard it might be to evaluate

Romios Gold but I'll try to sum it all up at the end of the article. In the meantime, the two focus points for current activity revolve around the [recently acquired](#) Kinkaid gold-silver-copper prospects in Mineral County, Nevada where the Company just announced [assays up to 17.9 g/t Au](#) from previously undocumented prospects on the property. Several poorly documented or unknown mineral showings were discovered by Romios during fieldwork in April, 2022 and sampling has returned encouraging gold results from all of them. Pending copper and silver assays could further increase the potential. Romios plans to undertake a program of detailed geological mapping and sampling across the Kinkaid property throughout the rest of 2022 with emphasis on the numerous mineralized showings. Diamond drilling of several showings is anticipated.

Last week Romios announced it had begun the [2022 exploration field program](#) on 3 of the Company's projects in the underexplored North Caribou Lake Greenstone Belt (NCLGB) in northwestern Ontario. This belt is home to Newmont's giant Musselwhite gold mine (> 7 million ounces Au in past production and reserves) but has seen relatively little exploration by other companies since the 1980s. At the North Caribou River claims the 2022 program will complete soil sampling and mapping in an effort to define the best targets for trenching and possibly drill testing. At Markop Lake the upcoming geological mapping and prospecting work will be the first concerted effort to explore this large area adjacent to Newmont's Musselwhite gold mine. At Arseno Lake a program of basic geological mapping, lithogeochemical sampling and soil sampling is planned to evaluate the potential of this area to determine if ground geophysics and/or drilling are warranted.

Source: Romios Gold Resources [June 20, 2022 Press Release](#)

So what is the value proposition for Romios Gold? Good question. The current market value of the various share positions that Romios holds in other companies is roughly C\$1.9 million making for total working capital of just under C\$3 million. The market cap at yesterday's close was C\$9.5 million implying the market is valuing all the remaining B.C., Ontario, Quebec and Nevada assets not currently under option to anyone at a mere C\$6.5 million. The Company has proven to be pretty good deal makers in the past, which poses the question of whether they can option or sell these assets to others at a price accretive to shareholders.

Darren Hazelwood, CEO, of Panther Metals PLC discusses the upside of his mineral exploration company

written by InvestorNews | August 17, 2022

In a recent InvestorIntel interview, Tracy Weslosky spoke with Darren Hazelwood, CEO of [Panther Metals PLC](#) (LSE: PALM) about [discovering](#) a VMS, Volcanic Massive Sulfide, mineral system at Panther's Obonga Project in Ontario and about how they are creating shareholder value in base, precious and energy metals through their extensive international network.

In this InvestorIntel interview, which may also be viewed on YouTube ([click here to subscribe to the InvestorIntel Channel](#)), Darren Hazelwood provided an update on [the listing](#) of Panther

Metals' Australian subsidiary on the ASX to drive forward its gold, nickel, and cobalt projects in Australia. Highlighting the upside potential of a mineral exploration company, Darren explained how Panther Metals is unlocking the potential of its prospects via targeted drilling led by a geological team with a proven track record in making discoveries.

To watch the full interview, [click here](#).

About Panther Metals PLC

Panther Metals PLC is an exploration company listed on the main market of the London Stock Exchange. Panther is focused on the discovery of commercially viable mineral deposits. The Company's operational focus is on established mining jurisdictions with the capacity for project scalability. Drill targets are assessed rapidly utilizing a combination of advanced technologies and extensive geological data to decipher potential commercial viability and act accordingly. Panther's current geological portfolio comprises of three highly prospective properties in Ontario, Canada while the developing investment wing focuses on the targeting of nickel and gold in Australia.

Leocor Gold, looking for

precious metals in the right places

written by InvestorNews | August 17, 2022

The Canadian province of Newfoundland and Labrador offers one of the most extensive mining histories in Canada, with small-scale mining dating back to the 1770's, which expanded into a major industry by the 1860's. The province offers world class geology, significant infrastructure and exceptional access to a skilled workforce. Lately, the province has become a hotspot for mineral exploration companies and investors looking for gold exposure. Granted it probably isn't going to become the kind of gold rush an NFL team will be named after but it has propelled at least one junior start up that IPO'd in August, 2020 from a \$25 million market cap to \$1.4 billion in a little over a year. That's the kind of gold rush I can get excited about.

As you would expect when an area play gains traction there are a myriad of companies, big and small, who start appearing on the radar. Today we are going to look at one of the smaller market cap companies but one with a huge land position. [Leocor Gold Inc.](#) (CSE: LECR | OTCQB: LECRF) is involved in the acquisition and exploration of precious metal projects, with a current focus in Atlantic Canada. Leocor, through outright ownership and earn-in agreements, currently controls several gold-copper projects in prime exploration ground located within the prolific Baie Verte Mining District. Leocor's Baie Verte portfolio includes the Dorset, Dorset Extension, Copper Creek and Five Mile Brook projects, creating a contiguous nearly 2,000 hectare exploration corridor. The Company also controls the 6,847 hectare grassroots Startrek project near Gander, as well as three district scale land packages in North Central Newfoundland, known as Robert's Arm, Hodge's Hill, and Leamington, (collectively "Western

Exploits”) representing over 144,000 hectares (1,440 square kilometers) of prospective exploration.

Source: Leocor Gold [Corporate Presentation](#)

I’ve got to admit that between [Leocor’s website](#), [corporate presentation](#) and quarterly MD&A there is an awful lot of information about each of the properties so if you really want to do a deep dive into what each of the assets are all about I encourage you to go have a look for yourself. In the meantime, I will try and provide a brief description to whet your appetite.

The [Baie Verte property](#) contains multiple gold occurrences and mineralized zones surrounded by active mine operations. The Dorset Project is the Company’s flagship exploration target with abundant historical data and two significantly mineralized quartz veins with extensive surface showings. The Main Zone includes three historic occurrences, with up to 409 g/t gold in grab samples, with channel sampling results of 177 g/t Au over 0.35m, 22 g/t Au over 1.5m, 17.2 g/t Au over 1.5m, and 14.7 g/t Au over 1.5m. Historic drilling includes 9.5 g/t Au over 1.3m. Historic select sampling at the Braz Zone returned values of 314 g/t Au, 40 g/t Au, 31.4 g/t Au, 21.2 g/t Au, 19.2 g/t Au, and 14.8 g/t Au. Historic channel sampling across the vein, returned 9.5 g/t Au over 0.4m; 5.7 g/t Au over 0.5m and 1.2 g/t Au over 0.65m.

The [Startrek project](#) is in the Gander district and has nothing to do with Captain Kirk’s recent trip to space. However, it does have the distinction of hosting rocks similar to those underlying New Found Gold Corp.’s Queensway Gold Project located approximately 25 km to the west. The property contains three areas of interest, the Western, Central and Eastern Zones. More than 50 gold occurrences have been discovered on the property

through previous trenching and grab samples. The Central Zone has seen trenching by Rubicon Minerals, which focused on gold showings in epithermal veining, and which produced highly anomalous values of gold, arsenic and antimony, and sampling by White Metal which produced grab samples up to 40 g/t Au.

The [Western Exploits district](#) is the largest property held by Leocor and was introduced to the company by the prolifically successful prospector Shawn Ryan who now acts as a technical advisor to the Company. The Company plans on investing approximately \$2,347,000 on drill target generation between now and the end of 2022. This includes the recently announced [phase one exploration at its district scale Hodge's Hill gold project](#).

Newfoundland and Labrador has some great geology for lots of different commodities that the world values. If you recall, Robert Friedland's Diamond Fields was looking for kimberlite and ended up finding a world class nickel-cobalt-copper mine at Voisey's Bay. That's why I really like how much property Leocor has staked. You just never know if there is perhaps another valuable asset lurking in the areas you are prospecting. In the meantime, gold is the name of the game and with \$10.5 million in cash at the end of July, Leocor is well financed to hunt for the main prize.
