

# Vance White on finding the next Kidd Creek

Vance White, President, CEO and Director of Noble Mineral Exploration Inc. (TSXV: NOB) ("Noble") in an interview with InvestorIntel Senior Editor, Jeff Wareham discuss Project 81, a VMS/gold project immediately adjacent to the historic Kidd Creek mine. Project 81 has a 70,000 hectares block of mineral rights that are underexplored, with only some exploration completed by Canico and McIntyre Porcupine Mines in the 60's and early 70's. Noble has partnered with ORIX Geoscience Inc. to explore the property using map surveying technology, such as Heliborne EM/MAG survey and Gravity Gradiometer survey. Using this technology, Vance anticipates Noble will discover a similar signature to the next Kidd Creek mine. Vance then goes on to explain how Noble's joint venture projects will benefit shareholders.

**Jeff Wareham:** There has been a lot of news from your company recently...what should investors be focused on?

**Vance White:** What we are doing and what we put together is an opportunity to follow up on an exploration program that would be looking for the next Kidd Creek Mine. Kidd Creek Mine came into production in the mid-sixties, was discovered in the early sixties, has produced something on the order of about 150 million tons of ore, has employed something on the order of about 20,000 persons over the course of its 50-year history.

**Jeff Wareham:** You have just been out in the market financing. Investors are probably paying attention to the stock. What sort of news flow should investors be watching for over the next few months...to access the complete interview, [click here](#)
