Pancon CEO on the gold and nickel advantages in proven mining districts

written by InvestorNews | July 24, 2019

We are well-positioned in all six of our projects, both in South Carolina and in Ontario. We are in proven mining districts, near and surrounding former or producing gold mines. We also focus on relationships and competence and capacity. We have world-class geologists and we work hard on engaging with all of our stakeholders and shareholders on a regular basis." States Layton Croft, President, CEO and Director of Pancontinental Resources Corporation (TSXV: PUC), in an interview with InvestorIntel's Tracy Weslosky.

Layton continued by providing an update on Pancon's exploration program at St. Laurent Project. He said that it is a very exciting, more than early-stage nickel-cobalt- copper-gold-platinum-palladium project that has known mineralization in disseminated sulphide, relatively close to surface. Layton also said that Pancon's focus on battery metals include nickel, copper, and cobalt. The company is focussed on exploring for primary nickel deposits. Some of the electric vehicle manufacturers are looking to reduce the amount of cobalt or enhance their technology and are increasing their nickel content. So a nickel focussed battery metal strategy is the right one.
