

Claudia Tornquist on the global copper supply shortage and why Kodiak Copper is aiming for a bigger drill program in 2022

written by InvestorNews | February 18, 2022

In a recent InvestorIntel interview, Chris Thompson spoke with Claudia Tornquist, President, CEO, and Director of [Kodiak Copper Corp.](#) (TSXV: KDK | OTCQB: KDKCF) about the global copper supply shortage and about identifying new high-priority drill targets near high-grade Gate Zone copper-gold deposit on Kodiak's MPD porphyry project in British Columbia.

In this InvestorIntel interview, which may also be viewed on YouTube ([click here to subscribe to the InvestorIntel Channel](#)), Claudia Tornquist said that the results of ground geophysical and soil geochemical surveys from the MPD project highlight the potential to further extend the mineralization at Gate Zone substantially. With NYSE listed Teck Resources Limited as its largest shareholder, Claudia went on to say that Kodiak Copper aims for a bigger drill program this year and to take the model that brought success at Gate Zone and replicate that on other high priority drill targets.

About Kodiak Copper Corp.

Kodiak is focused on its 100% owned copper porphyry projects in Canada and the USA. The Company's most advanced asset is the MPD

copper-gold porphyry project in the prolific Quesnel Trough in south-central British Columbia, Canada, where the Company made a discovery of high-grade mineralization within a wide mineralized envelope in 2020. Kodiak also holds the Mohave copper-molybdenum-silver porphyry project in Arizona, USA, near the world-class Bagdad mine. Kodiak's porphyry projects have both been historically drilled and present known mineral discoveries with the potential to hold large-scale deposits.

Kodiak's founder and Chairman is Chris Taylor who is well-known for his gold discovery success with Great Bear Resources. Kodiak is also part of Discovery Group led by John Robins, one of the most successful mining entrepreneurs in Canada.

Romios Gold with huge potential exploration upside trades on a tiny market cap of C\$10M

written by InvestorNews | February 18, 2022

[Romios Gold Resources Inc.](https://www.sedar.com) (TSXV: RG | OTCQB: RMI0F) (Romios) is a junior precious and base metals explorer with a lot going on, all in North America. Romios' properties are prospective for gold, silver, copper, cobalt, and molybdenum. Romios' Golden Triangle properties have gold-copper porphyry style

mineralization and are located in a region known for some spectacular successes.

The [Golden Triangle region](#) is known for having some very large discoveries and mines such as the Galore Creek Project (M&I resource of 9.3 million ounces of gold, 150 million ounces of silver and 5.1 million tonnes of copper), Eskay Creek-Au-Ag deposit, Brucejack Au mine ([produces 311,000 Oz Au pa](#), acquired recently by Newcrest buying Pretivm for [\\$3.5 billion](#)) and the Red Chris Cu-Au mine.

So yes, the Golden Triangle is a BIG deal location for gold explorers.

Canada's Golden Triangle is famous for large gold discoveries and mines – Galore Creek, Eskay Creek, Brucejack and Red Chris

Source: [Romios Gold Resources website](#)

Romios' properties by location include:

- **Golden Triangle (British Colombia, Canada)** (flagship region with [79,789 ha](#)) – Trek, JW, Newmont Lake (under option to Enduro Metals Corp.), Royce/Porc.
- **Ontario (Canada)** – Lundmark-Akow Lake, Timmins Hislop Gold Project.
- **Quebec (Canada)** – La Corne Molybdenum Project.
- **Nevada (USA)** – Scossa Gold Project.

Romios' Golden Triangle potential

Some exciting news [announced](#) by Romios back on November 22, 2021, which it would seem the market has not fully digested. The news concerned the Trek South Property and [stated](#):

“Romios outlines a new >1 km wide porphyry-style Cu-Au-Ag system on its Trek South Property in the Golden Triangle, B.C. The program has partially delineated a **>1 km wide zone of porphyry-style alteration and veinlet-hosted Copper-Gold-Silver** (Cu-Au-Ag) mineralization. As a result, Trek South is now a high priority target for geophysical surveys and diamond drilling in 2022 along with the Company’s previously identified Trek North copper-gold porphyry zone which returned impressive drill intercepts including **131 m grading 0.6% Cu, 0.39 g/t Au and 8.5 g/t Ag** in past campaigns ([See Press Release – October 22, 2008](#)).....The Trek South target is 3 km SSW of Trek North and may lie along the same structural corridor as reflected by the nearby Trek Fault and a series of intervening Cu-Au-Ag prospects (See Map 1).”

The above news means the Trek Property (Trek North & Trek South) is shaping up to be a potential game-changer for Romios if they can prove up a significant size copper-gold-silver resource.

Romios Gold Resources’ properties in Canada’s Golden Triangle (shown in red) including Trek North and Trek South, JW, Newmont Lake (optioned to Enduro)

Source: [Romios Gold Resources website](#)

Romios acquires silver-copper prospects in Nevada

In other recent news, Romios [announced](#) that it “has acquired 109 claims over numerous historic gold-silver-copper prospects in the Kinkaid area of Mineral County, Nevada.”

Closing remarks

Romios has recently successfully [raised capital](#) (and [received 4 million shares of Enduro Metals](#) pursuant to Newmont Lake Option

Agreement) to further their exploration efforts, especially in the prolific region of Canada's Golden Triangle. In 2022, Romios plans to do geophysics and [further drilling](#) at Trek North and Trek South.

For investors looking at a gold junior with huge potential exploration upside then don't go past Romios Gold Resources. It trades on a tiny market cap of [~C\\$10 million](#) and is exploring in a proven billion dollar region with several exciting 100% owned properties as well as the optioned out property at Newmont Lake. I have not even had time to discuss their exciting Ontario projects including at the well known Timmins region.

Investors will need plenty of patience and expect some stock dilution along the way, as finding significant gold is not easy.

One of the most exciting junior gold companies out there. Let's see if they hit it big in 2022.

Disclosure: The author intends to go long Romios Gold Resources Inc. (TSXV: RG) in the next 24 hours.

Chris Thompson with Stephen Burega on the quality of assets in the Romios Gold portfolio

written by InvestorNews | February 18, 2022

In a recent InvestorIntel interview, Chris Thompson spoke with

Stephen Burega, President of [Romios Gold Resources Inc.](#) (TSXV: RG | OTCQB: RMIOF) about identifying two [new banded iron formations](#) on Romios' Lundmark-Akow Lake Project, which are similar in nature to Newmont's giant Musselwhite gold mine.

In this InvestorIntel interview, which may also be viewed on YouTube ([click here to subscribe to the InvestorIntel Channel](#)), Stephen Burega provided an update on Romios' properties in the Golden Triangle where they have already identified two copper-gold porphyry targets, and are on the way to identifying a third one. He also provided an update on other properties in Romios' portfolio, which are in the vicinity of existing mines and deposits, owned or operated by major mining companies.

To watch the full interview, [click here](#)

About Romios Gold Resources Inc.

Romios Gold Resources Inc. is a progressive, mineral exploration, Canadian company engaged in precious- and base-metal exploration. It is focused primarily on gold, copper and silver. It has a 100% interest in the Lundmark-Akow Lake gold-copper property in northwestern Ontario and it has extensive claim holdings covering several significant porphyry copper-gold prospects in the "Golden Triangle" of British Columbia. Additionally, the company has interests including two former producers, the La Corne molybdenum mine property (Quebec) and a former high-grade gold producer, the Scossa mine property (Nevada). The Company also retains an ongoing interest in several properties including a 20% carried interest in five claim blocks in the Thunder Bay silver district of northwestern Ontario; and a 2% NSR on the Hislop gold property in Ontario.

Signature's Lingman Lake Gold Mine Update as Project moves towards a NI 43-101 Technical Report in 2022

written by InvestorNews | February 18, 2022

[Signature Resources Ltd.](#) (TSXV: SGU | OTCQB: SGGTF | FSE 3S3) ("Signature") continues to grow and explore its 100% owned, 27,113 hectare, property containing the Lingman Lake Gold Mine & Project, in Ontario, Canada. Recent [magnetometer survey results](#) look positive and have identified six new target areas ranging in interpreted strike lengths from 200 metres to more than 950 metres. Signature plans to drill test the high priority target areas after completing modeling in the fall of 2021. Furthermore, Signature has identified the potential for a porphyry system at the north-western portion of their property.

Drilling continues at Lingman Lake East-side as does property wide exploration for future drilling

A current [fully funded 10,000 metre drilling program](#) is underway targeting expansion on the depth and strike length of the east-side of the mineralized zones surrounding the historical Lingman Lake Gold Mine underground workings.

Concurrently, Signature is running an expanded regional exploration program. This includes data compilation and a new property wide summer airborne geophysical and LIDAR surveys for the purpose of the identification and ranking of highly

prospective regional targets to then be followed up,

Signature President, CEO and Director, Robert Vallis, [stated](#):

“Signature is now advancing diligently on two main fronts with the Lingman Lake gold mineralization expansion drilling and the regional high-potential target identification, ranking, and focused exploration. We look forward to many new and exciting advancements on these fronts throughout the remainder of this year.”

A potential porphyry structure at the Lingman Lake Property

On September 7, 2021, Signature announced some exciting news [stating](#): “Regional work shows signs of a potential porphyry system.....Gold, silver (precious metals); copper, lead, zinc, and molybdenum (base metals) associated with localized magnetic highs within the larger magnetic low. Base metal assemblage more indicative of an intrusive (porphyry) system with a precious metal component.”

Signature Resources has discovered signs of a potential porphyry system (precious and base metals associated with localized magnetic highs within the larger magnetic low)

Source: [Signature Resources news September 7, 2021](#)

Signature Resources Head Geologist, Walter Hanych, [stated](#):

“This is an exciting development in the regional potential of the Lingman Lake Greenstone Belt, as we may be looking at a potential porphyry system in the north-western portion of the property.”

More about Signature Resources

Signature's property has now grown to 27,113 hectares across the Lingman Lake Greenstone Belt. There is also nearby expansion potential at Lingside West and Lingside East, deposits that are thought to be extensions of the Lingman Lake Gold Mine deposit. The Property has a historical mine (Lingman Lake Gold Mine) with a mine shaft and 3 levels along with a 250 tpd mill built in the 1940's.

The Lingman Lake Gold Mine has a historical resource (not yet NI 43-101 compliant, so not to be relied upon) of over [234,684 oz of contained gold averaging 6.86 g/t Au](#). It should be noted that Lingman Lake's historic resource was drilled with <700 m strike length and the deposit remains open laterally and to depth.

Signature Resources' historical resource model (red and green shaded area at top) and 2021 drill and exploration locations

Source: [Signature Resources company presentation](#)

Next steps

As highlighted in the [September 20, 2021 press release](#), the Company's ongoing, fully-funded Fall 2021 diamond drill campaign continues at the mine site and is currently testing inter-level continuity and grade extensions with first assay results pending.

Regional exploration efforts continue, and winter ground-based surveys will be followed by target drill testing in H1 2022.

Closing remarks

Signature Resources has a well regarded and highly experienced management team. Exploration work at their 100% owned Lingman Lake Property is in full swing with a goal to publish a maiden

NI 43-101 resource in 2022. In addition to the resource estimate, there is potential for the discovery of a porphyry system at the north-western portion of the property.

Signature Resources trades on a market cap of just C\$16.6 million, which certainly leaves plenty of upside potential should a good maiden resource or a potential porphyry discovery be announced in the next 6-12 months. Stay tuned.
