Vance White on the next boom in the commodity cycle

written by InvestorNews | July 25, 2019

“I would put that the cannabis and perhaps cryptocurrency markets are going to roll over into the next boom in the commodity cycle. It does not matter whether you are talking about gold, silver, copper, lead, zinc. With the evolution of the electric vehicles and demand for battery-grade nickel and cobalt components that comprise those batteries, you will see an evolution with regards to demand for those specific minerals in general. We feel very hopeful that down the road the prices for those minerals and gold will be significantly higher than what they are right now.” States Vance White, President, CEO and Director of Noble Mineral Exploration Inc. (TSXV: NOB), in an interview with InvestorIntel’s Tracy Weslosky.

Vance went on to discuss Noble’s 2018 drill program on the Lucas Gold Project. He said that the company has identified a 1,700 meter gold mineralized trend that has the potential to host economic gold grades. Vance also provided an update on the preliminary results from mineralogical studies at Crawford Nickel-Cobalt project near Timmins. He said that the results were very encouraging from the project which is close to existing infrastructure including the Kidd Creek milling complex.

Vance White on Noble Mineral's 'mega deposit potential' of gold, nickel – and cobalt.

written by InvestorNews | July 25, 2019

Recently during PDAC 2019, Vance White, President, CEO and Director of Noble Mineral Exploration Inc. (TSXV: NOB), shared with InvestorIntel's Tracy Weslosky, why Noble Mineral shares were up +52% in the month of February. Vance started "We are not just into gold exploration we are into nickel, cobalt exploration as well which are tremendously important for the expansion of the electric vehicle market. On top of that the property sits immediately north of the Kidd Creek Mine which has produced about 160 million tons over the course of last 50 years of production. That type of mega deposit normally hosts other satellite deposits that could be in the order of 30-50 million tons. That being the case we could be looking at significant repricing of the shares in the market place."

Noble Mineral Exploration Inc. is a Canadian-based junior exploration company which, in addition to its shareholdings in in Spruce Ridge Resources Ltd., and MacDonald Mines Exploration Ltd., and its interest in the Holdsworth gold exploration property in the area of Wawa, Ontario, holds in excess of 79,000 hectares of mineral rights in the Timmins – Cochrane areas of Northern Ontario known as Project 81. Project 81 hosts diversified drill-ready gold, nickel-cobalt and base metal exploration targets at various stages of exploration.
