

InvestorIntel's Peter Clausi interviews Chris Thompson on the eResearch Initiation Equity Research Report on Renforth Resources

In a recent InvestorIntel interview, Peter Clausi spoke with Chris Thompson, President of eResearch Corp. about his 29-Page Initiation Equity Research Report on Renforth Resources Inc. (CSE: RFR | OTCQB: RFHRF | FSE: 9RR).

In this InvestorIntel interview, which may also be viewed on YouTube (click here to subscribe to the InvestorIntel Channel), Chris went on to say that Renforth has four gold and battery metal projects within the Abitibi Greenstone Belt with its main project, the Parbec Gold Project, adjacent to the Canadian Malartic mine, Canada's largest operating open-pit gold mine, and a potential buyer. Renforth recently completed a Winter drill program at Parbec to build ounces and bring historical drill results into the resource calculations. With a history of building resources and selling projects, Chris said Renforth has a NI 43-101 near-surface resource of 282,800 gold ounces at the Parbec project which he expects to double in size with the updated resource, expected this quarter.

About eResearch Corporation

eResearch Corporation is a respected source for institutional-quality, equity research focused primarily on small- and mid-cap companies. The focus is on identifying companies that have interesting prospects, sound management, and significant potential for share price appreciation. The company

complements its corporate research coverage with a diversified selection of informative, insightful, and thought-provoking research publications from a wide variety of investment professionals. The professional investment research and analysis is provided directly to the subscriber network of discerning investors, and electronically through its website, www.eresearch.com

About Renforth Resources Inc.

Renforth holds the Parbec open pit constrained gold deposit in Malartic Quebec, contiguous to the Canadian Malartic mine, with a 2020 resource estimate of 104,000 indicated ounces of gold at a grade of 1.78 g/t Au and 177,000 inferred ounces of gold at a grade of 1.78 g/t Au. This resource estimate is now considered by Renforth to be out of date due to the results received in a 15,569m drill program which has been recently completed. This program was planned to twin, infill and undercut existing drill holes at Parbec, to support a rebuild of the geological model and a resource estimate restatement. In addition to this Renforth has discovered a nickel bearing ultramafic, coincident with a copper/zinc VMS, over ~5km of strike in the western end of the 20km central anomaly at Renforth's wholly owned 215 km² Surimeau property. This prospect was discovered on surface and the subject of a very short, shallow drill program, a more robust drill program is planned for Spring 2021. Renforth also holds the Malartic West property, the site of a copper/silver discovery, and Nixon-Bartleman, west of Timmins Ontario, with gold present on surface over a strike length of ~500m. Renforth is well funded, with ~\$6 million in cash and securities on hand (*as at 03/15/21), in addition to the gold contained in our gold deposit.
