

# **With lithium demand skyrocketing here are 5 early-stage lithium junior miners to watch**

With lithium demand projected to increase 10-11 fold this decade, there is a huge opportunity for successful lithium junior miners to prosper. Last year Rio Tinto was quoted as saying that “filling the supply gap will require over 60 Jadar projects”.

Then just last month Tesla CEO Elon Musk said (Tesla Q1 2022 earnings call transcript): “...can more people please get into the lithium business? Do you like minting money? Well, the lithium business is for you...” Musk also said on Twitter: “Price of lithium has gone to insane levels! Tesla might actually have to get into the mining & refining directly at scale unless costs improve.”

Of course, industry experts have been warning of EV metals supply deficits for some years, but it appears these warnings mostly fell on deaf ears. With this background in mind, today we take a look at some early-stage lithium junior companies with the potential to help fill the lithium supply gap in the second half of this decade.

**China lithium carbonate spot prices – up about 6x over the past year due to lithium shortages**

Source: Trading Economics

## 5 early-stage lithium junior miners to watch out for in 2022 (in no particular order)

1. Essential Metals Limited (ASX: ESS)
2. Green Technology Metals Limited (ASX: GT1)
3. Metals Australia Ltd. (ASX: MLS)
4. Lithium South Development Corporation (TSXV: LIS | OTCQB: LISMF)
5. Winsome Resources Limited (ASX: WR1)

### Essential Metals Limited (ASX: ESS)

Essential Metals is an Australian exploration company with 9 projects (lithium, gold, gold JV, and nickel JV) all in Western Australia (WA). Three of the projects are 100% owned and 6 are JV's with other companies, with ESS retaining a 20-30% interest (see below).

Essential Metal's flagship project is their 100% owned Pioneer

Dome Lithium Project in WA. The Project is located in a known lithium corridor and the gold-rich Eastern Goldfields region of WA, which contains the Mt Marion, Bald Hill and Buldania lithium mines/projects. The Project has a reasonable sized JORC compliant **Total Resource of 11.2Mt at 1.21% Li<sub>2</sub>O**, still with exploration upside. The Resource starts from or near surface. Drill assay results from the recent campaign are due out by the end of May 2022.

Essential Metals also has two other 100% owned gold projects in WA, namely the Golden Ridge Project (100% owned), 20kms from the Kalgoorlie super pit and the Juglah Dome Project, 60km east-southeast of Kalgoorlie. In addition, the Company has numerous JV projects including Acra Gold Project JV (25% interest), Kangan Gold Project JV (30%), Balagundi Gold Project Farmin/JV (25%), Larkinville Gold Project Farmin/JV (25% gold interest) (hosts a JORC Resource of 19,700 t @ 3.02 g/t for 11,600 oz. Au), Blair-Golden Ridge Nickel Farmin/JV (25% nickel interest) and Wattle Dam Nickel Joint Venture (20% nickel interest).

Essential Metals trades on a market cap of A\$162 million.

**Essential Metals summary showing the Pioneer Dome Lithium Project location near other successful lithium mines and projects in WA**

- A well-funded and active ASX-listed explorer
- Focused on finding and producing essential metals for a sustainable, low-carbon future
- Three highly prospective, 100%-owned projects in easy-to-explore, low-cost locations near Kalgoorlie – a Tier-1 mining jurisdiction
- Exceptional pipeline of resource growth opportunities and exploration targets in the core of WA's "lithium corridor"
- **High quality lithium Resource: 11.2Mt at 1.21% Li<sub>2</sub>O at Pioneer Dome**
- Exciting gold potential at Golden Ridge and Juglah Dome Projects near Kalgoorlie
- Free-carried exposure to a significant portfolio of nickel and gold exploration projects

## Green Technology Metals Limited (ASX: GT1)

Green Technology Metals (GT1) has multiple lithium projects (options to acquire, some at 80% interest others at 100% interest) spread over 39,982 hectares in Ontario, Canada. GT1's most advanced project is the Seymour Lithium Project with a JORC Total Mineral Resource of 4.8Mt @ 1.25%. Within the Seymour Project, drill results include an impressive 40m @ 1.54% Li<sub>2</sub>O. When combining all GT1's Ontario Lithium Projects the target resource is 50-60 MT @ 0.8-1.5% Li<sub>2</sub>O.

An updated resource estimate is targeted for Q2, 2022. Management is top tier and highly experienced.

Green Technology Metals trades on a market cap of A\$212 million.

**GT1's portfolio of multiple lithium projects in Ontario Canada**

Source: GT1 website

## Metals Australia Ltd. (ASX: MLS)

Metals Australia is an Australian junior miner with several projects. Their most advanced project is the Lac Rainy Nord Graphite Project in Quebec, Canada with an Indicated and Inferred Resource of 13.3Mt at 11.5% TGC for 1.529M tonnes of contained graphite.

With regards to lithium, Metals Australia 100% owns the promising Manindi Lithium and Zinc Project in WA. The Project has several lithium-cesium-tantalum (LCT) pegmatites spread over a total 3km strike length. Individual pegmatites have strike lengths of over 300m and widths of up to 25-30m. Past drilling includes intersections of **15m @ 1.2% Li<sub>2</sub>O, 117 Ta<sub>2</sub>O<sub>5</sub> from 34m**. Drilling is ongoing notably at the Foundation pegmatite where consistently high grade lithium grab samples (1% Li<sub>2</sub>O and >0.4% Rb) have been detected over the entire 500m

strike length. Assay results are expected shortly. Manindi also has an existing JORC 2012 Resource estimate of **1.08Mt at 6.52% Zn, 0.26% Cu and 3.19g/t Ag.**

Metals Australia trades on a market cap of A\$54 million.

### **Lithium South Development Corporation (TSXV: LIS | OTCQB: LISMF)**

Lithium South Development Corporation (Lithium South) is already quite advanced at their 100% owned Hombre Muerto North Lithium Brine Project in Argentina. The Project lies near several billion-dollar projects such as Livent's lithium mine, Allkem's Sal de Vida project, and POSCO's quite new project purchased for US\$280 million. Hombre Muerto is the premiere salar in Argentina, known for very high grade lithium and very low impurities.

The Hombre Muerto North Project has an M&I Resource of 571,000t contained LCE, with an excellent grade of 756mg/L, and a very low Mg/Li ratio of 2.6:1. Drilling is about to begin at their Alba Sabrina claim with results to follow most likely later in Q2, 2022. The Resource has potential to grow significantly from here.

Lithium South trades on a market cap of only C\$68 million.

### **Winsome Resources Limited (ASX: WR1)**

Winsome Resources is a lithium explorer focused on their 4, 100% owned, projects spread over 50,000 Ha in Quebec, Canada. The Projects are Cancet, Adina, Sirmac-Clappier, and Decelles (option to acquire 100%).

The flagship Cancet Lithium Project has had outstanding previous drilling success and boasts a JORC Exploration Target of 15-25Mt @ 1-2% Li<sub>2</sub>O + 100-250ppm Ta<sub>2</sub>O<sub>5</sub>. The past drilling includes 59 holes for 5,216m averaging ~70m drill depth defining a shallow high-grade lithium deposit. Drilling will

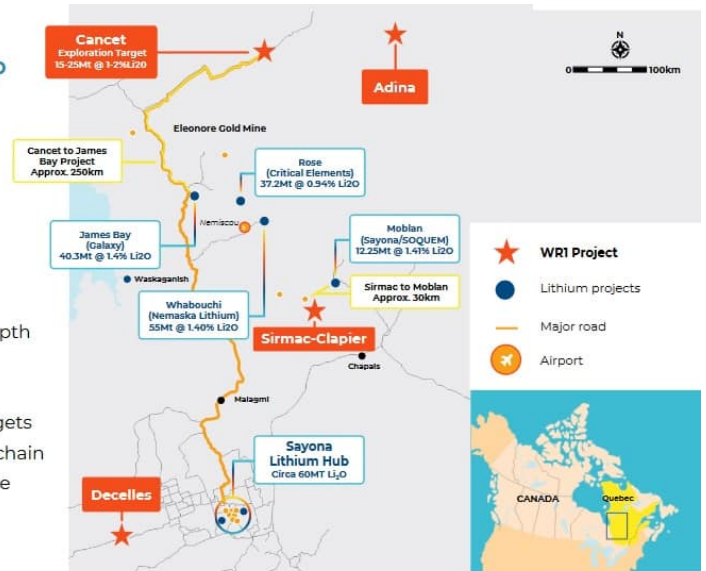

continue in 2022 with a substantial maiden Resource estimated expected later this year.

Winsome Resources trades on a market cap of A\$66 million.

## Summary of Winsome Resources 4 lithium projects in Quebec, Canada

In excess of 50,000 Ha of 100% owned exploration tenements comprising of 4 project areas and a portfolio of advanced exploration stage Lithium assets in the emerging lithium province of Quebec, Canada

- Current portfolio comprises permits for:
  - **Cancel**
  - **Sirmac-Clapier**
  - **Adina**
  - **Decelles**
- 59 holes for 5,216m of diamond core drilling averaging ~70m drill depth
- Shallow high grade lithium deposit
- Further exploration will target identification of additional tonnage through down dip and along strike extension as well as satellite targets
- Strategically located close to established infrastructure and supply chain
- Excellent metallurgy for simple low cost and low impact concentrate production

## Closing remarks

Investing in early-stage lithium juniors carries higher risk and reward.

Of the 5 companies discussed in this article three (Essential Metals, Green Technology Metals, Lithium South Development Corp.) already have a lithium resource, one (Winsome Resources) has defined a lithium deposit with a resource estimate due later in 2022, and the other (Metals Australia) has a graphite and a zinc-copper-silver resource with an exciting lithium project with drill results out soon.

I could also include Avalon Advanced Materials Inc. (TSX: AVL | OTCQB: AVLNF) in this group, but I already wrote on them recently here, discussing their lithium projects, lithium resource, and plans for a JV lithium refinery in Thunder Bay

which were given a huge boost recently as you can read here.

Finally to answer Elon's question: "Can more people please get into the lithium business?" The problem is it takes at least 5-10 years to build a lithium mine from scratch. I will finish with two key quotes last month from lithium market experts:

- Benchmark Mineral Intelligence was quoted stating: *"Battery capacity is currently growing at twice the speed of lithium raw material supply."*
- Mr. Lithium, Joe Lowry was quoted stating: *"I believe there will be a day in the future when lithium is in oversupply, but it won't be in this decade....You can build a battery factory in two years, but it takes up to a decade to bring on a lithium project."*

*Disclosure: The author is long ALL the lithium companies mentioned in this article and intends to hold long term.*

## **Kodiak Copper proves that what shareholders want is leadership, copper – and gold**

On September 14 it was announced that Teck Resources has agreed to make a strategic investment of a 9.9% interest in Kodiak Copper (TSXV: KDK) ('Kodiak'), at C\$1.95 per share raising C\$10.5m.

Add in drill results on September 3rd that included **282 m of 0.70% copper and 0.49 g/t gold (1.16% CuEq)** at Kodiak's advanced MPD copper-gold porphyry project in British Columbia, shareholders have responded positively. In fact, **Kodiak**

Copper's stock price has risen from C\$0.50 on August 24th to C\$2.80 as of September 28th for a 460% increase in the last month.

Source

Today I take a deeper look at Kodiak's MPD porphyry project. As most resource investors know copper porphyry projects can be enormous in size and contain valuable by-products (gold, silver, molybdenum) which can make them economical even at lower grades than other projects.

### **MPD Copper-Gold Porphyry Project**

The MPD Project is located in the prolific Quesnel Trough in southern British Columbia, Canada. Kodiak amalgamated 3 projects into one – Man, Prime, Dillard – hence the name MPD. The region is mining friendly with good access to infrastructure.

**The MPD Project has road access and is close to infrastructure**

# MPD – Road Access and Close to Infrastructure

- ◆ Property adjacent to highways and with excellent road and trail access
- ◆ Close to nearby mines, transmission corridor and towns of Merritt, Princeton and Kelowna

## Source

Previous drilling by Newmont Corporation and Rio Tinto was focused on depths up to 200 meters below the surface. Kodiak's strategy is to use modern mining methods and to drill deeper. So far it is paying off. In November 2019, Kodiak (then known as Dunnedin Ventures) started its first drill campaign at MPD and discovered the Gate Zone, including several promising drill results that followed. The key was they were drilling deeper than before. The January 2020 announcement included the following:

- "The new discovery underlies a **large copper-in-soil anomaly with over one kilometre of strike** at the 'Prime' area of the project. Over 100 historical drill holes containing copper and gold mineralization define a **large, likely multi-centre porphyry system across 10**

**square kilometres of the MPD project.**

- The Gate Zone includes intervals of higher grade copper-gold within a broad lower grade interval, with mineralization present from **near surface to a vertical depth of 800 metres**, and remains open at depth.
- Higher grade intervals include: 74.9 metres of 0.54% CuEq (0.43% copper and 0.11 g/t gold) from 297.0 metres to 371.9 metres. 102.0 metres of 0.68% CuEq (0.53% copper and 0.16 g/t gold) from 404.9 metres to 507.0 metres.
- Broad moderate grade intervals include: 763.6 metres of 0.28% CuEq (0.21% copper and 0.07 g/t gold) from 52.3 metres to 816.0 metres (entire bedrock drill hole length). 340.7 metres of 0.42% CuEq (0.33% copper and 0.09 g/t gold) from 219.0 metres to 559.7 metres.”

Combining this with the September 2020 result of 282 m of 0.70% copper and 0.49 g/t gold (1.16% CuEq), with further assays results pending, and further drilling in 2020; you can start to see why investors (including mining giant Teck Resources) are getting excited.

**Kodiak Copper's MPD project historic drill results, strong discovery potential at depths below 200m**

# MPD – Good Historic Drill Results, Most Drilling Very Shallow

- ◆ 129 drill holes (25,780 m) completed from 1966 to 2014. Previous operators include Rio Tinto PLC (LSE:RIO) and Newmont Mining Corp (NYSE: NEM)
- ◆ Numerous showings; copper and gold confirmed across a large, 10km<sup>2</sup> area
- ◆ Mineralization from surface, historic drill holes rarely tested below 200m vertical depth
- ◆ Discovery potential with deeper drilling

Source

## Closing remarks

Kodiak Copper was founded by Chris Taylor who is well-known for his gold discovery success with Great Bear Resources, Kodiak is lead by President, CEO and Director Claudia Tornquist, the former General Manager at Rio Tinto. Kodiak is also part of the Discovery Group led by one of the most successful mining entrepreneurs in Canada John Robins and added to this, we now have Teck Resources (market cap US\$7.4b) taking a 9.9% interest.

More assay results (drill hole MPD-20-005) are due out soon and then there will be further drill results in Q4, 2020. With a current market cap of C\$102m means, Kodiak now has plenty of cash and plans to drill their US located Mohave porphyry project next.
