

Stephen Burega on Romios Gold's Recent Strides Forward in High-Grade Copper Exploration in Nevada

written by InvestorNews | March 11, 2024

In this InvestorNews interview, host Peter Clausi sits down with Stephen Burega, President, CEO, and Director of [Romios Gold Resources Inc.](#), (TSXV: RG | OTCQB: RMI0F) to discuss the company's latest exploration achievements. Highlighted in a [news release](#) on October 12, 2023, Romios has made significant strides in Nevada by discovering a high-grade copper boulder train at its Kinkaid project within the Walker Lane trend. This discovery, coupled with the identification of possible porphyry-type alterations, led to the staking of sixteen new claims. The exploration uncovered nine mineralized boulders showing copper values averaging 5.03% Cu and noteworthy gold values, suggesting a sizeable mineralized system just waiting to be fully explored. Under the guidance of John Biczok, VP of Exploration, Romios is poised to further investigate these new and existing claims through detailed mapping and sampling.

The company's exploration strategy, as Burega detailed to Clausi, focuses on leveraging Romios' expertise to tap into underexplored areas, showcasing the efficiency and potential of its Nevada projects. With over 25 targets now identified on the Kinkaid property, every expedition uncovers new potential, underscoring Romios' commitment to cost-effective and impactful exploration. This relentless pursuit of discovery highlights the significant prospects and exciting future that Romios Gold Resources Inc. faces in its quest to unearth valuable copper,

gold, and silver resources.

About Romios Gold Resources Inc.

Romios Gold Resources Inc. is a progressive Canadian mineral exploration company engaged in precious- and base-metal exploration, focused primarily on gold, copper and silver. It has a 100% interest in the Lundmark-Akow Lake Au-Cu property plus 4 additional claim blocks in northwestern Ontario and extensive claim holdings covering several significant porphyry copper-gold prospects in the "Golden Triangle" of British Columbia. Additional interests include the Kinkaid claims in Nevada covering numerous Au-Ag-Cu workings, and two former producers: the Scossa mine property (Nevada) which is a former high-grade gold producer and the La Corne molybdenum mine property (Quebec). The Company retains an ongoing interest in several properties including a 20% carried interest in five of Honey Badger Mining's claim blocks in the Thunder Bay silver district of northwestern Ontario; a 2% NSR on McEwen Mining's Hislop gold property in Ontario; a 2% NSR on Enduro Metals' Newmont Lake Au-Cu-Ag property in BC, and the Company has signed a definitive agreement with Copperhead Resources Inc. ("Copperhead") whereby Copperhead can acquire a 75% ownership interest in Romios' Red Line Property in BC.

Romios Gold continues to get gold, copper & silver showings at their two Nevada Projects, but can they hit the jackpot?

written by InvestorNews | March 11, 2024

Romios Gold Resources Inc.'s (TSXV: RG | OTCQB: RMI0F) ("Romios") focus is on gold, copper and silver exploration in North America. Romios has a 100% interest in five properties in northwestern Ontario, Canada but their recent focus has been on their assets in Nevada, USA. Therefore today's article will give an update on Romios' two projects in Nevada, the Kinkaid Gold-Copper-Silver Project and the Scossa Gold Project.

Stephen Burega of Romios Gold Talks about the Trek Copper & Gold Claims in BC's Golden Triangle

written by InvestorNews | March 11, 2024

In this PDAC 2023 InvestorIntel interview, Stephen Lautens speaks with Stephen Burega, CEO, President, and Director of [Romios Gold Resources Inc.](#) (TSXV: RG | OTCQB: RMI0F) about its Trek claims along the southern boundary of British Columbia's Galore Creek, which is home to a massive copper deposit and proposed copper mine co-owned by Tech and Newmont.

Stephen talks about how the drill-defined Trek North porphyry copper & gold ("Cu-Au") zone and the newly discovered Trek South porphyry Cu-Au target could be attractive targets for a company looking to acquire or partner in a sizeable copper-gold project. He goes on to say that the road that services Galore Creek intersects Trek and Romios also has the advantage of being near the Golden Triangle infrastructure with the proposed Galore Creek mill site only being about 12 kilometres down the road.

He also discusses 2022 geophysical ("IP") work that indicates an unexplored drill target up to 800 metres long, between 250 and 500 metres wide and 600 metres deep, that underlies the centre of the porphyry system at Trek South. Stephen explains that Romios will drill it when they find the right partner to properly explore its potential.

Stephen Burega of Romios

Details Recent Exploration Success at its Gold & Copper Projects in BC and Nevada

written by InvestorNews | March 11, 2024

In this InvestorIntel interview, Byron W King talks to [Romios Gold Resources Inc.'s](#) (TSXV: RG | OTCQB: RMI0F) CEO, President, and Director Stephen Burega about Romios' recently discovered [high-grade gold veins](#) assaying up to 72.6 g/t Au on the North West Claims Project in Golden Triangle, B.C. Located within an area that is known for very significant large-scale porphyry structures, Stephen discusses the North West Claims Project's proximity to [Galore Creek](#), one of the world's largest undeveloped copper-gold-silver porphyry deposits.

Stephen goes on to discuss Romios Gold's two core projects from its portfolio of projects in Nevada, USA. Highlighting the potential for high-grade gold mineralization at the Scossa Project, a former producing mine, Stephen discusses the potential for mineralization below the previous workings. At the Kinkaid Project in southwestern Nevada, he also discusses rock sampling around previous mine workings that returned "multi-percent copper, high-grade gold, or high-grade silver mineralization".

All I Want for Christmas is a

Crowdfunding Deal?

written by Tracy Weslosky | March 11, 2024

As we head into the festive season our minds turn towards gifts for our family and friends as we celebrate the end of another year and hopefully take a well-earned break. For those who are investor orientated and might like to buy some investments for your children, you may consider investing via a crowdfunding platform as part of your holiday investment buffet*.

Crowdfunding in the capital markets has been around for many years and is often considered a higher risk/higher return way of investing. This is because companies that are usually seeking to raise funds via the typical crowdfunding platforms are usually very early-stage start-ups that do not yet have access to traditional stock markets.

In the past, this was not something I ever entertained simply as I prefer the stock market; however, it's clear this investment outlet is here to stay. So, when some colleagues of mine sent me the Copperhead Resources Inc. deal update that we were involved in, I thought – let's check out where the crowdfunding platform formula is today.

There are numerous crowdfunding platforms available these days and in my experience in anything having to do with my own funds, I like to stick with platforms that are well-established (a), possess a good track record (b) and have a management team (c) that shows evidence of a and b.

Again, a new format for my investment style, allow me to share with you what Wikipedia lists as the top 3 American platform platforms are, and they list: [Kickstarter](#), [Indiegogo](#), and [Crowd Supply](#). Of interest, and more specifically: "As of January 2021, Kickstarter has raised more than \$5.6 billion spread over

197,425 projects.”

Now the Copperhead Resources deal is listed on Vested.ca and the link they sent me was as follows <https://vested.ca/projects/view/152>. Vested.ca, which is not one of the Top 3 from Wikipedia [states](#): “Vested.ca is Canada’s top equity *crowdfunding* portal.”

(*) Now this is where I remind everyone that I am not a licensed investment advisor, and this column is intended to neither provide advice on investing nor imply that crowdfunding is a good idea. And more specifically, my interest in this crowdfunding deal comes from the fact that Copperhead has [an option agreement](#) with TSXV-listed [Romios Gold Resources Inc.](#) (TSXV: RG | OTCQB: RMI0F) to purchase 75% of the Red Line Property, and I introduced the parties that made this deal. As such, this crowdfunding model was relayed to me from the primaries, and intrigued, I committed \$500 on the Vested.ca site. I found the experience surprisingly fun, and easy.

Further to this, I enjoyed the update on Vested.ca on the Copperhead **Red Line Property claims that states**: “*The Red Line claims cover over 1,851 hectares and are located in the central part of the ‘Golden Triangle’ mineralized district of Northwest British Columbia. In addition, the Issuer will continue to identify and potentially acquire additional property interests and conduct exploration and evaluation to assess their potential.*”

Copperhead has completed an initial \$100,000 exploration program at the Red Line Property and commissioned a NI 43-101 compliant technical report that could be publicly filed in the coming weeks.

Canada’s Golden Triangle is a region famous for large gold discoveries and mines. The claims are situated along the “Eskay

Rift” belt of rocks that host the Eskay Creek Au-Ag deposit 30 km to the south.

The founder and CEO of Copperhead is [Damian Lopez](#). He is a venture capital markets professional with over a decade of experience creating, structuring, financing, and taking companies public. Mr. Lopez was one of the founders of [Lithium Ionic Corp.](#) (TSXV: LTH | OTCQB: LTHCF) which raised over CAD\$45 million and completed its TSXV listing in May 2022.

Copperhead intends to use the raised funds to “undertake a two-phase exploration program on the Red Line Property.”

Source: [Romios Gold news April 6, 2022](#)

Closing remarks

Very early-stage investing* is more risky but it carries potentially higher rewards if the company succeeds. This means

investors need a high-risk tolerance, longer time frame, and should invest with smaller dollars that they don't need for the next 7 years+.

The minimum investment is only [C\\$100](#) with the offering of up to 2,000,000 Special Warrants at C\$0.10.

Sounds well suited as a Christmas gift for a 14-year-old, who might potentially end up with an even bigger present when they turn 21-year-old, assuming Copperhead Resources succeeds and the warrants are liquid to sell at a later date.

Note (): Please read the full [offering document](#) and where necessary seek independent financial advice. This discusses conversion rights, risk factors, and much more; and the writer Tracy Weslosky* is not a licensed investment advisor and has shares in the Copperhead Resources Inc. deal.*

Stephen Burega on what Survey Results may offer Romios Gold Shareholders

written by InvestorNews | March 11, 2024

In this interview Peter Clausi has [Romios Gold Resources Inc.](#)'s (TSXV: RG | OTCQB: RMIOF) CEO, President, and Director Stephen Burega discuss about being a multi-jurisdictional exploration company focused primarily on gold, copper and silver. Starting the discussion on the "...newly discovered, copper and tungsten bearing skarn" released from the [2022 IP \(Induced Polarization\) survey](#) at the Trek South Project in BC's Golden Triangle,

Stephen explains how these results offer the potential for substantial mineralization on the project.

Covering a wide range of topics around Romios Gold's portfolio of assets and projects, Stephen goes on to discuss Romios' Kinkaid Project and Scossa Gold Project in Nevada, which is ranked as one of the top mining jurisdictions in the world. As a former high-grade gold producer, Stephen says that some of the ores at the Scossa Gold Project were so high that it was stored in a bank vault.

Has gold lost its shine for investors?

written by InvestorNews | March 11, 2024

Today I want to look at a small, but intriguing exploration play. But first let's address the price of gold, as in, what's going on?

In recent weeks, gold has traded in a range, more or less around the high (USD) \$1,700s per ounce. The metal has had a tough time even breaking \$1,800 lately.

Many things contribute to gold currently being stuck in neutral. The U.S. dollar has been remarkably strong against other currencies, so that alone helps keep a lid on the gold price. And the Federal Reserve has raised interest rates, which makes bonds more attractive and adds opportunity cost to holding a stash of gold metal.

Meanwhile, modern economic and academic culture holds gold in disdain, based on several generations of people learning in school that gold is an outdated form of wealth protection, let alone a way to grow wealth over time.

The point is, some things are out of our control. The price of

gold is what it is. Markets do what they do. The culture is fixed and it's not as if you or I can change things.

Meanwhile, many gold mining junior companies – explorers and early stage developers – are badly beaten down in the markets. They are way oversold and there's opportunity to be had in this situation.

Right now, across the gold and mining investment space, there's no particular excitement for the gold juniors, especially the explorers and early-stage developers, outside of an occasional hot press release about drilling results, and even then we usually see a slight uptick followed by a sell-side downdraft.

In essence, gold is in a holding pattern in terms of price, while the junior sector is just treading water in the case of most companies. There's little new money moving in, that's for sure.

So it can all seem pretty grim. But it also sets up opportunities for immense profit downstream if you are in a position and mindset to buy, hold and wait for the wheels of fate to turn.

I like to focus on a few investment basics. That is, I look for companies with solid assets, great technical teams and superb management. These companies hold mineral claims in safe jurisdictions. They don't do "vaporware," meaning that they hold real minerals in the rocks. You can see a current resource, or anticipate a worthy and solid report coming down the line. And people running the show know what they're doing.

Sooner or later, the upside will arrive and some of these plays have the opportunity to become attractive to far more than just the current crowd of gold and mining die-hards.

One company like this, which I've watched for a while, is [Romios Gold Resources Inc.](#) (TSXV: RG | OTCQB: RMIOF). Currently trading at around US 3 cents per share (about 4 cents Canadian) Romios Gold's market cap is about \$7 million (U.S.). It's small, but despite this, Romios holds a collection of assets that ought to prompt gold investors to take a serious look.

Romios holds claims in the Golden Triangle of British Columbia, in much the same geology and along many of the same trends as such names as Brucejack, Eskay and Galore. Field work reveals excellent gold potential, along with copper mineralization in likely porphyry structures.

Romios also holds claims in Ontario, near the massive Musselwhite gold project. Romios has much the same geology underfoot as the past and presently working mines, again with excellent gold upside potential.

In addition, Romios holds mining claims in Nevada, in hard-rock areas in the west of the state. That is, it's not Carlin-style gold, with all the problematic issues that come with exploration and production of that kind of rock. Instead, Romios works in classic mining country, and has already identified mineralized zones with visible gold within extensive vein systems.

Each of these locales – B.C., Ontario and Nevada – have their own geological story to tell. And at this stage I won't belabor the points or write extensive geological descriptions. Those details can be found on the company's [website](#), along with recent press releases.

Meanwhile, from public documents and discussions with management I know that Romios has been gathering field data over the past year, and especially over this summer. Some press releases to date from Nevada have been remarkable in terms of gold and copper.

Like many junior miners, Romios holds a larger inventory of mineralized claims than its bank accounts can afford to explore, let alone develop. Then again, that's what joint ventures and similar kinds of deals are made for. There's no reason to think that Romios will continue to work alone, and solely on its own account. More likely, we'll see some dealmaking. And those deals will begin to shine light on what the company has in the barn, so to speak.

Indeed, the old term "barn find" is apropos for Romios. To use an analogy, I'm reminded of the stories you occasionally hear about someone who discovers a collection of classic old cars sitting under canvas tarps in some old barn out in the middle of the countryside. There's definite potential for a Wow-factor here as you pull back the tarps.

With Romios that wow-factor pertains. The company holds an impressive inventory of assets with strong potential upside. At this point the real question is how long, and what level of investment will it require to bring one or more of these assets to the attention of a marketplace that's currently bored, if not downright demoralized.

As the summer field season finishes up, and we move into the fall, I suspect it will be worth watching for more news from Romios.

Stephen Burega of Romios Gold

talks about its 'treasure chest' of properties

written by InvestorNews | March 11, 2024

In this InvestorIntel interview host Byron W King talks to [Romios Gold Resources Inc.](#) (TSXV: RG | OTCQB: RMIOF) President and newly-appointed CEO Stephen Burega about Romios's "treasure chest" of exploration properties.

In the interview, which can also be viewed in full on the InvestorIntel YouTube channel ([click here](#)), Stephen Burega talks about the company's plans after taking over from Tom Drivas this month and becoming [Romios's new CEO](#). "I was amazed at the company's portfolio," he tells Byron. "It was the main reason why I joined the team – these assets are extraordinary and diverse," including over 400 square kilometers of claims along the southern boundary of Galore Creek, B.C., which has a new 3D model and work for a resource estimate underway.

"We also have a very large block of claims in northwestern Ontario," he tells Byron, "that's surrounding Newmont's Musselwhite mine." Talking about future plans, Stephen says that Romios is "looking at how we can either find a strong partner to move some of these assets forward or else the possibility is very real that we might spin them out." In addition, he says that Romios's Nevada properties are "going to become our primary focus" including two core assets – the former high-grade gold producing Scossa mine and the recently acquired Kinkaid project, which reported quartz vein [assay samples of up to 17.9 g/t Au](#) in June.

Additional interests include two former producers, the La Corne molybdenum mine property (Quebec), a former high-grade gold producer – the Scossa mine property (Nevada), and the Kinkaid

Nevada claims covering numerous Au-Ag-Cu workings. The Company also retains an ongoing interest in several properties including a 20% carried interest in five of Honey Badger Mining's claim blocks in the Thunder Bay silver district of northwestern Ontario; a 2% NSR on McEwen Mining's Hislop gold property in Ontario; and a 2% NSR on the Newmont Lake Au-Cu-Ag property in BC now owned by Enduro Metals Corp.

Romios Gold with huge potential exploration upside trades on a tiny market cap of C\$10M

written by InvestorNews | March 11, 2024

[Romios Gold Resources Inc.](#) (TSXV: RG | OTCQB: RMI0F) (Romios) is a junior precious and base metals explorer with a lot going on, all in North America. Romios' properties are prospective for gold, silver, copper, cobalt, and molybdenum. Romios' Golden Triangle properties have gold-copper porphyry style mineralization and are located in a region known for some spectacular successes.

The [Golden Triangle region](#) is known for having some very large discoveries and mines such as the Galore Creek Project (M&I resource of 9.3 million ounces of gold, 150 million ounces of

silver and 5.1 million tonnes of copper), Eskay Creek-Au-Ag deposit, Brucejack Au mine ([produces 311,000 Oz Au pa](#), acquired recently by Newcrest buying Pretivm for [\\$3.5 billion](#)) and the Red Chris Cu-Au mine.

So yes, the Golden Triangle is a BIG deal location for gold explorers.

Canada's Golden Triangle is famous for large gold discoveries and mines – Galore Creek, Eskay Creek, Brucejack and Red Chris

Source: [Romios Gold Resources website](#)

Romios' properties by location include:

- **Golden Triangle (British Columbia, Canada)** (flagship region with [79,789 ha](#)) – Trek, JW, Newmont Lake (under option to Enduro Metals Corp.), Royce/Porc.
- **Ontario (Canada)** – Lundmark-Akow Lake, Timmins Hislop Gold Project.
- **Quebec (Canada)** – La Corne Molybdenum Project.
- **Nevada (USA)** – Scossa Gold Project.

Romios' Golden Triangle potential

Some exciting news [announced](#) by Romios back on November 22, 2021, which it would seem the market has not fully digested. The news concerned the Trek South Property and [stated](#):

“Romios outlines a new >1 km wide porphyry-style Cu-Au-Ag system on its Trek South Property in the Golden Triangle, B.C. The program has partially delineated a **>1 km wide zone of porphyry-style alteration and veinlet-hosted Copper-Gold-Silver** (Cu-Au-Ag) mineralization. As a result, Trek South is now a high priority target for geophysical surveys and diamond drilling in

2022 along with the Company's previously identified Trek North copper-gold porphyry zone which returned impressive drill intercepts including **131 m grading 0.6% Cu, 0.39 g/t Au and 8.5 g/t Ag** in past campaigns ([See Press Release – October 22, 2008](#)).....The Trek South target is 3 km SSW of Trek North and may lie along the same structural corridor as reflected by the nearby Trek Fault and a series of intervening Cu-Au-Ag prospects (See Map 1)."

The above news means the Trek Property (Trek North & Trek South) is shaping up to be a potential game-changer for Romios if they can prove up a significant size copper-gold-silver resource.

Romios Gold Resources' properties in Canada's Golden Triangle (shown in red) including Trek North and Trek South, JW, Newmont Lake (optioned to Enduro)

Source: [Romios Gold Resources website](#)

Romios acquires silver-copper prospects in Nevada

In other recent news, Romios [announced](#) that it "has acquired 109 claims over numerous historic gold-silver-copper prospects in the Kinkaid area of Mineral County, Nevada."

Closing remarks

Romios has recently successfully [raised capital](#) (and [received 4 million shares of Enduro Metals](#) pursuant to Newmont Lake Option Agreement) to further their exploration efforts, especially in the prolific region of Canada's Golden Triangle. In 2022, Romios plans to do geophysics and [further drilling](#) at Trek North and Trek South.

For investors looking at a gold junior with huge potential

exploration upside then don't go past Romios Gold Resources. It trades on a tiny market cap of [~C\\$10 million](#) and is exploring in a proven billion dollar region with several exciting 100% owned properties as well as the optioned out property at Newmont Lake. I have not even had time to discuss their exciting Ontario projects including at the well known Timmins region.

Investors will need plenty of patience and expect some stock dilution along the way, as finding significant gold is not easy.

One of the most exciting junior gold companies out there. Let's see if they hit it big in 2022.

Disclosure: The author intends to go long Romios Gold Resources Inc. (TSXV: RG) in the next 24 hours.
