

Jim MacKenzie on Viscount's high grade drill results from "potentially the largest silver deposit in the US"

written by InvestorNews | February 2, 2021

In a recent InvestorIntel interview, Peter Clausi speaks with Jim MacKenzie, President, CEO and Director of [Viscount Mining Corp.](#) (TSXV: VML | OTCQB: VLMGF) about Viscount's high grade silver assay results at Silver Cliff Project, which according to the company is "[potentially the largest silver deposit in the U.S.](#)"

In this InvestorIntel interview, which may also be viewed on YouTube ([click here to subscribe to the InvestorIntel Channel](#)) Jim starts: "I certainly think we are coming out of a bear market in the resource sector...(and) am extremely bullish on gold and silver."

About Viscount Mining:

Viscount Mining is a project generator and an exploration company with a portfolio of silver and gold properties in the Western United States, including Silver Cliff in Colorado and Cherry Creek in Nevada.

The Silver Cliff property in Colorado lies within the historic Hardscrabble Silver District in the Wet Mountain Valley, Custer County, south-central Colorado. It is located 44 miles WSW of Pueblo, Colorado, and has year-around access by paved road. The property consists of 2,319.48 hectares where high grade silver,

gold and base metal production came from numerous mines during the period 1878 to the early 1900's. The property underwent substantial exploration between 1967 and 1984.

The property is interpreted to encompass a portion of a large caldera and highly altered sequence of tertiary rhyolitic flows and fragmental units which offers potential to host deposits with both precious and base metals. This has been demonstrated in the mineralization historically extracted from the numerous underground and surface mining operations. Drilling in the 1980s by Tenneco resulted in a historical pre-feasibility study on which basis it was planned to bring the property to production. The plan was abandoned following a takeover by another company.

The Cherry Creek exploration property is in an area commonly known as the Cherry Creek Mining District, located approximately 50 miles north of the town of Ely, White Pine County, Nevada. Cherry Creek consists of 320 unpatented and patented claims as well as mill rights and is comprised of more than 2,658 hectares. Cherry Creek includes more than 20 past producing mines.

Frank Basa on Canada Silver

Cobalt's recent high-grade gold mineralisation and silver vein discovery

written by InvestorNews | February 2, 2021

In a recent InvestorIntel interview, Tracy Weslosky speaks with Frank Basa, CEO and Director of [Canada Silver Cobalt Works Inc](#) (TSXV: CCW | OTCQB: CCWOF), about the announcement of intersecting high-grade gold mineralisation and discovering a new, additional, high-grade silver vein at the Castle property.

In this InvestorIntel interview, which may also be viewed on YouTube ([click here to subscribe to the InvestorIntel Channel](#)), Frank reviews Canada Silver Cobalt's most recent [discovery of gold](#) and comments "...we found visible gold. I think nobody else has ever found it in the camp. Silver with the gold will make this deposit quite significant."

In a [previous](#) InvestorIntel interview, President & COO Matt Halliday stated that Canada Silver Cobalt has a resource of 7.5 million ounces at over 8000 grams per ton inferred. Commenting on how the [new silver vein](#) affects such previous statements, Frank said, "...we have a grade of about 250 ounces per ton in our inferred resource. It is unique, probably the highest grade resource that I am aware of globally."

About Canada Silver Cobalt Works Inc.

Canada Silver Cobalt Works released the first-ever resource in the Gowganda Camp and greater Cobalt Camp in May 2020. A total of **7.56 million ounces** of silver in Inferred resources comprising very high-grade silver (**8,582** grams per tonne un-cut

or **250.2** oz/ton) in 27,400 tonnes of material from two sections (1A and 1B) of the Robinson Zone beginning at a vertical depth of approximately 400 meters. The discovery remains open in all directions (1A and 1B are approximately 800 meters from the east-trending Capitol Mine workings) (mineral resources that are not mineral reserves do not have demonstrated economic viability) (refer to Canada Silver Cobalt Works Press Release May 28, 2020).

Canada Silver Cobalt's flagship Castle mine and 78 sq. km Castle Property feature strong exploration upside for silver, cobalt, nickel, gold and copper in the prolific, past-producing Gowganda high-grade Silver District of Northern Ontario. With underground access at Castle, a pilot plant to produce cobalt-rich gravity concentrates on site, a processing facility (TTL Laboratories) in the town of Cobalt, and a proprietary hydrometallurgical process known as Re-20X for the creation of technical grade cobalt sulphate as well as nickel-manganese-cobalt (NMC) formulations, Canada Silver Cobalt is strategically positioned to become a Canadian leader in the silver-cobalt space.
