

Harte Gold CEO on Ontario's newest high-grade gold mine in the last 10 plus years

"We actually have now shipped three shipments out of our Sugar Zone mine site, so the company is now a producer. We had a grand opening on the 24th of October that was attended by the Premier of the Province, Doug Ford and the Mines Minister Greg Rickford. We had about 300 people on site. It was a very excellent day, let us put it that way, to open this new facility. It is Ontario's newest high-grade gold mine probably in the last 10 plus years." States Stephen Roman, Chairman, President and CEO of Harte Gold Corp. (TSX: HRT), in an interview with InvestorIntel Corp. CEO Tracy Weslosky.

Tracy Weslosky: Now you just announced your gold pour, two weeks ago, three weeks ago?

Stephen Roman: Yes. We actually have now shipped three shipments out of our Sugar Zone mine site, so the company is now a producer. We had a grand opening on the 24th of October that was attended by the Premier of the Province, Doug Ford and the Mines Minister Greg Rickford. We had about 300 people on site. It was a very excellent day, let us put it that way, to open this new facility. It is Ontario's newest high-grade gold mine probably in the last 10 plus years.

Tracy Weslosky: This is a significant accomplishment. For those of you out there with all of your cannabis dough, can you tell them why they should look at Harte Gold?

Stephen Roman: I think the cannabis group needs to take some profits and put it into the next rising sector, which will be gold and uranium and other commodities. They have been depressed for a while and now I think they are starting to

move. We as a new producer, a new high-grade producer here in the Province of Ontario have a lot of upside. The last company that was in our area that was taken over by a significantly larger company had a similar sized operation to us they went out for almost a billion dollars Canadian. Our market cap is \$250 million right now. If we start to move up into that level it will be a significant rise for anybody getting in at this point.

Tracy Weslosky: Earlier this year Stephen you also announced tripling your resource. Is that correct?

Stephen Roman: That is correct. That was the last NI 43-101 we put out. That was for drilling done in 2017. We went from about a half a million ounces to 1.5 million ounces so a very large increase. What we are doing now, of course, we kept drilling and we have been drilling through 2018. We will have another resource update in the first quarter. We expect another increase in our resource.

Tracy Weslosky: For all of you InvestorIntel members following the Australia gold buzz and you are looking for a gold story here in Canada, can I have you back up and try and give us an overview of the Sugar Zone Project and just introduce us to it please Stephen.

Stephen Roman: Okay. The Sugar Zone was discovered about the time of the Hemlo deposit in the early eighties. Really it languished there. It was viewed as a small insignificant deposit. When we took over managing the company in 2009 there was about 100,000 to 150,000 ounces. Subsequently did a drill program and built that up to a half a million ounces. The following drill program built that up to a million and a half ounces. It is a project that has got a lot of legs. It is open on strike down dip and it just requires the work and the drilling to prove up a larger resource...to access the complete interview, [click here](#)

Roman says Harte Gold has done what it told investors it would achieve

Harte Gold Corp. (TSX: HRT) is developing the Sugar Zone  property, White River, Ontario. It is a high grade deposit open at depth and on strike. There's an Indicated Resource of 980,900 tonnes, grading 10.13 grams/tonne for 319,280 ounces of contained gold (uncapped) and an Inferred Resource of 580,500 tonnes, grading 8.36 g/t Au for 155,960 ounces of contained gold (uncapped).

April 20, 2016 – In a special **InvestorIntel** interview, Publisher Tracy Weslosky speaks with Stephen Roman, Chairman, CEO and President of Harte Gold Corp. – and also the winner of the “Prospector of the Year” award at the recent PDAC in Toronto.

In this interview, Stephen Roman tells how

- Harte Gold has justified the faith of investors by getting into production. Production costs are 600oz compared to a present gold price over \$1,200/oz.
- Has substituted a bond issue for a gold loan, which is a much better deal for the company; and
- Harte will finalize permitting and move seamlessly into commercial production.

Tracy Weslosky: Stephen I'm lucky to even have a moment with

you. Your stock moved up 142% last week. Can you tell us what is moving your stock?

Stephen Roman: Well, I think actually there's a few things that are moving the stock. One is that people at the PDAC, which was last week, they saw some of our videos. They noticed that we were actually going into production and things that we told them a year ago were actually coming true now. They could see the trucks moving and the drilling and the last thing going on and they said, hey, this is a real story.

Tracy Weslosky: I noticed mining strategist Christopher Ecclestone was saying the sweet zone of the Sugar Zone and he was talking about how Harte Gold is ranking for leader in your race towards production. Can you give us an update on production?

Stephen Roman: Production will start in two weeks. We'll be shipping gold ore to Barrick for milling and so April will be our first production month under our bulk sample program so cash flow will start in May.

Tracy Weslosky: For those of the InvestorIntel audience that may not be familiar with the Harte Gold story, can you just give us a little bit of an overview of Harte Gold and your deal with Barrick for instance Stephan? Thank you.

Stephen Roman: Barrick have a mill 60km away from Harte and, rather than us building our own mill, we made a deal with Barrick to toll mill our ore during this bulk sample phase. We pay them a fee and they mill the ore and give us a check every month.

Tracy Weslosky: Well, and of course there is a bit of a rumbling happening about a gold rush happening. I was reading recently that your production costs are quite low: \$600.00, is that correct? Can you tell us a little bit more about this?

Stephen Roman: The ore body is very high-grade, 10 grams per ton. It's probably one of the highest in the world. I think Red Lake may have similar grades, but our grade being so high we don't have to mine a lot of tons to make the ounces so that keeps the costs very low.

Tracy Weslosky: I need you just to dumb down the bulk sampling deal that you have just a little bit for our audience and explain why this is so exciting.

Stephen Roman: Well it's exciting because it proves up the ore body. It proves up the mining method. It proves our costs and, sort of, you know, puts the rubber stamp on the whole Sugar Zone project.
