

# How to Play the Coming Market Cleanup – Including Five Names To Watch

Broad markets are down this week in a wide, deep selloff. Or for optimists out there it's a general cleanup across the spectrum, punishing the overly ambitious. Gold is down too, as I'll discuss below.

Here's what's going on, and towards the end I'll list five "mine and minerals" ideas on how to play it all.

First, and obviously, markets have declined based on negative sentiment. And why? After all, is there any good news out there? Consider:

- War in Ukraine, rapidly emerging as a new, generational East-West struggle.
- Structural, built-in inflation across every economy in the world.
- High oil and natural gas prices, with production and supply issues worldwide that have translated into shortages.
- The nat-gas shortages have led to a lack of fertilizer which – rolled in with high oil/diesel prices – foretells of eventual, widespread food scarcity.
- All of the above, while the global cargo ship economy remains mired in clogged ports, amplified by Covid shutdowns in China.
- And people have finally caught onto the racket of those high flying, profitless tech companies with business plans that lose money, seemingly forever.

I could go on, but you get the picture. It's a mess out there and getting messier. Not exactly the foundation of a booming global economy as 2022 unfolds.

So yes, people feel negative, sell out, and go to cash. They de-risk, so to speak.

Which brings us to gold, which is sliding. And here's the quandary: Why sell gold into a de-risking market? Gold ought to represent long-term security in a time of risk, right?

The sell-side argument is that interest rates are rising, and rising rates raise the carry cost for holding gold. That is, physical gold is "just metal" and doesn't pay a dividend. So, every ounce in the vault is a missed opportunity to generate cash. And the imputed loss on gold (i.e., versus holding cash) is greater when interest rates are high.

It's not difficult to understand the argument, but I don't buy it. Because look at the situation from a different angle.

Per the U.S. government's own statistics, inflation is running in the 8.5% range – and the true number might be twice that if you follow what is called "shadow statistics." In that respect, holding cash also has a cost, namely that 8.5% inflation rate (or more) per year of vanishing purchasing power.

Here's the investor choice: hold cash and generate minor amounts of interest in an environment of rising inflation. Or hold gold and protect the wealth basis against declining purchasing power over time.

Indeed, the Fed threatens the world with small interest rate increases of 0.25% or even 0.5%. Okay, but that's insignificant when compared with the 8.5% (or more) declining value of cash.

So, why have people sold gold down in recent days? Well, sometimes you don't sell what you want to sell. You sell what you have to sell. Like if you need fast cash.

You sell gold because it's liquid and always catches a bid.

That's not necessarily the case with many other investment ideas.

During market sell-downs the price of gold often drops early, such as when overstretched people need cash to cover margin calls. But after that early tumble, gold tends to be among the first plays to recover on the other side of the selloff and cleanup.

Along with the declining price of gold, metal miners often head down too. Good companies drop in value for no good reason. The list is long and includes names that hold great assets with serious ore in the ground, coupled with excellent geologic work, facilities, workforce and management teams.

There's no saying how long the current selloff will last. Will the market find a bottom and then head back up? Or will more downside yet unfurl? Nobody really knows, and things can change in a matter of hours.

But along these lines, I have five names for you, companies in the gold and related metals space that have tumbled in recent days into bargain-hunt land:

One great up-and-running metal miner is **Avino Silver & Gold Mines Ltd. (NYSE American: ASM | TSX: ASM)**. This company has operated near Durango, Mexico since 1968. The ore body is a deep-running series of veins that were first discovered in 1548 by Spanish explorers/conquistadores. There's a full package of mineshafts, mills and processing facilities. Much of the operation was closed during Covid, but it's all getting back into production. Ore grades are excellent, with continuing discovery as mining progresses. Plus, an offtake agreement with Samsung for all the metals.

And here are a couple of names for companies well-along in the exploration side, with superb results to date and great prospects ahead:

Take a look at **American Pacific Mining Corp. (CSE: USGD | OTCQX: USGDF)**. This company controls a major copper exploration play in Madison, Montana and is partnered-up with giant Rio Tinto to explore a skarn-porphyry, mineral-bearing body. Progress – meaning mineralization uncovered – has been excellent over the past 18 months, with numerous unreleased drill results still to come. Meanwhile, Am-Pac holds 100% of two other outstanding, high-grade, near-surface gold plays in hard-rock mining country in Nevada.

And look at **Group Ten Metals, Inc. (TSXV: PGE | OTCQB: PGEZF)**. This is another company that works in the nickel-platinum belt of Montana, adjacent to property controlled by Sibanye-Stillwater. Group Ten controls a vast land package and has had remarkable success identifying high-grade zones of copper-nickel, along with platinum group metals, gold, silver and even chrome. Indeed, it's a "battery metals" play from numerous angles.

For early-stage gold exploration, look at **TRU Precious Metals Corp. (TSXV: TRU | OTCQB: TRUIF)**. The company works in Newfoundland, in a highly prospective gold-copper belt. Its neighbors include two well-known names, Marathon Gold and Newfound Gold Corp., and TRU is directly on the geologic trend that connects these other two plays. Early sampling, mapping and geophysics are promising, with drill results offering strong promise.

And finally, another early-stage explorer, **Romios Gold Resources Inc. (TSXV: RG | OTCQB: RMIOF)**. This is what geologists call a "hip pocket" play, an intriguing collection of historically explored and mined projects across Canada and in Nevada. Right now, the focus is on two high-grade works that were picked in the olden days, but abandoned to the mists of time due to low-priced gold. Modern geophysics and drilling reveal significant new mineralized zones. Romios is a small-cap play, but with the ability to move on news from the drill deck.

That's all for now... Thank you for reading.

---

# Joel Freudman talks about gold and copper advances at TRU Precious Metals' Golden Rose Project

In this InvestorIntel interview with host Byron W. King, TRU Precious Metals Corp.'s (TSXV: TRU | OTCQB: TRUIF) Co-Founder, CEO & Director Joel Freudman provides an update on the drill program at TRU's Golden Rose Project in Central Newfoundland.

In the interview, which may also be viewed on the InvestorIntel YouTube channel ([click here to subscribe](#)), Joel Freudman talks about their Golden Rose Project's strategic location in Newfoundland, situated between two major gold deposits. With Eric Sprott and TSX listed Altius Minerals as the largest shareholders, Joel discusses TRU's new IP survey results and gold zone modelling from the Golden Rose Project which showed strong indications for copper in addition to gold.

## **About TRU Precious Metals Corp.**

TRU is on a mission to build long-term shareholder value, through prudent natural resource property development and transactions. Currently TRU is exploring for gold and copper in the highly prospective Central Newfoundland Gold Belt and has an option with TSX-listed Altius Minerals to purchase 100%

of the Golden Rose Project. Golden Rose is a regional-scale 236 km<sup>2</sup> land package, including 45 kilometres of strike length along the deposit-bearing Cape Ray – Valentine Lake Shear Zone directly between Marathon Gold’s Valentine Gold Project and Matador Mining’s Cape Ray Gold Project.

## **Stephen Lautens of TRU Precious Metals announces discoveries in Central Newfoundland's Gold Belt**

In a recent InvestorIntel interview, Chris Thompson spoke with Stephen Lautens, President of TRU Precious Metals Corp. (TSXV: TRU | OTCQB: TRUIF) about TRU's recent news release on intersecting gold in new drill results from their Golden Rose Project in Central Newfoundland, Canada and about Stephen recently being appointed President of TRU Precious Metals.

In this InvestorIntel interview, which may also be viewed on YouTube ([click here](#) to subscribe to the InvestorIntel Channel), Stephen Lautens shared why he decided to join TRU Precious Metals and went on to highlight the proximity of the Golden Rose Project to major known gold deposits in the prolific Central Newfoundland Gold Belt. Speaking about the "gold rush in Newfoundland", Stephen went on to provide an update on TRU's 3D IP survey at the Golden Rose Project to identify the best targets in the various high-priority areas.

## **Joel Freudman on reporting gold in the initial assay results from TRU Precious Metals' drill program at the Golden Rose Project in Central Newfoundland**

In a recent InvestorIntel interview, Tracy Weslosky spoke with Joel Freudman, Co-Founder and CEO of TRU Precious Metals Corp. (TSXV: TRU | OTCQB: TRUIF) about the initial assay results from the recent drill program at TRU's Golden Rose Project in Central Newfoundland, Canada.

In this InvestorIntel interview, which may also be viewed on YouTube ([click here](#) to subscribe to the InvestorIntel

Channel), Joel said that TRU Precious Metals is in a strong cash position while it waits for remaining assay results. With institutional investors like Eric Sprott and TSX listed Altius Minerals as the largest shareholders, Joel went on to say that institutional investors make more than 25% of TRU Precious Metals' shareholder base.

## **TRU Precious Metals is seeing Gold**

In a recent InvestorIntel interview, Tracy Weslosky spoke with Joel Freudman, Co-Founder, President, and CEO of TRU Precious Metals Corp. (TSXV: TRU | OTCQB: TRUIF) about discovering visible gold early in TRU's ongoing 5,000 metre drill program at the Golden Rose Project located in the highly prospective Central Newfoundland Gold Belt.

In this InvestorIntel interview, which may also be viewed on

YouTube (click here to subscribe to the InvestorIntel Channel), Joel Freudman went on to say that TRU's Golden Rose Project, located in a favorable jurisdiction between two significant gold deposits, is highly prospective for gold. With institutional investors like Eric Sprott and TSX listed Altius Minerals as the largest shareholders, Joel provided an update on TRU's acquisitions of prospective ground contiguous to their Golden Rose Project leading to more than doubling the size of the project. In the interview, Joel also discussed the key achievements of TRU Precious Metals as they prepare to exit 2021 with a strong cash position and what to anticipate in 2022.

**Joel Freudman discusses TRU  
Precious Metals’ drill**

# program located between two major gold deposits in Newfoundland

In a recent InvestorIntel interview, Tracy Weslosky spoke with Joel Freudman, Co-Founder, President, and CEO of TRU Precious Metals Corp. (TSXV: TRU | OTCQB: TRUIF) about the company's commencement of a 5,000 metre drill program at TRU's Golden Rose Project located between two major gold deposits in the Central Newfoundland Gold Belt.

In this InvestorIntel interview, which may also be viewed on YouTube (click here to subscribe to the InvestorIntel Channel), Joel Freudman said that his company's Golden Rose Project lies along the same gold-bearing corridor as its neighbors. He went on to say that TRU is in a strong cash position to continue exploration and is led by an experienced team with a track record of success. In the interview, Joel also highlighted TRU's competitive advantages, which have attracted high-profile investors like Eric Sprott, Palisades Goldcorp, and Altius Minerals along with several institutional investors.

# TRU Precious Metals, (Gold), is leveraged for drilling success

Anyone who has read my previous articles knows that when it comes to junior mining companies I'm a big fan of the catalyst provided by the drill bit. Another thing I like is closeology, so I get even more interested when a company is drilling holes on a trend between two existing deposits. Not that there is anything scientific about this, nor does it guarantee there will be any success. Nevertheless, you have to start somewhere, so these are some of the screening tools I use to narrow down the field of mining companies I want to have a look at.

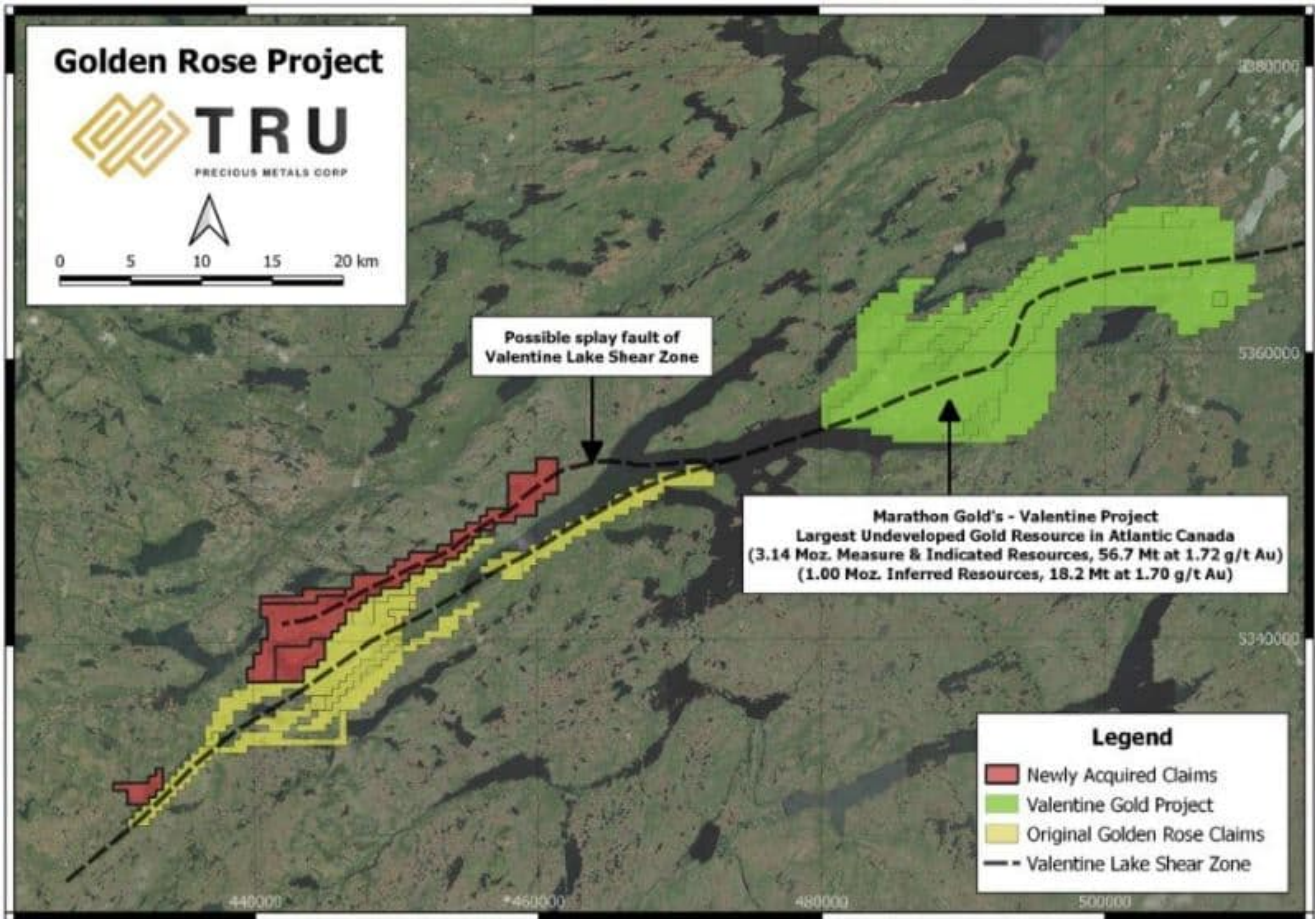

Based on that, it should come as no surprise that today we are going to look at a company that is about to do exactly what I've described above. TRU Precious Metals Corp. (TSXV: TRU |OTCQB: TRUIF) has assembled a portfolio of gold exploration properties in the Central Newfoundland Gold Belt, in Newfoundland and Labrador, Canada. InvestorIntel readers may be scratching their heads thinking that I just wrote about a Newfoundland gold play, and you'd be correct. This is one of the most exciting gold exploration districts in the world right now, so why not double down on the fun. I look particularly at smaller cap names that have a lot more leverage from good news, both theirs and anyone's else in the neighborhood.

TRU spent the first half of 2021 focused on drilling its Twilite Gold Project, completing 12 holes for a total of 2,577 meters at the Fort Knox Gold Zone. All assays have been

completed and highlights include 11.5 metres (m) with 1.03 grams per tonne (g/t) of gold (Au) in hole TL-21-17, 10.5 m with 1.07 g/t Au in hole TL-21-16, 6.0 m grading 1.06 g/t Au in drill hole TL-21-18, 3.0 m grading 0.85 g/t Au in drill hole TL-21-20, and the intersection of 1.00 g/t Au over 2 m in borehole TL-21-27. The drill program successfully extended the known Fort Knox gold zone along strike and down dip and provided valuable geological information to help vector future drill programs in extending the zone. The gold zone remains open to the northwest beyond hole TL-21-17, where the zone is widening, and the gold grades are improving both at depth and along trend in the northwest direction.

The reason TRU drilled Twilite first was because the option agreement to purchase the flagship Golden Rose project closed on May 11<sup>th</sup> of this year. The Company has done three subsequent transactions to further consolidate the area, adding 62 km<sup>2</sup> of contiguous mineral claims in June, another 45 claim covering 1,125 hectares located along trend from the 550m long South Wood Lake Gold Zone in early July, and another deal for 51 contiguous claims adding 12.75 km<sup>2</sup> in mid July. Not surprisingly they needed a little time to figure out where to prioritize the 5,000m drill program announced on Tuesday.

Source: TRU Precious Metals Corp. website

As you can partially see from the illustration above Golden Rose is a regional-scale land package covering 215 km<sup>2</sup>, including approximately 45 km of strike length along the deposit-bearing Cape Ray -Valentine Lake structural corridor between Marathon Gold Corp.'s Valentine Gold Project to the northeast, and Matador Mining Ltd.'s Cape Ray Gold Project to the southwest. Historical drill intercepts on TRU's property include 1.37 g/t Au over 26.3 m, 2.15 g/t Au over 12.6 m, and 19.8 g/t Au over 1.5 m, with visible gold observed. New drilling will focus primarily on target delineation and expansion of known gold mineralization at the Woods Lake Gold Zone and will include a mix of confirmatory/twin holes, infill/delineation holes, and scout holes. The program will also see drilling carried out at the King George IV claims, on which the Company has panned visible gold at the surface, and which has never been previously drilled.

But perhaps the most compelling thing about TRU Precious Metals, right now, is the valuation. At the end of June (their Q2 results), the Company had \$6.5 million in cash and no debt. All the properties that were added at Golden Rose cost them approximately \$25,000 in cash with the rest of the transactions consisting of shares or future expenditures and the Twilite drilling program was basically complete, so most of that cash should still be available. There are currently 67 million shares outstanding making the market cap \$10 million based on yesterday's closing price of \$0.15. That means the market is currently valuing TRU's 34,000+ hectares (84,000 acres) of land at roughly \$3.5 million (after you deduct the value of the cash). Seems to me there is some pretty good leverage here, if there is a good drill result or two.

---

## **TRU Precious Metals' Joel Freudman with Chris Thompson on the Newfoundland Gold Rush**

In a recent InvestorIntel interview, Chris Thompson speaks with Joel Freudman, Co-Founder, President, and CEO of TRU Precious Metals Corp. (TSXV: TRU | OTCQB: TRUIF) about finding gold in the first two drill holes at TRU Precious Metal's Twilite Gold Project and their focus on the Newfoundland gold rush.

In this InvestorIntel interview, which may also be viewed on YouTube ([click here to subscribe to the InvestorIntel Channel](#)), Joel went on to say how TRU Precious Metals has secured five strategically located projects within the prolific Central Newfoundland gold belt with two of the core

properties located along a known gold-bearing structural corridor. “Sandwiched between two major gold deposits,” Joel said that TRU’s flagship Golden Rose Project is located right beside the biggest undeveloped gold resource in Atlantic Canada.

## **Exploring for opportunities at TRU Precious Metals**

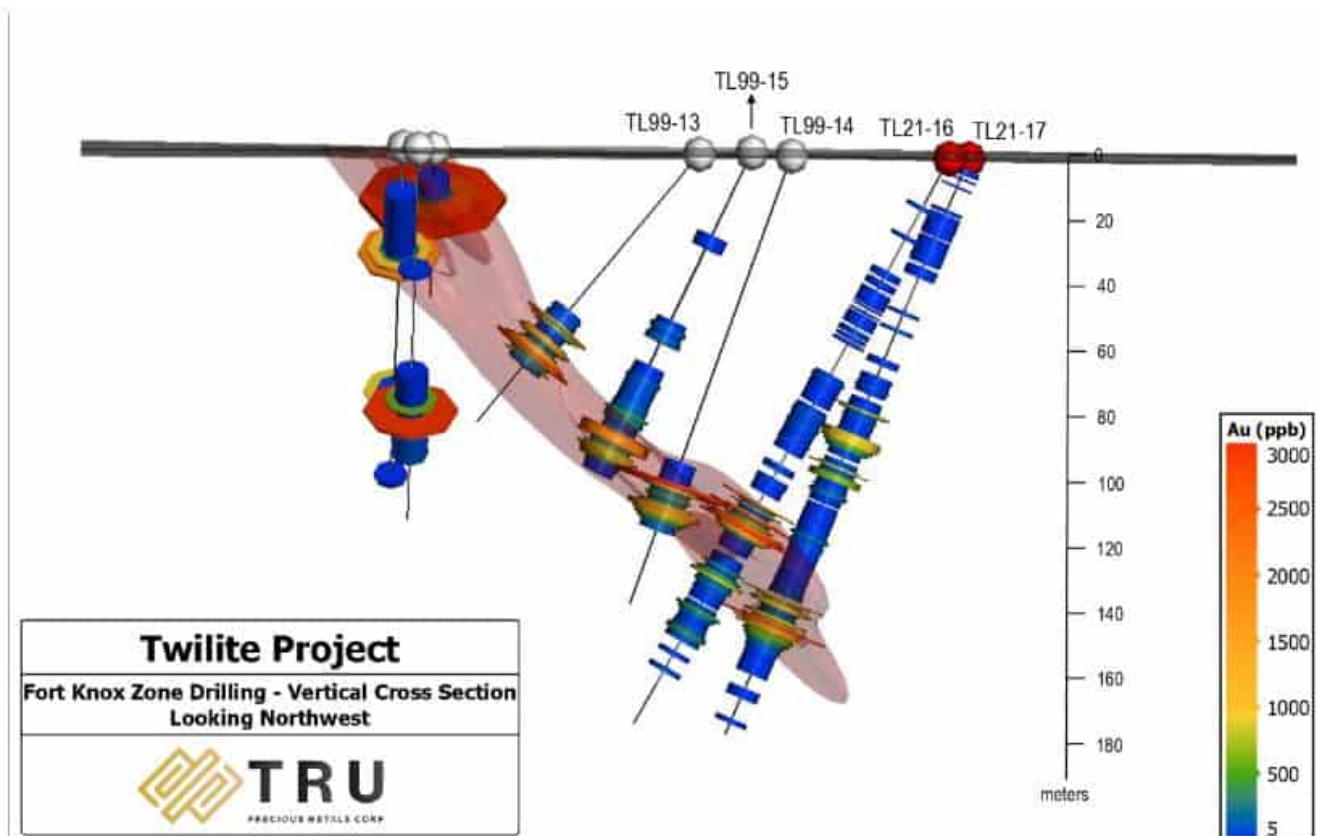

Every once in a while there are times in the markets where you scratch your head and say "I don't get it". For the last few days gold has been treading water around the US\$1,780 – US\$1,790 range. Yet gold equities, pretty much across the board, have been weakening, culminating a dramatic sell off yesterday. Industry stalwarts like Barrick Gold Corporation (NYSE: GOLD | TSX: ABX) (-2.5%), Newmont Corporation (NYSE:

NEM | TSX: NGT) (-3.3%), Franco-Nevada Corporation (NYSE: FNV | TSX: FNV) (-3.4%) to name a few were all taken out to the woodshed and beaten soundly. Sometimes this happens and there is not much you can do about it. What's even worse is if you come out with positive news on a day like this. The macro current will rule the day, regardless of what your news is, unless you've discovered the next Grasberg mine, and even then the market still likely won't give you the credit you are due.

So it's a testament to TRU Precious Metals Corp. (TSXV: TRU | OTCQB: TRUIF) that they were able to remain unchanged in yesterday's trading at \$0.205/share when many of their peers, including some of their Newfoundland neighbors, were down anywhere from -1.7% for Marathon Gold Corp. (TSX: MOZ) to -11.9% for New Found Gold Corp. (TSXV: NFG). So what was the reason for this outperformance on the day? Good news of course, or at least good enough to not be tossed out with the bathwater (so to speak). The Company announced initial assays from the first two holes of the 12 hole, Phase 1 diamond drilling program at its 100%-owned Twilite Gold Project in Central Newfoundland. You can probably guess by now that they found some gold in those drill holes. Highlights include 11.5m with 1.03 g/t of gold in hole TL-21-17, and 10.5m with 1.07 g/t Au in hole TL-21-16. But rather than getting into the details of the drill results, I'll let a couple of pictures tell the story. If that's not enough to satisfy your curiosity, you can go review the entire press release yourself.

Source: Corporate Press Release

Source: Corporate Press Release

Generally speaking, these two recent drill holes confirmed data from historic drilling while also confirming the northwest trend of the mineralization. This gold zone is open downdip on these sections and along strike to the northwest, which is wide open for potential further expansion and becomes an obvious target area for a next phase of drilling. In the meantime, thick sections of altered quartz breccia were encountered in the other nearby holes, so the Company is hopeful for expansion of the gold zone to the southeast as well. Assays from a further 10 drill holes to the southeast are still pending.

The Company has dubbed this area of the Twilite Project the "Fort Knox Gold Zone". Perhaps a little optimistic but investors can hope the name proves prophetic. However, to me this wasn't even necessarily the most interesting news in the press release. As someone always on the lookout for potential catalysts, I found the "Other Exploration Updates" section held a nugget of opportunity (pun intended). TRU provided an update on the final exploration results from its Gander West Property, located approximately 16 kilometers from New Found Gold Corp.'s Queensway Project. If you aren't familiar with what is going on at the Queensway Project you should be. The results coming from here are truly sensational and have sparked quite a gold rush in Newfoundland. It is arguably the hottest gold play in the world right now.

On May 25<sup>th</sup> the Company announced it had commenced its inaugural mapping, soil sampling, till sampling and prospecting program at its Gander West exploration property, followed by an update on July 30<sup>th</sup> that stated all rock and soil geochemical results from the limited-scale field program had been received, with results still outstanding from nine till samples submitted for gold grain analysis. Yesterday's press release reported that all nine of these samples,

submitted to Overburden Drilling Management Limited (“ODM”), contained visible gold grains with pristine gold grains recovered in seven samples, including 17, 12 and 11 pristine grains, in three of the samples. ODM has confirmed to the Company that this could be indicative of Gander West being fertile for gold exploration.

Granted this is pretty pie in the sky stuff and a long way from any sort of validation. Nevertheless, you have to start somewhere and when you are only 16 kilometers away from one of the hottest gold plays on the planet and you have some promising indications, I would suggest that could be an intriguing lead. Meanwhile, there are still results to come from 10 completed drill holes on a far less speculative project that makes TRU Precious Metals Corp. and its \$13.7 million market cap (based on yesterday’s close) something for investors to explore.

## **Located in the heart of the Newfoundland gold rush, TRU Precious Metals doubles its drilling program**

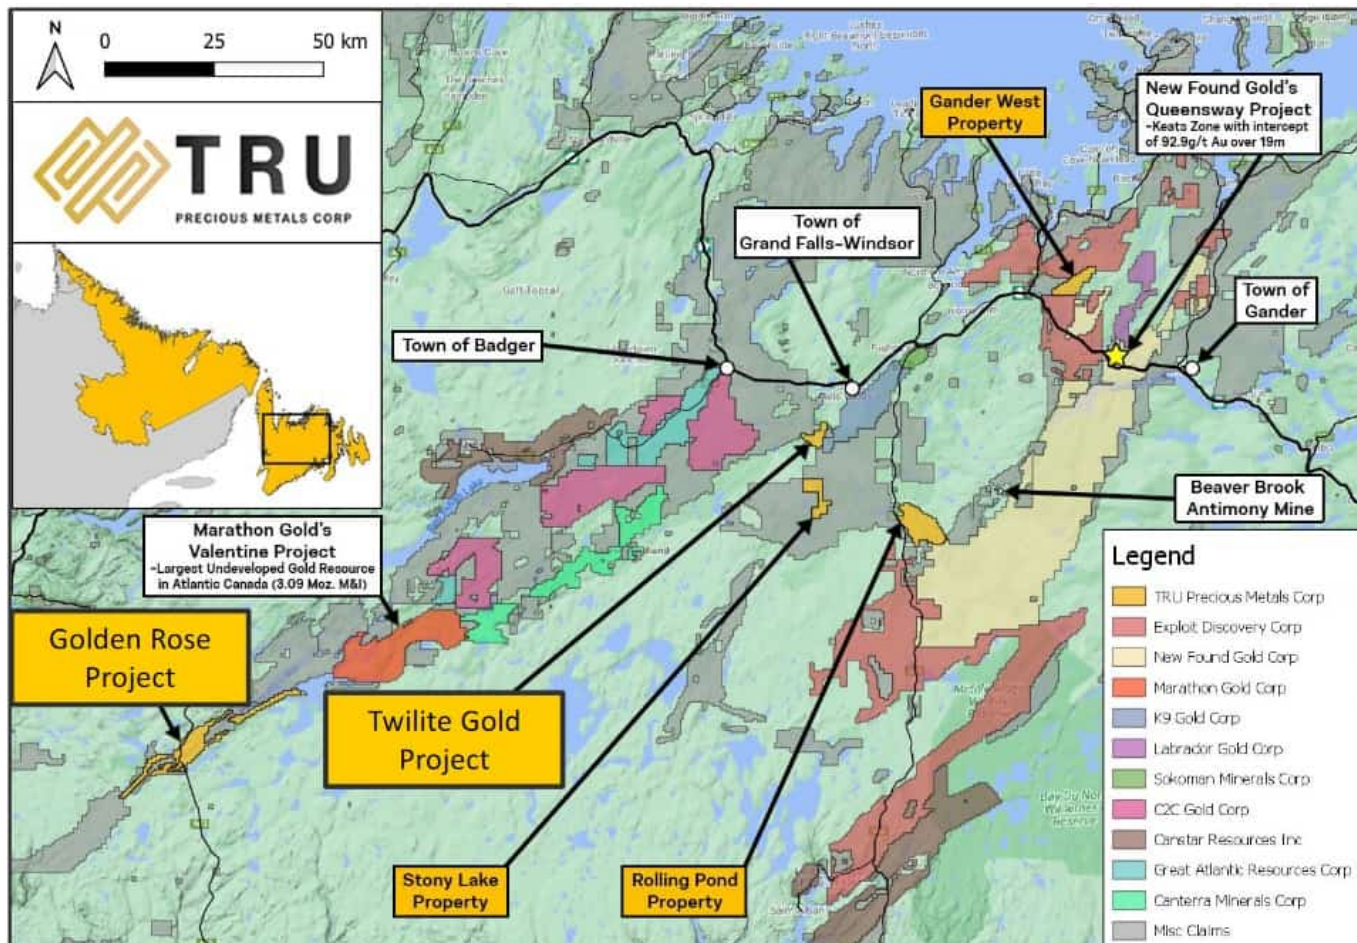

Newfoundland in Canada is currently experiencing a gold rush, despite having mining operations since the 1770s. Newfoundland and Labrador ranked eighth globally in overall investment attraction in the most recent Fraser Institute Annual Survey of mining companies.

The Newfoundland excitement began in early 2020 when New Found Gold Corp. announced a discovery of 92.86 g/t gold over 19m

(included 285.2 g/t Au over 6.0 meters). Anything over 5 g/t is considered high grade. Since then numerous junior miners have flocked to Newfoundland to stake their claim. One Company was early enough to claim a massive 23,000 hectares of land in the highly prospective Central Newfoundland Gold Belt, with one of their projects virtually next door to Marathon Gold Corp.'s Valentine Project (P&P reserves of 1.87 million oz Au & and M&I 3 million oz Au) and another one adjacent to New Found Gold's Project.

The Company is TRU Precious Metals Corp. (TSXV: TRU | OTCQB: TRUIF) ("TRU"). TRU is a relatively new gold exploration company that has assembled a portfolio of 5 gold exploration properties (23,000 hectares) in the highly prospective Central Newfoundland Gold Belt. All projects are either 100% owned or with an option to purchase 100%. TRU's flagship Golden Rose Project lies just near the Valentine Project which holds the largest undeveloped gold resource in Atlantic Canada.

## TRU Precious Metals Corp.'s fully-funded summer (June-August) 2021 exploration program is now underway

Having successfully raised \$3.5 million in May 2021, TRU has now begun a fully-funded exploration campaign across four of their Newfoundland projects – namely Golden Rose, Twilite Gold, Gander West, and Rolling Pond.

Perhaps Golden Rose holds the greatest promise due to its premier location between the successful Marathon Gold Corp.'s Valentine Gold Project and Matador Mining's Cape Ray Gold Project. TRU will embark on a multi-phase exploration program throughout the remainder of 2021 to further delineate the known areas of gold mineralization and test new zones. Highlights of recently uncovered gold occurrences (by the previous owners) which have yet to be tested by TRU include Rose Gold, Jacob's Pond and Jen's Pond. At Rose Gold original

grab samples assayed 18.8 g/t Au and 7.2 g/t Au and follow up prospecting in 2019 returned a 20.2 g/t Au sample. By sometime in Q3 2021, TRU plans to do a 5,000 metre diamond drill program at Golden Rose.

Announced on June 1, 2021, TRU has commenced a minimum Phase one 1,200-metre drill program at its 100% owned Twilite Gold Project. Interestingly just a week later the drill program was doubled to “up to approximately 2,500 meters“. It is a bit early yet to get excited, however, TRU Co-Founder, President, and CEO, Joel Freudman, sounds super excited about the companies chances, as you can view here in an exclusive interview with InvestorIntel titled “Joel Freudman on TRU Precious Metals and the ‘once-in-a-lifetime modern day gold rush’ in Newfoundland.” CEO Joel stated: “We are in a once-in-a-lifetime modern day gold rush...happening right now in Newfoundland Canada....We are in it to win it.”

TRU state in the news release (regarding the upcoming drilling at the Twilite Gold Project):

“The drill target was previously identified by TRU during a detailed ground geophysical survey in November of 2020....Twilite Gold is strategically located on the mapped extension of the Cape Ray-Valentine Lake Shear Zone. Numerous advanced-stage gold exploration projects are currently underway along this district-scale shear zone, including Marathon Gold’s multi-million-ounce deposit at Valentine Lake, and Matador Mining’s Cape Ray deposit.”

**TRU Precious Metals Corp.’s Twilite Gold Project where up to 2,500 metres of drilling is commencing in June 2021**

# TWILITE GOLD PROJECT

The Twilite Gold Project is located along a structural corridor with other gold deposits such as Cape Ray and Valentine Lake

**202 g/t Au  
grab sample**

in a zone of quartz veining & silification

65 units covering 1,625 hectares  
Shares many characteristics with Sokoman Minerals' high-grade Moosehead Gold Project located ~30 km northeast.

Possession of historical exploration results bodes well for future exploration or resale opportunities

## Closing remarks

TRU Precious Metals Corp. trades on a market cap of C\$19.7 million with the stock up 114% in the past year. With exploration moving into top gear now over the Canadian summer it looks to be a good time to consider a position in TRU Precious Metals Corp. A large gold find would get CEO Joel even more excited and potentially be a big positive for early stage investors. Fingers crossed and stay tuned for drill results in the coming months.
