

Dr. Spencer on a rising uranium market?

written by InvestorNews | June 26, 2018

June 26, 2018 – “The uptick has been in the last couple of weeks. There is a certain excitement in the market. It started late last year with Cameco and the Kazaks taking almost 15% of world production off the market. Since then there have been a couple of other transactions that have taken about 30% of uranium supply off the market. The market is just starting to react. For the first time we are starting to see an uptick in the uranium price that I think is going to be sustainable.” States Dr. Richard Spencer, CEO, President and Director of [U308 Corp.](#) (TSX: UWE | OTCQB: UWEFF), in an interview with InvestorIntel Corp. CEO Tracy Weslosky.

Tracy Weslosky: Richard, I was noticing, when we were doing some analysis this last week, what seems to be an uptick of interest in uranium. I think you had mentioned to me previously that you have seen a turnaround happen over the last several months. Can you talk to us about this?

Richard Spencer: Tracy it is less than that. The uptick has been in the last couple of weeks. There is a certain excitement in the market. It started late last year with Cameco and the Kazaks taking almost 15% of world production off the market. Since then there have been a couple of other transactions that have taken about 30% of uranium supply off the market. The market is just starting to react. For the first time we are starting to see an uptick in the uranium price that I think is going to be sustainable.

Tracy Weslosky: Why? We have waited 4 or 5 years. I have been a closeted uranium bull. Actually, I have not been that big of a

closeted uranium bull. Why now? We know there is a shortage for uranium. Why recently? It is a geopolitical issue or what is making this happen?

Richard Spencer: I think part of it is a geopolitical thing. I think the U.S. is recognizing that it imports 93% of its uranium. We are starting to hear the U.S. talk about the strategic side of its power grid needing reliable baseload power without increasing the carbon footprint. It is reliability of the power that is driving that move in the U.S. and Trump's administration is saying, hey we need reliable power in this country and we cannot have these nuclear power stations shutting down. Bellefonte, they just got approval to go ahead with the construction of their power plant or continue with the power plant in the U.S., which it is just huge news...to access the complete interview, [click here](#)
