

I-Minerals – “A gold mine without the gold”

Thomas Conway, President, CEO and Director of I-Minerals Inc. (TSXV: IMA | OTCQB: IMAHF) (“I-Minerals”) in an interview with InvestorIntel Senior Editor Jeff Wareham discuss their fully permitted Bovill Kaolin industrial minerals project in Idaho. The Bovill Kaolin project features the industrial minerals halloysite, kaolin, metakaolin, K-Spar, and quartz. Thomas points out, though not everyone may know what these minerals are used for, we do use them in a variety of ways in our everyday life. In fact, the German Institute of Diabetes, in partnership with the company DURTEC GmbH have been using I-Minerals’ Ultra Hallopure Halloysite, as a key ingredient to develop a state of the art wound treatment cloth – investors can expect to hear more on this in the coming months. As there is limited information available in regards the value of industrial minerals, Thomas recommends investors review the publicly listed company Imerys SA, to get a feel for how lucrative their industry is and how much money there is to be made. In a closing thought, Thomas states I-Minerals is a “Gold mine without the gold.” ...to access the complete interview, [click here](#)
